Introduces students to the richness of Senegalese culture and history, from the eleventh century to the twenty first century. Through lectures, readings, music, and film students will examine Senegal's culture and customs. In some years there will be a travel component connected with the class.

Term:

Offered Spring Term

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- HST-396 The African Diaspora

Credits:

4.00

Description:

Examines the global dispersion of African people outside of the African continent. The history and culture of African descendant people and their communities in the Americas, Europe, and Asia will be included.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Cultural Diversity Opt A

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Black Studies

Black Studies is an interdisciplinary program that provides students with the opportunity to critically examine the black experience in relationship to both historical and contemporary issues that have shaped and continue to shape the various communities they are a part of: neighborhoods, cities, states, nations, and the world.

There is no major available in Black Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Minor Requirements**
- **Black Studies Courses**

  - **BLKST-100 Introduction to Black Studies I: Survey of the Discipline**

    **Credits:**

    4.00

    **Description:**

    Introduces students to the basic concepts, literature and interdisciplinary nature of Black Studies. Provides a conceptual framework for the investigation and analysis of black history and culture as well.

    **Term:**

    Occasional

    **Type:**

    Humanities & History, Humanities Literature Requirement

  - **BLKST-101 Introduction to Black Studies II Research and Writing**

    **Credits:**

    4.00

    **Description:**
Introduces students to basic research techniques and methods in Black Studies including library use, identifying resources, project development, documenting sources, and writing research papers.

Term:
Occasional

Type:
Social Science

• BLKST-225 West African History Through Film and Literature

Credits:
4.00

Description:
Examines the history and culture of West Africa through its portrayal in literature and film. The specific countries that will be focused on are Senegal, Mali, Burkina Faso, Ghana and Nigeria. This class will also recognize the fact that borders are a modern, man-made element of the West African landscape serving to both separate people who have historically and traditionally seen themselves as connected, and to bring together people into a nation who have historically and traditionally seen themselves as distinct from one another.

• BLKST-226 The African American Experience in Literature and Film

Credits:
4.00

Description:
Using literature and film to present aspects of the African American experience in the United States. By using film and literature it is possible to present the broad range of cultural styles, regional variations, class differences, gender issues, family structures and multiple viewpoints that make up the African American experience. Through lectures and in-class presentations a historical context will be provided for each of the films or texts that are used during the semester.

• BLKST-227 Eyes on the Prize: Civil Rights Movement of the 20th Century

Credits:
4.00

Description:
Using the documentary series, Eyes on the Prize, a History of the Civil Rights Movement, the class will present the history of the Civil Rights Movement in the United States during the 20th century. Each week of the class will be focused around one of the 14 parts of the series. The presentation of the film segment will be accompanied by readings of texts, articles and documents.
• BLKST-228 African American Experience and Public History in the U.S.

Credits:

4.00

Description:

Examines the way that African American history is presented through public history in the United States. This exploration will include monuments, memorials and historic sites that both focus on the African American experience and examine how they fit into the context of American history. Time will also be given to look at the use of films, architecture and archaeology. This will be done through reading texts, viewing of films and visiting local historic sites that explore public history and the African American experience from various geographical perspectives.

• BLKST-250 Haiti, Guadalupe and Martinique

Credits:

4.00

Description:

This course explores the rich intellectual tradition of Haiti, Guadeloupe, and Martinique by considering historical moments linked to colonialism, the abolition of slavery, the representation of gender, departmentalization, and decolonization through essays, films, poems, novels, and short stories by critics and writers from the 19th-21st centuries.

Type:

Diverse Perspectives

• BLKST-263 Sabar: Music and Dance

Credits:

4.00

Description:

Introduces participants to the sabar music and dance tradition of Senegal through a study of music, dance, language and history. Taught by professional practitioners of the sabar tradition, students will develop a sense of how music and dance are used in both traditional and popular contexts. This course will be directed by Prof. Robert A. Bellinger.

Type:

Cultural Diversity Opt B,Social Science

• BLKST-469 Research Seminar: African American Life in Slavery and Freedom- Reconstruction and the Freedman's Bureau
Introduces students to the Reconstruction era in American history, and uses Reconstruction as a bridge to look at enslavement, which preceded the era, and the issue of freedom during, and after the era. In the first half of the class students read from texts that will provide them with an understanding of slavery, emancipation and reconstruction. The second half of the class will utilize on-line collections of the Freedman's Bureau Papers to allow students to use documents to deepen their understanding of the Reconstruction era. The class will also provide a comparative approach by considering questions of citizenship in the 19th century for people of African descent in the United States, Latin America and the Caribbean. This course is identical to HST 469.

**Term:**
Occasional

**Type:**
Social Science

- **BLKST-510 Independent Study in Black Studies**

  **Prerequisites:**
  
  An independent study form must be submitted to the CAS Dean's Office.

  **Credits:**
  
  4.00

  **Description:**
  
  Independent study in Black Studies
2016-2017 Archived Catalog Information

Chemistry

The Chemistry & Biochemistry Department offers a Chemistry major and minor. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Chemistry Courses

Major Requirements: 17 courses, 62-68 credits

The curricula for the BA and BS degrees in Chemistry may satisfy the requirements for certification by the American Chemical Society. Students in the College of Arts & Sciences must fulfill all general requirements for their chosen degree in addition to specific major requirements.

Core Requirements (16 courses and corresponding laboratories where applicable, 58-64 credits)

- CHEM-111 General Chemistry I

  Prerequisites:

  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

  Credits:

  3.00

  Description:

  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

  Term:
Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• CHEM-L111 General Chemistry Laboratory I

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Both Fall and Spring
**CHEM-L112 General Chemistry Laboratory II**

**Prerequisites:**

MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

**Credits:**

1.00

**Description:**

This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

**Term:**

Offered Both Fall and Spring

**CHEM-211 Organic Chemistry I**

**Prerequisites:**

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

**Credits:**

3.00

**Description:**

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

**Term:**

Offered Both Fall and Spring

**CHEM-L211 Organic Chemistry Laboratory I**
Prerequisites:
CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

Credits:
1.00

Description:
Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:
Offered Both Fall and Spring

- CHEM-212 Organic Chemistry II
  Prerequisites:
  CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.
  
  Credits:
  3.00
  
  Description:
  Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.
  
  Term:
  Offered Both Fall and Spring

- CHEM-L212 Organic Chemistry Laboratory II
  Prerequisites:
  CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.
  
  Credits:
  1.00
  
  Description:
  Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.
- **CHEM-314 Instrumental Analysis**

  Prerequisites:
  
  CHEM 211; CHEM L314 must be taken concurrently.

  Credits:
  
  3.00

  Description:
  
  Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.

  Term:
  
  Offered Both Fall and Spring

- **CHEM-L314 Instrumental Analysis Laboratory**

  Prerequisites:
  
  CHEM L211; CHEM 314 must be taken concurrently

  Credits:
  
  1.00

  Description:
  
  Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

  Term:
  
  Offered Fall Term

- **CHEM-331 Biochemistry I**

  Prerequisites:
  
  CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

  Credits:
Description:

Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and bioinformatics techniques.

Term:

Offered Fall Term

- **CHEM-L331 Biochemical Techniques Lab**

  Prerequisites:

  CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

  Credits:

  1.00

  Description:

  Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

  Term:

  Offered Fall Term

- **CHEM-375 Advanced Inorganic Chemistry**

  Prerequisites:

  CHEM 314/L314

  Credits:

  3.00

  Description:

  Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, or organometallics.

  Term:

  Offered Every Other Year
• CHEM-L375 Advanced Inorganic Laboratory

Prerequisites:

CHEM 375 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required.

Term:

Offered Every Other Year

• CHEM-411 Physical Chemistry I

Prerequisites:

CHEM 112; MATH 166;

Credits:

3.00

Description:

Principles of thermodynamics and its general applications to physical and chemical change; introduction to the kinetic theory of gases and concepts of statistical mechanics.

Term:

Offered Fall Term

• CHEM-L411 Physical Chemistry Laboratory I

Prerequisites:

CHEM 411 must be taken concurrently

Credits:

1.00

Description:

Laboratory exercises covering classical experiments in thermodynamic and instrumental measurements. Significant emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated by laboratory reports prepared in the professional style.
• CHEM-412 Physical Chemistry II

Prerequisites:
CHEM 411

Credits:
3.00

Description:
Applications of thermodynamics to solutions, chemical equilibrium and electrochemistry; chemical kinetics will be covered. Quantum chemistry and the application of spectroscopy to molecular structure.

Term:
Offered Fall Term

• CHEM-L412 Physical Chemistry Laboratory II

Prerequisites:
CHEM L411; CHEM 412 must be taken concurrently.

Credits:
1.00

Description:
Laboratory exercises using spectroscopic techniques (optical and electrochemical) to explore kinetic and thermodynamic and quantum mechanical properties of chemical systems. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style.

Term:
Offered Spring Term

• CHEM-428 Research & Seminar I

Prerequisites:
CHEM 212; CHEM L212; Instructor's Consent required

Credits:
Description:

First of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a research report and poster presentation to the department are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:

Offered Fall Term

Type:

Expanded Classroom Requirement

- CHEM-429 Research & Seminar II

Prerequisites:

CHEM 212 and CHEM L212 and instructor's consent required

Credits:

1.00- 4.00

Description:

Second of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a final research report and oral presentation to the department and the SU community are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement

- MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00
Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications(curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:
MATH-164 or MATH-165 with a minimum grade of C

Credits:
4.00

Description:
Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-265 Calculus III

Prerequisites:
MATH 166 with grade of C or better

Credits:
4.00

Description:
Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• PHYS-151 University Physics I

Prerequisites:
MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:
3.00

Description:
Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-L151 University Physics Lab I

  Prerequisites:
  PHYS 151 concurrently

  Credits:
  1.00

  Description:
  The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

  Term:
  Offered Both Fall and Spring

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-152 University Physics II

  Prerequisites:
  PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

  Credits:
  3.00

  Description:
This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-L152 University Physics Lab II

Prerequisites:
PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:
1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

Elective Requirements (1 lecture course and 1 lab, 4 credits)
Students are required to take one course of in-depth study, with an additional credit of laboratory. These courses are not offered every year, and careful consultation with an academic advisor is recommended.

Choose one of the following applicable lecture courses:

• CHEM-332 Biochemistry II

Prerequisites:
CHEM 331 and CHEM-L332 concurrently

Credits:
Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.

Term:
Offered Spring Term

• **CHEM-355 Environmental Chemistry**

  Prerequisites:
  
  CHEM 211, or permission of instructor

  Credits:
  3.00

  Description:
  
  A study of the chemical processes (including biologically mediated ones) that affect the cycling and ultimate fate of chemicals in the environment. Topics include air, water, and soil chemistry as well as energy and climate change. The effects of pollutant loads on natural systems and the remediation and treatment methods used to minimize pollutant loads are investigated. 3 hour lecture. Normally offered spring, odd numbered years.

  Term:
  Alternates Fall & Spring

• **CHEM-390 Advanced Organic Chemistry**

  Prerequisites:
  
  Prerequisite: CHEM 212.

  Credits:
  3.00

  Description:
  
  Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules.

  Term:
  Alternates Fall & Spring
CHEM-453 Introduction to Toxicology

Prerequisites:
CHEM-331 or instructor's consent

Credits:
3.00

Description:
The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and target organ toxicity. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology.

Term:
Offered Every Other Year

To satisfy the requirement for the one credit laboratory, students may either take the laboratory associated with the lecture course, when offered, or use one credit of independent study or senior research, which are variable credit courses.

Choose one of the following applicable laboratory courses:

- CHEM-428 Research & Seminar I

  Prerequisites:
  CHEM 212; CHEM L212; Instructor's Consent required

  Credits:
  1.00-4.00

  Description:
  First of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a research report and poster presentation to the department are required elements. Depending on the project undertaken, students may obtain ECR credit.

  Term:
  Offered Fall Term

  Type:
  Expanded Classroom Requirement
CHEM-429 Research & Seminar II

Prerequisites:
CHEM 212 and CHEM L212 and instructor's consent required

Credits:
1.00-4.00

Description:
Second of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a final research report and oral presentation to the department and the SU community are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:
Offered Spring Term

Type:
Expanded Classroom Requirement

CHEM-510 Independent Study

Prerequisites:
An independent study form must be submitted to the CAS Dean's Office.

Credits:
1.00-4.00

Description:
Advanced study of a special topic in chemistry, by arrangement with the chemistry faculty.

Note: CHEM-428 and CHEM-429 are variable credit courses (1-4 credits are awarded based on coursework). If a student elects to take more than 1 credit of each course the additional credit may be applied to the elective laboratory requirement. Please discuss this possibility with your advisor before registering for these courses. Students using CHEM-428 or CHEM-429 to satisfy the Chemistry elective laboratory requirement must take a total of three credits of CHEM-428 and CHEM-429 in order to satisfy the American Chemical Society Certification Requirements.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Chemistry

The Chemistry & Biochemistry Department offers a Chemistry major and minor. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Chemistry Courses

Minor Requirements: 6 courses and corresponding laboratories where applicable, 24 credits

Core Requirements (4 courses and corresponding laboratories, 16 credits)

- CHEM-111 General Chemistry I

  Prerequisites:

  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

  Credits:

  3.00

  Description:

  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

  Term:

  Offered Both Fall and Spring

  Type:
• CHEM-L111 General Chemistry Laboratory I

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATH-166 MATH-167 MPEL1
MATH-168 MPEL2 or MATH-169 MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS
CHEM-L112 General Chemistry Laboratory II

Prerequisites:

MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

CHEM-211 Organic Chemistry I

Prerequisites:

CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:

3.00

Description:

Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

Term:

Offered Both Fall and Spring

CHEM-L211 Organic Chemistry Laboratory I

Prerequisites:

CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.
Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:
Offered Both Fall and Spring

**CHEM-212 Organic Chemistry II**

Prerequisites:
CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:
3.00

Description:
Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:
Offered Both Fall and Spring

**CHEM-L212 Organic Chemistry Laboratory II**

Prerequisites:
CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:
1.00

Description:
Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:
Offered Both Fall and Spring
Electives (2 courses, 8 credits)

Choose two CHEM electives at the 200-level or higher, of which at least one credit is a laboratory

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

- Major Requirements
- Minor Requirements
- Honors
- Chemistry Courses

To be eligible for departmental honors, students must minimally have an overall GPA of 3.5 or higher and a major GPA of 3.5 or higher upon enrollment in the appropriate capstone course. In addition, students seeking departmental honors must submit an application to the departmental honors subcommittee for pre-approval early in the academic year in which students plan to complete the capstone research project; approved honors thesis work is then coupled to the capstone course requirements. Upon completion of the capstone course requirements, the departmental honors subcommittee, along with the faculty of the department, will determine whether the application and the final research project qualify for departmental honors.

For departmental honors, thesis work must be of outstanding quality and must involve original independent laboratory or field research and/or in-depth analysis. For example, students may complete a project in the lab or one that requires data analysis. Job shadowing, data collection/organization (without analysis), or research summaries will generally not be sufficient for consideration. It is recommended that students eligible and interested in the departmental honors pathway begin looking for and meeting with their capstone project advisor as early as possible and request the departmental honors application from the department chair.
2016-2017 Archived Catalog Information
Chemistry

The Chemistry & Biochemistry Department offers a Chemistry major and minor. Through a wide variety of laboratory-based courses and opportunities for independent research with faculty, the department provides students with the tools that will allow them to achieve success in their field while learning in the heart of one of the most scientifically progressive cities in the world.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Chemistry Courses

• CHEM-101 Chemical Concepts Contemporary Issues I

  Credits:
  3.00

  Description:
  No longer offered. Principles of chemistry with illustrations from everyday life. Basic chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the Science requirement when taken with CHEM 102, L101, L102. May not be used by science majors for science credit. Concurrent enrollment in CHEM L101 required. 3 hours lecture. 1 term - 3 credits. Normally offered Fall/Summer I.

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L101 Chemical Concepts Contemporary Issues Lab I

  Prerequisites:
  Must be taken concurrently with CHEM 101

  Credits:
No longer offered. Principles of chemistry and its applications demonstrated through experimentation. Experiments may include field testing and analysis of ocean and river water, testing of household products and sunscreens, determination of calorie content of foods, and molecular modeling with computers. May not be used by science majors for science credit. 2-hour laboratory. Normally offered Fall/Summer I.

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-102 Chemical Concepts Contemporary Issues II**

  Prerequisites:
  
  It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM L102

  Credits:
  
  3.00

  Description:
  
  No longer offered. A continuation of CHEM 101, including topics in organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science. Basic Chemical concepts are used to decode consumer product labels and form a basis for understanding contemporary issues. Specifically designed to satisfy the science requirement. May not be used by science majors for science credit. Prerequisite: CHEM 101, CHEM 111 or pre-college chemistry. 3 hours lecture. Normally offered Spring/Summer II.

  Type:
  
  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L102 Chemical Concepts Contemporary Issues Lab II**

  Prerequisites:
  
  It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level. Must be taken concurrently with CHEM 102

  Credits:
  
  1.00

  Description:
  
  No longer offered. A continuation of CHEM L101. Experiments may include making plastics and drug products, analyzing food products, making a model of DNA, crime lab analysis procedures, making aspirin, and the study of flavors and fragrances using molecular models. Concurrent enrollment in CHEM 102 required. May not be used
by science majors for science credit. Prerequisites: CHEM 101 and CHEM L101. 2-hour Laboratory. 1 term - 1 credit. Normally offered Spring/Summer II.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-103 Chemical Concepts Contemporary Issues IIA**

  Prerequisites:

  It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

  Credits:

  4.00

  Description:

  No longer offered. Topics include organic chemistry, biochemistry, polymer chemistry, ecology, air and water pollution, food and food additives, pharmaceuticals, and forensic science, with an emphasis on their application to current issues. Specifically designed to satisfy the non-laboratory science requirement for the B.A. degree. Science related information searches and writing assignments will be based on current topics from the semester's work. 3 hours lecture. It is strongly recommended that students enrolling in this course have some acquaintance of basic chemical principles either on the college or the pre-college level.

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ

- **CHEM-105 Chemical New Product Development**

  Prerequisites:

  ENT 101

  Credits:

  4.00

  Description:

  This course addresses the crucial intersection between chemistry and business, and the impact of these fields on society. It provides an introduction to important chemistry concepts and practices of business management. Primary focus is on understanding the chemistry principles behind some of the consumer products in our everyday lives, and using this knowledge to create and evaluate ideas for new products. The course also introduces the business aspects involved in the development and marketing of new products. An important component of the course is in making effective presentations; this component concludes the course, culminating in team presentations of a new chemical product to panel of executives and peers. This course satisfies the Sawyer Business School Science requirement.

  Type:
• CHEM-106 Biotechnology & Its Applications in Medicine, Agriculture, Law

Credits:
4.00

Description:
Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:
SCI TECH ENGNR

• CHEM-H106 Biotechnology & Its Applications in Medicine, Agriculture, Law

Credits:
4.00

Description:
Introduces the latest discoveries and applications of biotechnology. Topics include genetically modified food, stem cells, genetic testing, cloning, and forensics. A combination of lectures, discussions, short documentaries, mock congressional hearings, and hands-on activities will provide insight into the numerous medical, social, legal, and ethical issues surrounding this technology.

Type:
SCI TECH ENGNR,Honors

• CHEM-111 General Chemistry I

Prerequisites:
Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:
3.00

Description:
Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those
considering careers in the health sciences.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• CHEM-L111 General Chemistry Laboratory I

Prerequisites:
MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:
1.00

Description:
Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• CHEM-112 General Chemistry II

Prerequisites:
CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:
3.00

Description:
This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.
CHEM-L112 General Chemistry Laboratory II

Prerequisites:
MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:
1.00

Description:
This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

CHEM-211 Organic Chemistry I

Prerequisites:
CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

Credits:
3.00

Description:
Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.
• CHEM-L211 Organic Chemistry Laboratory I
  Prerequisites:
  CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.
  
  Credits:
  1.00
  
  Description:
  Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.
  
  Term:
  Offered Both Fall and Spring

• CHEM-212 Organic Chemistry II
  Prerequisites:
  CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.
  
  Credits:
  3.00
  
  Description:
  Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.
  
  Term:
  Offered Both Fall and Spring

• CHEM-L212 Organic Chemistry Laboratory II
  Prerequisites:
  CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.
  
  Credits:
  1.00
  
  Description:
Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:
Offered Both Fall and Spring

• CHEM-314 Instrumental Analysis

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.

Term:
Offered Fall Term

• CHEM-L314 Instrumental Analysis Laboratory

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

Term:
Offered Fall Term

• CHEM-331 Biochemistry I

Prerequisites:
CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:
3.00

Description:
Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and bioinformatics techniques.

Term:
Offered Fall Term

- CHEM-L331 Biochemical Techniques Lab

  Prerequisites:
  CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

  Credits:
  1.00

  Description:
  Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

  Term:
  Offered Fall Term

- CHEM-332 Biochemistry II

  Prerequisites:
  CHEM 331 and CHEM-L332 concurrently

  Credits:
  3.00

  Description:
  Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.
• CHEM-L332 Advanced Biochemical Techniques and Research Lab

Prerequisites:

CHEM 331/L331. CHEM 332 must be taken concurrently.

Credits:

1.00

Description:

Advanced biochemistry laboratory course where students learn experimental design and critical analysis of the scientific literature while conducting novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and quantitation of DNA and proteins, protein detection, enzyme kinetics, and bioinformatics. Research is presented as a poster at the annual STEM banquet.

Term:

Offered Spring Term

• CHEM-355 Environmental Chemistry

Prerequisites:

CHEM 211, or permission of instructor

Credits:

3.00

Description:

A study of the chemical processes (including biologically mediated ones) that affect the cycling and ultimate fate of chemicals in the environment. Topics include air, water, and soil chemistry as well as energy and climate change. The effects of pollutant loads on natural systems and the remediation and treatment methods used to minimize pollutant loads are investigated. 3 hour lecture. Normally offered spring, odd numbered years.

Term:

Alternates Fall & Spring

• CHEM-L355 Environmental Chemistry Lab

Prerequisites:

CHEM 355 must be taken concurrently. Take CHEM-L211;
Laboratory exercises designed to illustrate principles covered by topics in CHEM 355. Prerequisites: CHEM L211, concurrent enrollment in CHEM 355 required. 4-hour laboratory. Normally offered spring, odd numbered years.

Term:

Alternates Fall & Spring

- **CHEM-375 Advanced Inorganic Chemistry**

  Prerequisites:

  CHEM 314/L314

  Credits:

  3.00

  Description:

  Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, or organometallics.

  Term:

  Offered Every Other Year

- **CHEM-L375 Advanced Inorganic Laboratory**

  Prerequisites:

  CHEM 375 must be taken concurrently

  Credits:

  1.00

  Description:

  Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required.

  Term:

  Offered Every Other Year
• CHEM-390 Advanced Organic Chemistry

  Prerequisites:

  Prerequisite: CHEM 212.

  Credits:

  3.00

  Description:

  Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth
discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules.

  Term:

  Alternates Fall & Spring

• CHEM-411 Physical Chemistry I

  Prerequisites:

  CHEM 112; MATH 166;

  Credits:

  3.00

  Description:

  Principles of thermodynamics and its general applications to physical and chemical change; introduction to the
kinetic theory of gases and concepts of statistical mechanics.

  Term:

  Offered Fall Term

• CHEM-L411 Physical Chemistry Laboratory I

  Prerequisites:

  CHEM 411 must be taken concurrently

  Credits:

  1.00

  Description:

  Laboratory exercises covering classical experiments in thermodynamic and instrumental measurements.
Significant emphasis will be placed on experimental design and data analysis skills in addition to technical writing
skills as demonstrated by laboratory reports prepared in the professional style.
• CHEM-412 Physical Chemistry II

Prerequisites:
CHEM 411

Credits:
3.00

Description:
Applications of thermodynamics to solutions, chemical equilibrium and electrochemistry; chemical kinetics will be covered. Quantum chemistry and the application of spectroscopy to molecular structure.

Term:
Offered Spring Term

• CHEM-L412 Physical Chemistry Laboratory II

Prerequisites:
CHEM L411; CHEM 412 must be taken concurrently.

Credits:
1.00

Description:
Laboratory exercises using spectroscopic techniques (optical and electrochemical) to explore kinetic and thermodynamic and quantum mechanical properties of chemical systems. Emphasis will be placed on experimental design and data analysis skills in addition to technical writing skills as demonstrated through reports prepared in the professional style.

Term:
Offered Spring Term

• CHEM-428 Research & Seminar I

Prerequisites:
CHEM 212; CHEM L212; Instructor's Consent required

Credits:
Description:
First of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a research report and poster presentation to the department are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:
Offered Fall Term

Type:
Expanded Classroom Requirement

• CHEM-429 Research & Seminar II

Prerequisites:
CHEM 212 and CHEM L212 and instructor's consent required

Credits:
1.00- 4.00

Description:
Second of a senior level, two-semester sequence of independent study under the supervision of faculty. Students may opt to conduct experimental research, proposal development, or literature review. Students desiring departmental honors and/or an ACS-accredited degree must conduct authentic research; consult with the course instructor. Development of a final research report and oral presentation to the department and the SU community are required elements. Depending on the project undertaken, students may obtain ECR credit.

Term:
Offered Spring Term

Type:
Expanded Classroom Requirement

• CHEM-L432 Advanced Biochemistry Research Laboratory

Prerequisites:
CHEM-331; CHEM-L331

Credits:
3.00
Description:
No longer offered. Laboratory course where students apply the use of biochemical techniques acquired in Biochemical Techniques I (CHEM L331) to conduct novel research. Projects vary from year to year, but may include recombinant DNA techniques, purification and characterization of DNA and proteins, and bioinformatics. Emphasis on experimental design, data interpretation, analysis of the scientific literature, and writing. Includes field trip to local research university or biotechnology/pharmaceutical laboratory.

Term:
Alternates Fall & Spring

Type:
Expanded Classroom Requirement

• CHEM-453 Introduction to Toxicology

Prerequisites:
CHEM-331 or instructor's consent

Credits:
3.00

Description:
The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and target organ toxicity. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology.

Term:
Offered Every Other Year

• CHEM-510 Independent Study

Prerequisites:
An independent study form must be submitted to the CAS Dean's Office.

Credits:
1.00- 4.00

Description:
Advanced study of a special topic in chemistry, by arrangement with the chemistry faculty.
2016-2017 Archived Catalog Information

Classics

Students will focus on the foundational texts and artistic expressions of the Greco-Roman and Judeo-Christian traditions in order to discover the qualities that make these works enduring in relevance.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements

Minor Requirements: 5 courses, 20 credits

Courses will be selected from the electives below. Students must take courses from at least two of the participating departments. Cross-listed courses can only be counted for credit in one department. No more than 8 credits may double-count for credit in the student’s major or toward another minor.

Choose five of the following:

- **ARH-305 Art of Greece and Rome**

  Credits:

  4.00

  Description:

  Examines the civic, religious, and domestic art and architecture of the Ancient Mediterranean cultures of Greece and Rome. Considers temples, forums, basilicas, city planning, sculpture, pottery, wall painting, mosaics, and engineering achievements in their cultural contexts.

  Term:

  Occasional

  Type:

  BFA Humanities Requirement, Humanities & History, Humanities Literature Requirement

- **ENG-123 Great Books of the World I Great Books of World Lit. I**

  Credits:
Description:

Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Diverse Perspectives

• ENG-316 Fifth Century Athens

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An introduction to Periclean Athens, the golden age of classical Greek literature and thought. Close readings of selections from the historians Herodotus and Thucydides, the dramatists Aeschylus and Euripides, the poetry of Pindar, and Plato's great work on politics, The Republic. Cross-listed with History 336.

Term:

Occasional

• ENG-317 Classical Mythology

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

Ancient Greek and Roman myths, their motifs, themes and interpretations. Normally offered every third year.

• ENG-408 Modern Greek Literature in English Translation
Prerequisites:
WRI-102 or WRI-H103 with a minimum grade of B+

Credits:
4.00

Description:
A survey of writings in Modern Greek from 1821 to the present exploring Hellenism and the Greek cultural identity. Authors studied will include Kostis Palamas, Georgios Vizyinos, Alexandros Papadiamantis, Stratis Myrivilis, Photis Kontoglou, Dido Sotiriou, George Seferis, Constantine Cavafy, and Odysseas Elytis. A section of the syllabus will be reserved for the Greek-American/diaspora writers Helen Papanikolas, Elia Kazan, Jeffrey Eugenides, Olga Broumas, and Tryfon Tolides. Films and music traditions will be sampled as well.

- **ENG-410 From Pagan Reason to Christian Revelation**
  
  Prerequisites:
  WRI-102 or WRI-H103
  
  Credits:
  4.00
  
  Description:
  A survey of major works of literature and thought crucial to the transformation of pagan models of reason to Christian systems of belief, including works by Plato and Plotinus, St. Augustine and Dante. Of central concern is the changing conception of love, from Eros to Agape. Cross-listed with History 336.
  
  Term:
  Occasional

- **ENG-490 Imperial Rome**
  
  Prerequisites:
  WRI-102 or WRI-H103
  
  Credits:
  4.00
  
  Description:
  This course offers an introduction to the Golden Age of Roman culture and power. Close readings of selections from major historians, poets, political thinkers, and philosophers will be examined in the context of Augustan Rome. Topics such as pietas, virtus, and gravitas, as well as the competing claims of public duty and private devotion, stoic maxim and erotic love lyric, will be discussed from the perspectives of writers such as Virgil, Livy,
Tacitus, Horace, Catullus, and Lucretius. Note: This course is identical to HUM 304. Normally offered in alternate years.

Type:

Humanities & History

**HST-101 History of Western Civilization I**

Credits:

4.00

Description:

Surveys European culture, politics, and society from antiquity to the seventeenth century. Topics include: the Greek, Judaic, and Roman heritage; the rise of Christianity; feudal society in the Middle Ages; Renaissance and Reformation; the Scientific Revolution; and the development of absolutist and constitutional governments.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

**PHIL-210 History of Ancient & Medieval Philosophy**

Credits:

4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

**PHIL-401 Ethics in Action 1: Persistence of the Classics**

Prerequisites:
PHIL-210, PHIL-211, 4 credits of a 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

Examines how classical works of ancient and medieval moral and political philosophy raise questions and themes that persist in challenges facing contemporary public policy and personal ethics. Topics covered will include the nature of moral duties, the connection between happiness and morality, citizenship and virtue, the meaning of a good life, the attractions and limitations of moral relativism, the foundations of legitimate government, arguments for and against democracy, realism and idealism in statecraft, and the relationship between law and ethics. Authors may include the Pre-Socratic thinkers, Plato, Aristotle, Cicero, Augustine, and Aquinas, among others.

Term:

Offered Fall Term

- PHIL-416 Plato: Profiles in Philosophy

Prerequisites:

Prerequisite: PHIL 210 or consent of instructor.

Credits:

4.00

Description:

A detailed study of Platonic texts and issues. Works studied will vary but will often include dialogues such as the Apology, Euthyphro, Phaedo, Republic, and Symposium. Themes may include, among others: the nature of philosophy and its relation to society; the dialogue form and the character of Socrates; the difference between truth and opinion; the meaning of virtue; justice and the ideal regime; the theory of forms and the nature of reality; love, death, and transcendence. Prerequisite: PHIL 210 or consent of instructor. 1 term ? 4 credits. Normally offered every third year.

- SF-174 Tragedy and Literature

Credits:

4.00

Description:

This course will focus on classic works of ancient and modern literature that examine the human condition from a tragic perspective. We will concentrate on close readings from the following texts: Homer's Iliad, Sophocles' Antigone, The Bhagavad-Gita, Shakespeare's Othello, Chekhov's short stories, and Joyce's Dubliners.
Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Computer Science

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Computer Science Courses

Major Requirements: 15 courses and corresponding laboratories where applicable, 54 credits

Computer Science Requirements (12 courses, 42 credits)

- CMPSC-F107 Ants, Rumors and Gridlocks

  Prerequisites:

  Math placement level of 2 or above or any MATH course at the level 100 or above

  Credits:

  4.00

  Description:

  Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

  Type:

  SCI TECH ENGNR, Quantitative Reasoning

- CMPSC-200 Introduction to Computer Science World
Prerequisites:
Freshman or Sophomore Standing

Credits:
1.00

Description:
Computer Science is a dynamic discipline and students are not typically exposed to its many facets during their first years in college while important foundation work is done. This module aims to change that by presenting several areas of recent interest. In this way, students can form an idea of the scope of the vast and rapidly growing subject and career options, and begin to map out steps toward a potential career path. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include data science, machine learning, social networks, and parallel computing and others. The course is intended to be taken freshman or sophomore year.

- **CMPSC-F131 Computer Science I**

  Credits:
  4.00

  Description:
  This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

  Type:
  Quantitative Reasoning

- **CMPSC-F132 Computer Science II**

  Prerequisites:
  CMPSC F131

  Credits:
  4.00

  Description:
  Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C
and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

Type:
Quantitative Reasoning

• CMPSC-F265 Data Structures & Algorithms

Prerequisites:

CMPSC F132

Credits:
4.00

Description:

Includes topics such as strings, stacks, queues, lists, trees, graphs, sorting, searching, hashing, dynamic storage allocation, and analysis of algorithms. Most programming will be done in the C language. Normally offered each semester.

Type:
Quantitative Reasoning

• CMPSC-F331 Object Oriented Programming

Prerequisites:

CMPSC-F265

Credits:
4.00

Description:

Object-Oriented Programming in C++ is taught using Trolltech's multi-platform Qt library and other open-source libraries and tools. Emphasis is placed on program design and code re-use. Topics include: encapsulation, inheritance and polymorphism, UML, refactoring, parent-child relationships, properties, event-driven programming, test cases, regular expressions, constraints, XML, design patterns, and graphical user interfaces. We deal with some operating system and programming environment issues and also with code packaging. C++ is a very large language, so we do not attempt to cover it all. Instead we work with a carefully selected subset of language elements that permits students to exploit the powerful Qt libraries and write robust, idiomatic, and interesting code. By the end of the course, the student should have a good command of C++, facility using and building libraries, an understanding and appreciation of the design patterns that we covered, and a well-established discipline of refactoring and code reuse. Prerequisite: CMPSC F265 (which may be taken concurrently). Normally offered each semester.

Type:
• CMPSC-F353 Architecture of Computer Systems

Prerequisites:

CMPSC F265.

Credits:

4.00

Description:

This course deals with the structure and operation of the major hardware components of a computer. Topics include basic logic design, basic datapath construction, basic pipelining, I/O system design, issues in memory hierarchy and network interface design. Normally offered each fall semester.

Type:

Quantitative Reasoning

• CMPSC-F355 Operating Systems

Prerequisites:

CMPSC F353 & CMPSC F265 and Working knowledge of C++.

Credits:

4.00

Description:

This course presents an overview of modern operating systems, from the points of view of an application developer and of a system developer. It covers process management, scheduling, concurrency management, multi-threading, memory management, and file system organization. Intensive programming assignments in the C language and in an assembly language help students to learn the POSIX application programming interface (API) and the low-level organization of a general-purpose operating system. Normally offered each spring.

Type:

Quantitative Reasoning

• CMPSC-F363 Intro to Database Systems

Prerequisites:

CMPSC 265 and MATH 285

Credits:
4.00

Description:

This is an introduction to the design and use of database systems --- systems that manage very large amounts of data. Topics covered include Entity-Relationship (E/R) data model, Relational data model, object-oriented model, and the conversion of E/R and relational models. We shall also learn some database languages, both concrete and abstract, including Structured Query Language (SQL), Object Query Language (OQL), relational algebra, etc. We will introduce the semistructured data, such as the popular Extensible Markup Language (XML), and their usage in database systems as well. The course is intended for computer science students who need to have an in-depth understanding of modern database systems. Normally offered each fall semester.

Type:

Quantitative Reasoning

- **CMPSC-F375 Introduction to Computer Networks**

  Prerequisites:

  CMPSC F331 and CMPSC F353

  Credits:

  4.00

  Description:

  This course explores the fundamentals of computer networks, protocols and layering, applications and their implications to everyday networking life. Normally offered in spring.

- **CMPSC-511 Launching a Career in Computer Science**

  Prerequisites:

  Junior or Senior standing

  Credits:

  1.00

  Description:

  This team-taught course is designed to explore career opportunities in Computer Science in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

Choose one additional 4-credit Computer Science course at the 200-, 300-, or 400-level

Mathematics Requirements (3 courses, 12 credits)
• MATH-165 Calculus I

Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-255 Probability and Statistics

Prerequisites:

MATH-165 or MATH-164 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

• MATH-285 Discrete Mathematics

Prerequisites:

MATH-164 or MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning
trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

For a suggested course sequence, visit the Computer Science Department page.

Note: The BS and BA degrees have an additional science requirement.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

- Computer Science Courses

Minor Requirements: 5 courses, 20 credits

- CMPSC-F131 Computer Science I
  
  Credits:
  
  4.00
  
  Description:
  
  This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.
  
  Type:
  
  Quantitative Reasoning

- CMPSC-F132 Computer Science II
  
  Prerequisites:
  
  CMPSC F131
  
  Credits:
  
  4.00
  
  Description:
Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students’ understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

Type:
Quantitative Reasoning

- **CMPSC-F265 Data Structures & Algorithms**

  Prerequisites:

  CMPSC F132

  Credits:

  4.00

  Description:

  Includes topics such as strings, stacks, queues, lists, trees, graphs, sorting, searching, hashing, dynamic storage allocation, and analysis of algorithms. Most programming will be done in the C language. Normally offered each semester.

  Type:
Quantitative Reasoning

- **CMPSC-F331 Object Oriented Programming**

  Prerequisites:

  CMPSC-F265

  Credits:

  4.00

  Description:

  Object-Oriented Programming in C++ is taught using Trolltech's multi-platform Qt library and other open-source libraries and tools. Emphasis is placed on program design and code re-use. Topics include: encapsulation, inheritance and polymorphism, UML, refactoring, parent-child relationships, properties, event-driven programming, test cases, regular expressions, constraints, XML, design patterns, and graphical user interfaces. We deal with some operating system and programming environment issues and also with code packaging. C++ is a very large language, so we do not attempt to cover it all. Instead we work with a carefully selected subset of language elements that permits students to exploit the powerful Qt libraries and write robust, idiomatic, and
interesting code. By the end of the course, the student should have a good command of C++, facility using and building libraries, an understanding and appreciation of the design patterns that we covered, and a well-established discipline of refactoring and code reuse. Prerequisite: CMPSC F265 (which may be taken concurrently). Normally offered each semester.

- CMPSC-H107 Ants, Rumors and Gridlocks

  Prerequisites:
  
  Math placement level of 2 or above or any MATH course at the level 100 or above and GPA of at least 3.3 or Honors student

  Credits:
  
  4.00

  Description:
  
  Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

  Type:
  
  SCI TECH ENGR, Quantitative Reasoning, Honors

- CMPSC-200 Introduction to Computer Science World

  Prerequisites:
  
  Freshman or Sophomore Standing
Computer Science is a dynamic discipline and students are not typically exposed to its many facets during their first years in college while important foundation work is done. This module aims to change that by presenting several areas of recent interest. In this way, students can form an idea of the scope of the vast and rapidly growing subject and career options, and begin to map out steps toward a potential career path. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include data science, machine learning, social networks, and parallel computing and others. The course is intended to be taken freshman or sophomore year.

- **CMPSC-310 Introduction to Data Science**

  **Prerequisites:**
  CMPSC-F132 and 1 of the following: STATS-240, STATS-250, MATH-134, MATH-165, MATH-164 or MATH-255.

  **Credits:**
  4.00

  **Description:**
  The field of data science is emerging at the intersection of the fields of social science and statistics, information and computer science and design. Data science involves using automated methods to analyze massive amounts of data and to extract knowledge from them. This course serves as a project-based introduction to data science in Python language, covering data organization and retrieval, statistical data processing and data visualization.

- **CMPSC-400 Senior Project in Computer Science**

  **Prerequisites:**
  Instructor permission required;

  **Credits:**
  4.00

  **Description:**
  Students specify, design and implement a software system.

- **CMPSC-401 Erlang Programming With Applications**

  **Prerequisites:**
  CMPSC-F132 & Permission of the Instructor

  **Credits:**
Erlang is a general-purpose, concurrent, functional programming language. It is designed to support distributed, fault-tolerant, soft-real-time, non-stop applications in the areas of telecommunications, online video games, social networking, high-performance Web development and databases. This course covers the language foundations, as well as intermediate topics such as distributed communications, client-server systems, and working with ETS tables and Mnesia database. Special attention will be paid to recursive and asynchronous programming, which are the two core principles of the language.

• CMPSC-501 Software Development Internship

Prerequisites:

CMPSC-F131, CMPSC-F132, and 1 CMPSC course at 200, 300 or 400 level. Prior to registration, student must submit credit approval form and gain faculty approval.

Credits:

2.00-4.00

Description:

Student works in a qualified software development setting to gain practical experience in modern industrial software development. Student will apply lessons learned in the classroom within a supervised, professional development while developing a greater understanding of the job expectations and organizational culture. Internship may be taken for 2-4 academic credit hours, at 4 hours of company work per week per each credit. Additional academic reports with be required. Students may take more than one internship, but the total number of credits applied toward graduation cannot exceed 12.

Type:

Expanded Classroom Requirement

• CMPSC-510 Computer Science Independent Study

Credits:

1.00-4.00

Description:

Guided study on a topic at an advanced level.

Type:

Quantitative Reasoning

• CMPSC-511 Launching a Career in Computer Science

Prerequisites:
Junior or Senior standing

Credits:

1.00

Description:

This team-taught course is designed to explore career opportunities in Computer Science in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

• CMPSC-F107 Ants, Rumors and Gridlocks

Prerequisites:

Math placement level of 2 or above or any MATH course at the level 100 or above

Credits:

4.00

Description:

Do viruses and rumors spread like forest fires? How do ants cooperate? Do spoken languages and biological species evolve in a similar way? Ants, Rumors, and Gridlocks exposes students to introductory aspects of computational science by addressing and answering these and many other questions. Students use and modify virtual experiments preprogrammed in the NetLogo programming language to investigate these topics and others in Social Sciences, Biology, and Environmental Science. No prior knowledge of computer programming or NetLogo is required.

Type:

SCI TECH ENGNR, Quantitative Reasoning

• CMPSC-F118 Computing With Words

Credits:

4.00

Description:

This course introduces students to aspects of Natural Language Processing involving computer-based analysis and comparison of texts written in natural languages (English and others). In addition to introductory computer programming in Python, the course also covers some basic statistics concepts. Intended for students at all levels.

Type:

Quantitative Reasoning
• CMPSC-F120 Programming for the World Wide Web

Credits:

4.00

Description:

This is a hands-on course aimed at non-CS students who want to learn how to build interesting and interactive web pages. We do not use any drag-and-drop software for this purpose. Instead we cover the basics of HTML and PHP and, if time permits, we look at some ways of building web pages that interact with databases. Each student will have, for the duration of the course, an account on a server that permits individuals to have web pages that are visible on the World Wide Web.

Type:

Quantitative Reasoning

• CMPSC-F124 Game Programming

Credits:

4.00

Description:

This course introduces students to computer game development, including, but not limited to, game programming. We use Game Maker, a framework for personal computers that runs equally well on XP, Vista, and Linux. We learn about the foundational concepts of two-dimensional (flat) games: graphics, sound, objects, actions, rooms, scores, levels, multiplayer support, artificial intelligence, and more. Game Maker has an intuitive interface that makes game development approachable for everyone, including those who have never written a single game or a single computer program. All games created by Game Maker can be saved as standalone applications and can be shared freely with classmates, friends, and family. This is not a course in graphics design, audio editing, or scriptwriting. Students are encouraged to use their creativity and imagination to design games and the correctness of game implementation is stressed throughout the course.

Type:

Quantitative Reasoning

• CMPSC-F131 Computer Science I

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.
• CMPSC-F132 Computer Science II

Prerequisites:
CMPSC F131

Credits:
4.00

Description:
Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

• CMPSC-F265 Data Structures & Algorithms

Prerequisites:
CMPSC F132

Credits:
4.00

Description:
Includes topics such as strings, stacks, queues, lists, trees, graphs, sorting, searching, hashing, dynamic storage allocation, and analysis of algorithms. Most programming will be done in the C language. Normally offered each semester.

• CMPSC-F331 Object Oriented Programming
Prerequisites:
CMPSC-F265

Credits:
4.00

Description:
Object-Oriented Programming in C++ is taught using Trolltech's multi-platform Qt library and other open-source libraries and tools. Emphasis is placed on program design and code re-use. Topics include: encapsulation, inheritance and polymorphism, UML, refactoring, parent-child relationships, properties, event-driven programming, test cases, regular expressions, constraints, XML, design patterns, and graphical user interfaces. We deal with some operating system and programming environment issues and also with code packaging. C++ is a very large language, so we do not attempt to cover it all. Instead we work with a carefully selected subset of language elements that permits students to exploit the powerful Qt libraries and write robust, idiomatic, and interesting code. By the end of the course, the student should have a good command of C++, facility using and building libraries, an understanding and appreciation of the design patterns that we covered, and a well-established discipline of refactoring and code reuse. Prerequisite: CMPSC F265 (which may be taken concurrently). Normally offered each semester.

Type:
Quantitative Reasoning

- **CMPSC-F333 Organization of Programming Languages**

Prerequisites:
CMPSC F253, F265

Credits:
4.00

Description:
An introduction to functional programming and to the meaning and implementation of various programming language features. The course begins with a brief introduction to the Scheme language, which is then used to write interpreters for small languages that contain features typical of larger, more realistic languages. Normally offered each spring semester.

Type:
Quantitative Reasoning

- **CMPSC-F345 Software Engineering**

Credits:
4.00
This course introduces the fundamental principles of software engineering. Requirement specification and life cycles are emphasized. Topics include requirements analysis and specification, analysis and design, architecture, implementation, testing and quality, configuration management. Professional ethics considerations will be explored and emphasized throughout the course. Prerequisite: CMPSC F265. 1 term - 4 credits. Normally offered each year.

Type:

Quantitative Reasoning

- **CMPSC-F353 Architecture of Computer Systems**

  **Prerequisites:**

  CMPSC F265.

  **Credits:**

  4.00

  **Description:**

  This course deals with the structure and operation of the major hardware components of a computer. Topics include basic logic design, basic datapath construction, basic pipelining, I/O system design, issues in memory hierarchy and network interface design. Normally offered each fall semester.

  Type:

  Quantitative Reasoning

- **CMPSC-F355 Operating Systems**

  **Prerequisites:**

  CMPSC F353 & CMPSC F265 and Working knowledge of C++.

  **Credits:**

  4.00

  **Description:**

  This course presents an overview of modern operating systems, from the points of view of an application developer and of a system developer. It covers process management, scheduling, concurrency management, multi-threading, memory management, and file system organization. Intensive programming assignments in the C language and in an assembly language help students to learn the POSIX application programming interface (API) and the low-level organization of a general-purpose operating system. Normally offered each spring.

  Type:

  Quantitative Reasoning
• CMPSC-F363 Intro to Database Systems

Prerequisites:

CMPSC 265 and MATH 285

Credits:

4.00

Description:

This is an introduction to the design and use of database systems --- systems that manage very large amounts of data. Topics covered include Entity-Relationship (E/R) data model, Relational data model, object-oriented model, and the conversion of E/R and relational models. We shall also learn some database languages, both concrete and abstract, including Structured Query Language (SQL), Object Query Language (OQL), relational algebra, etc. We will introduce the semistructured data, such as the popular Extensible Markup Language (XML), and their usage in database systems as well. The course is intended for computer science students who need to have an in-depth understanding of modern database systems. Normally offered each fall semester.

Type:

Quantitative Reasoning

• CMPSC-F375 Introduction to Computer Networks

Prerequisites:

CMPSC F331 and CMPSC F353

Credits:

4.00

Description:

This course explores the fundamentals of computer networks, protocols and layering, applications and their implications to everyday networking life. Normally offered in spring.

• CMPSC-R120 Programming for WWW Recitation

Credits:

0.00

Description:

Taken simultaneously with CMPSC 120. Students work with lab instructors to do work that enhances the course understanding. Such work can include practice problems, supervised programming time, as well as question-answer time and group project work. The hybrid version of the recitation: Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students do individual programming and reading.
- **CMPSC-R131 Recitation from Computer Science I**

  Prerequisites:
  
  Must be taken concurrently with CMPSC F131

  Credits:
  
  0.00

  Description:
  
  Taken simultaneously with CMPSC 131. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems and programming, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **CMPSC-R132 Recitation for Computer Science II**

  Prerequisites:
  
  Must be taken concurrently with CMPSC 132

  Credits:
  
  0.00

  Description:
  
  Taken simultaneously with CMPSC 132. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems and programming, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.
Creative Writing

The Creative Writing minor is intended for students who are not English majors. English majors interested in Creative Writing can pursue the Creative Writing Concentration within their major.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Creative Writing Minor Requirements
- English Courses

Minor Requirements: 5 courses, 20 credits

Students who are majoring in disciplines other than English may elect to minor in Creative Writing.

Core Requirement (1 course, 4 credits)

- ENG-212 Introduction to Creative Writing

  Credits:
  4.00

  Description:

  A study of the major genres in creative writing (poetry, fiction, and creative nonfiction) in which students will read as writers. Students will write a combination of analytical and original works, and learn the format and processes of writing workshops of writing workshops. Offered every semester.

Creative Writing Workshops (3 courses, 12 credits)

Students will take at least three creative writing workshops in two different genres.

Choose at least two (students may take one workshop twice):

- ENG-370 Fiction Writing Workshop I

  Prerequisites:
ENG-212

Credits:
4.00

Description:
An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:
Alternates Fall & Spring

ENG-371 Creative Non-Fiction Workshop

Prerequisites:
ENG-212

Credits:
4.00

Description:
For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:
Occasional

ENG-375 Poetry Writing Workshop I

Prerequisites:
ENG-212

Credits:
4.00

Description:
An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will
also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:

Offered Both Fall and Spring

Elective (1 course, 4 credits)

Choose one ENG elective at the 300-level or above.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Creative Writing

The Creative Writing minor is intended for students who are not English majors. English majors interested in Creative Writing can pursue the Creative Writing Concentration within their major.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Creative Writing Minor Requirements
  - English Courses

  - ENG-095 Developmental English Skills I
    
    Credits:
    
    4.00
    
    Description:
    
    This course is appropriate for native English speakers as well as non-native English speakers with a high level of oral fluency, but a need to improve English reading and writing skills for an academic setting. The course provides students with opportunities for and guidance in the development of Academic English writing. Class activities focus on aiding students in improving their academic English reading and writing skills to the proficiency levels required by the University. Particular emphasis is placed on the importance of planning, organizing and revising essays, as well as learning how to analyze, summarize, and cite an author's ideas and words. Offered in the Fall, Spring, and Summer Session I semesters. Course is enrolled by placement or instructor consent only.

  - ENG-096 Developmental English Skills II
    
    Credits:
    
    4.00
    
    Description:
    
    A continuation of ENG 095, this course provides opportunities to both native and non-native English speakers for further development of Academic English proficiency. Class activities focus on aiding students in improving their academic English reading and writing skills to the proficiency levels required by the University. Particular emphasis is placed on the importance of planning, organizing and revising essays, as well as learning how to analyze, summarize, and cite an author's ideas and words. Offered on the Madrid Campus only.
• ENG-098 ESL Reading/Writing I

Credits:

4.00

Description:

Utilizing a freshman-level English textbook and materials from the content courses, this course furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

• ENG-099 ESL Reading/Writing II

Credits:

4.00

Description:

A continuation of ENG 098, this course further furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

• ENG-101 Freshman English I

Credits:

4.00

Description:

This course studies persuasive and expository writing in the essay form through frequent writing assignments based on critical readings of class texts and discussions. Students will also compose a research paper and study the process of writing and revising for an academic audience. Offered every semester.

Term:

Offered Both Fall and Spring

• ENG-102 Freshman English II

Prerequisites:

ENG 100 or ENG101 or ENG 103
Further study of persuasive and expository writing through the study of literary form with emphasis placed on critical reading and the revision of academic writing.

Term:
Offered Both Fall and Spring

**ENG-103 Advanced Freshman English**

Prerequisites:
Invitation only.

Credits:
4.00

Description:
This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Frequent writing assignments based on close reading of literary texts are assigned as well as a research paper. Offered fall semester.

Term:
Offered Fall Term

**ENG-113 World Drama I**

Credits:
4.00

Description:
Survey of drama and theatre as part of world culture from classical Greece through 18th-century China. Normally offered yearly.

Term:
Offered Fall Term

Type:
Humanities & History, Humanities Literature Requirement, Cultural Diversity Opt B
• ENG-114 World Drama II

Credits:
4.00

Description:
Survey of drama and theatre as part of world culture from the 19th century to the present.

Term:
Offered Spring Term

Type:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

Term:

Offered Both Fall and Spring

Type:

Cultural Diversity Opt B, Humanities Literature Requirement, Diverse Perspectives, Honors

- ENG-141 Studies in British Literature
  
  Prerequisites:
  
  WRI-101, WRI-102 or WRI-H103

  Credits:

  4.00

  Description:

  Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

- ENG-142 Studies in American Literature

  Prerequisites:

  WRI-101, WRI-102 or WRI-H103

  Credits:

  4.00

  Description:

  Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

- ENG-151 Introduction to African-American Literature
Prerequisites:
WRI-101 WRI-102 OR WRI-H103

Credits:
4.00

Description:

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

Type:
Humanities Literature Requirement

• **ENG-152 Horror Fiction**

  Prerequisites:
  WRI-101 WRI-102 or WRI-H103

  Credits:
  4.00

  Description:

  This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

  Type:
  Humanities Literature Requirement

• **ENG-153 Literature of War**

  Prerequisites:
  WRI-101 WRI-102 or WRI-H103

  Credits:
  4.00

  Type:
  Humanities Literature Requirement
• ENG-155 Young Adult Literature

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

• ENG-157 Poetry and Religion

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

• ENG-161 Women Writing the West

Credits:

4.00

Description:

In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women
differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

- **ENG-212 Introduction to Creative Writing**

  **Credits:**

  4.00

  **Description:**

  A study of the major genres in creative writing (poetry, fiction, and creative nonfiction) in which students will read as writers. Students will write a combination of analytical and original works, and learn the format and processes of writing workshops. Offered every semester.

- **ENG-213 English Literature I**

  **Credits:**

  4.00

  **Description:**

  Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

  **Term:**

  Offered Both Fall and Spring

  **Type:**

  Humanities Literature Requirement

- **ENG-214 English Literature II**

  **Credits:**

  4.00

  **Description:**

  Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

  **Term:**

  Offered Both Fall and Spring

  **Type:**
• ENG-216 World Literature in English

Prerequisites:
WRI-102 or WRI-103

Credits:
4.00

Description:
A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean.   Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

  Type:

  Humanities Literature Requirement,Honors

- **ENG-266 Mad Men: Reading Visual Narratives**

  Credits:

  4.00

  Description:

  This course will focus on the cultural phenomenon of the TV Series Mad Men, considered by many to be the foremost example of Quality TV produced during the so-called golden age of television and engage with it on visual, cultural, literary and filmic levels. The basic premise of the course is that the current practice of binge watching one's favorite shows should be a heightened experience rather than a guilty pleasure, one akin to reading a novel. Watching a complex and sophisticated TV narrative involves taking into account the viewer's positionality as a filmic consumer, textual critic and social commentator. The class will consider various theoretical approaches to television narrative, beginning with ideas gleaned from the discourse of visual literacy, and proceed by applying textual analysis adapted from the more traditional modes of literary studies and film analysis. A combination of critical and evaluative sources will be examined, including book-length studies of the series, individual essays based on the series' appeal to style, American popular culture, advertising, gender roles, race, and 60s nostalgia. Additionally, the recent phenomenon of the series recap will serve as the touchstone to the class's collective viewing of the series and students will be challenged to synthesize and assess these popular online critiques as they draft their own recaps and creative readings of the episodes. The entire first two seasons of
Mad Men will be studied and the invaluable resource of director/producer commentaries will be incorporated into the study of the series with a view to acquiring critical insights and analytical skills that may be applied to other quality TV series that students currently enjoy watching.

Type:
Vis. & Perform Thry & Hst

- **ENG-H266 Mad Men: Reading Visual Narratives**

  Prerequisites:

  Restricted to CAS Honor Students

  Credits:

  4.00

• ENG-370 Fiction Writing Workshop I

Prerequisites:

ENG-212

Credits:

4.00

Description:

An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:

Alternates Fall & Spring
• ENG-371 Creative Non-Fiction Workshop

Prerequisites:

ENG-212

Credits:

4.00

Description:

For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:

Occasional

• ENG-372 The Literary Journal

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An exploration of selected literary journals and their role in American letters. Through our study of the Pushcart prize anthology and past and current issues of journals such as Agni, Antaeus, Callaloo, Georgia Review, Paris Review, Poetry, and Zoetrope, we will examine the ways in which journals both respond to and shape literary culture. Students will write a research paper on an essayist, poet, or story writer that they discover during this course. Taught by the editor of a Boston-area literary journal.

Term:

Occasional

• ENG-373 English Writers of the 1930S

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00
The social, political and cultural revolution in pre-World War II England as it is reflected in the poetry of Auden and Spender and the fiction of Huxley, Waugh, Isherwood, Bowen, Orwell, and Greene. Normally offered every third year.

Term:
Occasional

- **ENG-374 Drama Seminar**
  
  Prerequisites:
  WRI-102 or WRI-H103 with a minimum grade of B+

  Credits:
  4.00

  Description:
  Discussion and presentations on a pre-announced subject: a major playwright, a dramatic movement or genre, or the relation between script and performance. Normally offered every third year.

  Term:
  Occasional

- **ENG-375 Poetry Writing Workshop I**
  
  Prerequisites:
  ENG-212

  Credits:
  4.00

  Description:
  An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

  Term:
  Offered Both Fall and Spring

- **ENG-376 Literary Publishing**
Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

• ENG-377 The World of Literature on Film
  Prerequisites:
  WRI-102 or WRI-H103
  Credits:
  4.00

  Examination of film as an art form in the expression of literature. Several films to be viewed in class together with
  the relevant literary works. Normally offered every third year.
  Term:
  Occasional

• ENG-386 Classics of Mystery
  Prerequisites:
  WRI-102 or WRI-H103
  Credits:
  4.00
  Description:
  Classic stories of suspense and detection, including short stories and novels by Poe, Doyle, Chandler, Hammett,
  Christie, and others. Current examples also to be included. Normally offered alternate years.
  Term:
  Occasional

• ENG-387 Writing Women
  Prerequisites:
  WRI-102 or WRI-H103
This course studies 19th and 20th century women writers and questions the type of women who write, what they write about, and why they write. Themes we examine include domesticity, assimilation, and madness. Authors studied in the past have included Edith Wharton, Willa Cather, Anzia Yezierska, Nella Larsen, and Sylvia Plath. Normally offered alternate years. Cultural Diversity A

Term:
Occasional

Type:
Cultural Diversity Opt A

• **ENG-388 Utopias and Dystopias**

  **Prerequisites:**

  WRI-102 or WRI-H103

  **Credits:**

  4.00

  **Description:**

  This course follows the spirit of utopian experimentation as it travels through the linguistic patterns and imaginative conditions of brave new worlds in literature. We will consider how utopian thinking allows writers to take creative license with political systems, social relations, gender roles, and racial identities, and to blur dividing lines between nature, technology, and culture as well as between Earth and the cosmos. Our readings will balance such foundational texts as Plato's Republic and More's Utopia with revolutionary works from the nineteenth through the twenty-first centuries, and conjure utopian dreams as well as dystopian worlds gone wrong. Selected works of literary criticism and films will also be included.

• **ENG-390 Writing Process and Revision**

  **Prerequisites:**

  Any ENG course except for WRI-101

  **Credits:**

  4.00

  **Description:**

  This course studies the expressive and cognitive approaches to the writing process through personal journal writing, metaphor use and a review of grammar and stylistics. Written assignments emphasize discovery and
invention as well as the revising of academic prose. Normally offered every other year.

Term:
Occasional

- **ENG-392 Readings in Post-Colonial Literature**

  Prerequisites:
  
  WRI-102 or WRI-H103

  Credits:

  4.00

  Description:

  An Exploration of Post-colonial literature and how the empire writes back following the collapse of European colonialism. Special emphasis will be placed on the legacy of British Colonial rule and the contemporary use of literature and the English Language to both resist and problematize Eurocentric cultural assumptions. Authors studied will include E.M. Foster, Salman Rushdie, J.M. Coetzee, Anita Desai, Hanif Kureishi, and Zadie Smith, among others. Students will be introduced to Post-colonial critical theory and view film adaptations of literary texts.

  Term:
  Occasional

  Type:

  Cultural Diversity Opt B

- **ENG-394 Critical Prose**

  Prerequisites:

  WRI-102 or WRI-H103 with a minimum grade of B+

  Credits:

  4.00

  Description:

  This course studies both the literary and rhetorical modes of expository essay writing. Readings will focus on the craft of writing, the art of revision and reflections on the reader-writer relationship. Students will be asked to analyze prose passages, compose critical essays and work in peer groups. Normally offered alternate years.

  Term:
  Occasional
\* ENG-395 Rhetoric and Memoir

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course examines the rhetoric of memoirs written primarily by international figures who seek to use personal stories to shape readers' perspectives on political issues. After a brief introduction to rhetorical theory and to the genre of memoir, this course will examine contemporary memoirs that address such issues as racism, sexism, religious extremism, war, and genocide.

Term:

Occasional

Type:

Cultural Diversity Opt B

\* ENG-396 Varieties of Workplace Writing

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies a variety of workplace writing including summaries, memos, letters, directions, descriptions, reports and other technical and professional documents. Students may be required to complete certain assignments in collaborative teams. Document design and layout will also be emphasized. Normally offered alternate years.

Term:

Occasional

\* ENG-398 Boston: a City in Fiction

Prerequisites:

WRI-102 or WRI-H103

Credits:
4.00

Description:
Boston in novels from its beginning to the present: plan of the city, architecture, population, social classes, politics and human problems. Hawthorne, James, Howells, Jean Stafford, Edwin O'Connor, Dorothy West, and others.

Term:
Occasional

• ENG-399 Irish Literature

Prerequisites:
WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102

Credits:
4.00

Description:
Writers of the Irish Literary Revival, from the 1890s to the 1930s. Readings from Yeats, Joyce, Synge, O'Casey, and O'Flaherty. The influence of Anglo-Irish history on Irish writers. Normally offered every third year.

Term:
Occasional

• ENG-407 Literary Theory

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
A seminar on current approaches to the interpretation of literature, including psychoanalysis, deconstruction and feminist criticism. Students will experiment with making use of theory in analyzing selected literary texts.

Term:
Occasional

• ENG-408 Modern Greek Literature in English Translation

Prerequisites:
WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

A survey of writings in Modern Greek from 1821 to the present exploring Hellenism and the Greek cultural identity. Authors studied will include Kostis Palamas, Georgios Vizyinos, Alexandros Papadiamantis, Stratis Myrivilis, Photis Kontoglou, Dido Sotiriou, George Seferis, Constantine Cavafy, and Odysseas Elytis. A section of the syllabus will be reserved for the Greek-American/diaspora writers Helen Papanikolas, Elia Kazan, Jeffrey Eugenides, Olga Broumas, and Tryfon Tolides. Films and music traditions will be sampled as well.

ENG-409 Literary Bloomsbury: Woolf and Forster

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.

Term:

Occasional

ENG-410 From Pagan Reason to Christian Revelation

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

A survey of major works of literature and thought crucial to the transformation of pagan models of reason to Christian systems of belief, including works by Plato and Plotinus, St. Augustine and Dante. Of central concern is the changing conception of love, from Eros to Agape. Cross-listed with History 336.
• ENG-421 Special Topics in Group 1: Approaches To English Studies

Prerequisites:
ENG 213, ENG 214, ENG 215, ENG 216, ENG 217, or ENG 218

Credits:
4.00

Description:
A course that fits Group 1 of the English major requirements with varying subject matter.

Term:
Occasional

• ENG-422 Special Topics in Group 2: Genre and Backgrounds

Prerequisites:
Any 200-level English course

Credits:
4.00

Description:
A course that fits Group 2 of the English major requirements with varying subject matter.

Term:
Occasional

• ENG-424 Special Topics in Group 4: Literary History II : 1700-1900, American or British

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
A course that fits Group 4 of the English major requirements with varying subject matter. A interdisciplinary offering that features the writing of three of the late 19th century's greatest minds: Henry, the novelist who wrote The Portrait of a Lady, Daisy Miller, and The Turn of the Screw; William, the philosopher and psychologist who wrote Principles of Psychology (1890) and Varieties of Religious Experience (1902); and Alice, their sister, who became a feminist icon through her remarkable diary. A selection of these works will be explored alongside a James family biography.

Term:
Occasional

- ENG-425 Special Topics in Group 5: Literary History III: 1900- Present American, British, Or World

Prerequisites:
Any 200-level English course

Credits:
4.00

Description:
A course that fits Group 5 of the English major requirements with varying subject matter.

Term:
Occasional

- ENG-427 The Georgics of Virgil

Prerequisites:
Any 200-level English course

Credits:
1.00

Description:
A study of these poems by the Roman poet with a focus on the issues of translation.

- ENG-428 Virgil's Aeneid: First Three Books

Prerequisites:
Any 200-level English course

Credits:
1.00

Description:

A week by week reading of the Mesopotamian Epic that predates the Iliad by one thousand years, and is a masterpiece of heroic endurance and tragic insight. Discussions will be led by David Ferry, whose beautiful translation the class will use as text.

- **ENG-429 Classic Literature of the Underworld**

  Prerequisites:
  
  WRI-102 or WRI-H103

  Credits:
  
  1.00

  Description:

  This course will conduct close reading and discussion of selections from classical Greek and Roman texts, as well as from ancient Mesopotamian texts, highlighting passages that trace the descent to the underworld. Some of these readings include: the realm of the shades in Gilgamesh, the myth of Orpheus and Eurydice in Virgil, Homer's Odysseus and Achilles in Hades, the source of the River Styx in Pausanias.

- **ENG-430 Literature of the Vietnam War and the Post 9/11 Wars**

  Prerequisites:
  
  WRI-102 or WRI-H103

  Credits:
  
  4.00

  Description:

  This course will examine some of the fiction, non-fiction, and poetry produced in response to the Vietnam War and the most recent war in Iraq. In addition to comparing the literature that has emerged from these two very different wars, these texts will also be examined in relation to peace studies, a field in which there is an emerging consensus that literature and the arts must play a central role in examining questions of war and peace.

  Term:

  Occasional

- **ENG-431 Studies in Postmodern Fiction**

  Prerequisites:
  
  WRI-102 or WRI-H103
This course introduces students to the innovations that have re-defined fiction following the modern period. Novelists will include significant writers (3 Nobel Laureates among them) of the 20th/21st century, including Borges, Kundera, Calvino, Saramago, García Márquez, Vargas Llosa.

- **ENG-432 Classical Greek and Roman Poetry**
  
  **Prerequisites:**
  Any 200 level ENG course.
  
  **Credits:**
  1.00

  **Description:**
  Readings from major poems by the Greek and Roman poets of the ancient and classical periods. Works include: Sappho's lyric poems, Pindar's Odes, Horace's Odes, Virgil's Eclogues and Georgics, selections from the Aeneid and the Iliad.

- **ENG-440 The Odes of Horace**
  
  **Prerequisites:**
  Any 200-level English course
  
  **Credits:**
  1.00

  **Description:**
  This course represents a journey through the poetry of Horace, contemporary of Virgil and celebrated poet of the Pax Romana. Discussions will be led by David Ferry, whose beautiful translation of Horace's poetry the class will use as text.

- **ENG-470 Fiction Workshop II**
  
  **Prerequisites:**
  Any 200-level English course
  
  **Credits:**
  4.00
An intensive practical examination of plot, narrative, characterization, and style in the writing of fiction and/or creative non-fiction. Particular attention will be devoted to group discussion of weekly student writing assignments. Normally offered alternate years.

Term:
Alternates Fall & Spring

- **ENG-471 Advanced Nonfiction Workshop**

  **Prerequisites:**

  Any 200-level English course

  **Credits:**

  4.00

  **Description:**

  n advanced course in non-fiction writing that focuses intensively on developing non-fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to non-fiction writers. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. Normally offered annually.

- **ENG-475 Poetry Workshop II**

  **Prerequisites:**

  Any 200-level English course

  **Credits:**

  4.00

  **Description:**

  An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on both the quantity and quality of the student's own work. There will also be specific assignments in the many formal elements of the art. Written self-evaluations will also be required. Normally offered in alternate years.

  **Term:**

  Offered Spring Term

- **ENG-476 Salamander Practicum**

  **Prerequisites:**
Take ENG-212

Credits:
4.00

Description:
Salamander is a nationally known professional literary journal published from the Suffolk University English Department. In the Salamander Practicum course, students serve as first evaluators of submissions to the magazine, including poetry, fiction, and memoir. They will compare and discuss their evaluations and make recommendations to the editorial board and assist with magazine production, marketing, and event planning. Students will study and write literary analyses of works included in Salamander and in other professional literary journals, such as Ploughshares, Agni, One Story, and the Harvard Review.

- ENG-480 Fiction Writing Workshop III

Prerequisites:
Any 200-level English course

Credits:
4.00

Description:
An advanced course in fiction writing that focuses intensively on developing fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to fiction writers.

- ENG-490 Imperial Rome

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
This course offers an introduction to the Golden Age of Roman culture and power. Close readings of selections from major historians, poets, political thinkers, and philosophers will be examined in the context of Augustan Rome. Topics such as pietas, virtus, and gravitas, as well as the competing claims of public duty and private devotion, stoic maxim and erotic love lyric, will be discussed from the perspectives of writers such as Virgil, Livy, Tacitus, Horace, Catullus, and Lucretius. Note: This course is identical to HUM 304. Normally offered in alternate years.

Type:
Humanities & History
• **ENG-510 Independent Study**

  Prerequisites:

  WRI-102 or WRI-H103

  Credits:

  1.00- 4.00

  Description:

  By special arrangement, a junior or senior may pursue an independent research project under the supervision of a faculty member. Consent of instructor and chairperson required. Offered every semester.

  Term:

  Offered Both Fall and Spring

• **ENG-514 Internship in English**

  Prerequisites:

  WRI-102 or WRI-H103

  Credits:

  2.00

  Description:

  Individualized guidance in a career-related activity. Upper-class English majors may gain academic credit for work preparing them for an English-related career, provided that the work is monitored by a member of the English faculty. Department approval is required.

- English Language for Internationals Program (ELI)
- Developmental Math

**ENG-095 Developmental English Skills I**

Credits:

4.00

Description:

This course is appropriate for native English speakers as well as non-native English speakers with a high level of oral fluency, but a need to improve English reading and writing skills for an academic setting. The course provides students with opportunities for and guidance in the development of Academic English writing. Class activities focus on aiding students in improving their academic English reading and writing skills to the proficiency levels required by the University. Particular emphasis is placed on the importance of planning, organizing and revising essays, as well as learning how to analyze, summarize, and cite an author's ideas and words. Offered in the Fall, Spring, and Summer Session I semesters. Course is enrolled by placement or instructor consent only.

**ENG-096 Developmental English Skills II**

Credits:

4.00

Description:

A continuation of ENG 095, this course provides opportunities to both native and non-native English speakers for further development of Academic English proficiency. Class activities focus on aiding students in improving their
academic English reading and writing skills to the proficiency levels required by the University. Particular emphasis is placed on the importance of planning, organizing and revising essays, as well as learning how to analyze, summarize, and cite an author's ideas and words. Offered on the Madrid Campus only.
Developmental English & Math Programs

The mission of Developmental English and Math (DEMP) is to provide academic support to those students enrolled in our Math Shop/Developmental Math Courses, Developmental English Courses, Freshman Second Language Program (FSL), English Language for Internationals Program (ELI), and EF/SU Transitional Program.

Support is offered through rigorous English and core content courses, math workshop courses, intensive advising, and faculty outreach. We also provide CLEP and institutional TOEFL examinations.

- **Developmental English**
- **Freshman Second Language Program (FSL)**
- **English Language for Internationals Program (ELI)**
- **Developmental Math**

The FSL Program enrolls non-native English speakers who are graduates of high schools accredited in the United States, as well as international students who have achieved a TOEFL score of at least 500 (PBT), 173 (CBT) or 61 (IBT). Other standardized tests that demonstrate academic English proficiency, such as the IELTS, SATs, or ACTs will also be considered for admission.

The FSL program is a full freshman year. The program includes courses from Suffolk University’s core requirements, for which students earn academic credit and make advancements toward earning a baccalaureate degree.

Students must maintain a grade of a C- or higher in order to pass the program and advance to their sophomore year.

All students in the FSL Program take the following courses their first year:*

**FSL Program Courses**

**Fall Semester**

- **ENG-098 ESL Reading/Writing I**

  **Credits:**

  4.00

  **Description:**

  Utilizing a freshman-level English textbook and materials from the content courses, this course furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a
course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

- **HST-150 Empires & Globalization in World History II**

  **Credits:**
  
  4.00

  **Description:**
  
  This is the second of the two-course series of Empires and Globalization in World History. Course discusses the origins and development of globalization and capitalism from the perspective of economic history. Major issues include state-making, wars, and the rivalry among early modern empires, economic development, the Industrial Revolution and the formation of the global trade system. The specific topics may change every year due to new academic developments and publications. Cultural Diversity B

  Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement

- **CI-113 Revising Reality**

  **Prerequisites:**
  
  Restricted to students with less than 54 credits. Students with more than 54 credits needing to fulfill their CI requirement should seek approval from the Undergraduate Advising Office.

  **Credits:**
  
  3.00

  **Description:**
  
  Reality and perception have been debated and discussed for millennia. Humans see and experience their world in different ways. How do humans determine what is true and good and what advancements are necessary? In this course, students will creatively explore these big questions and revisit knowledge using new and sometimes divergent perspectives. Students will participate in dirty and courageous learning by crafting products, creating visual projects, and coming into original thought via trial and error. Students will also develop their analytical and critical thinking skills, while learning to communicate effectively and honestly.

  **Type:**
  
  Creativity and Innovation

**Program Elective(s) (4-5 Credits)**

Spring Semester
ENG-099 ESL Reading/Writing II

Credits:
4.00

Description:
A continuation of ENG 098, this course further furnishes students with active reading strategies and the conventions of academic writing that will be applicable to their collegiate course work. Students will develop the analytical skills necessary for academic success by producing in-class and take-home essays, participating in debates, and giving oral presentations. Students will be required to work with a course management program and to utilize technology effectively in their writing. The skills obtained in these courses will allow students to participate comfortably in their mainstream college classes.

SF-1138 Malevolent Or Misunderstood?: Monsters of Mythology

Credits:
4.00

Description:
This course will critically engage with folk and pop-cultural representations of monsters. Students will read from diverse areas relating to the topic, including psychology, anthropology, history, and cultural studies. This course will explore the changes in monster figures from early history to the internet age. The main purpose of this course is to teach students to write academically and to think critically. This course aims to give students the tools to engage in academic inquiry, to think beyond what they believe they already know and to question. This course will give students the freedom to develop their own ideas about the subjects discussed.

P.AD-201 Social Change

Credits:
3.00

Description:
This course will examine social change in the U.S. and abroad. The course will also examine the role of business, nonprofits, and the public sector in addressing social problems. Topics studied may include the Industrial Revolution, the civil rights movement, the women's movement, environmentalism, and the gay and lesbian movement.

Type:
Diverse Perspectives, BSBA SOCIAL CHANGE

Program Electives (8-9 Credits)

*NESAD students' program may deviate slightly.* All FSL courses award academic credit. The amount of credit awarded toward degree requirements varies with the school and major the student matriculates into.

The ELI Program is an intensive, non-degree English as a Foreign Language program, designed for international students planning to attend Suffolk University or other American universities. The ELI classes help students develop English proficiency and prepare them to matriculate into a college setting. Because this is a language immersion program the classes are non-credit. The program is appropriate for students who need language instruction at the intermediate to advanced level; it is not designed for individuals with little or no knowledge of English.

The ELI Program offers seven levels of instruction. Each level may be completed within a semester of study. Four semesters of study are offered a year. The fall and spring sessions are 14-week programs, while the summer sessions meet for seven weeks. Placement into and progression through each level is determined using a variety of assessment tools, including coursework and the institutional TOEFL.

All levels require 20 hours of class instruction per week, including:

- 12 hours a week of skills instruction (grammar, reading, writing, speaking, listening, note taking, and research)
- 3 hours a week in the computer and/or language lab (TOEFL preparation, pronunciation and accent reduction, and academic computing skills)
- 5 hours a week of cultural and academic activities (including research and guest lectures)

English for Internationals Courses

- ELI-004 Academic Presentation Skills Pronunciation Skills

Prerequisites:

The focus is on American culture, values, and institutions, giving students a content driven opportunity to practice the English skills introduced in the other ELI courses. The course meets for five hours a week. College credit is not awarded.

- **ELI-054 Low Advanced Research Skills**

  Prerequisites:

  ELI students only

  Credits:

  0.00

  Description:

  For non-native English speakers assessed to be at a low advanced level (475-500/153-173 CBT TOEFL/ 3.0-3.5 TWE) who need to acquire academic writing skills in American English. The focus is on research skills needed to be a successful student at an American college. The course meets for five hours a week. College credit is not awarded. The course meets five hours a week. College credit is not awarded.

- **ELI-061 High Advanced Listening/Speaking/ Pronunciation Skills**

  Prerequisites:

  ELI students only

  Credits:

  0.00

  Description:

  For non-native English speakers assessed to be at a high advanced level (500-525/173-193 CBT TOEFL / 3.5-4.0 TWE) who need to acquire aural fluency in American English. The focus is on intensive practice in listening comprehension, speaking, and pronunciation. The course meets for six hours a week. College credit is not awarded.

- **ELI-062 High Advanced Reading/Writing/Grammar Skills**

  Prerequisites:

  ELI students only

  Credits:

  0.00
For non-native English speakers assessed to be at a high advanced level (500-525/173-193 CBT TOEFL / 3.5-4.0 TWE) who need to acquire written fluency in American English for an academic setting. The focus is on intensive practice in reading, writing, and English grammar. The course meets for six hours a week. College credit is not awarded.

**ELI-063 High Advanced American Culture Skills**

Prerequisites:

ELI students only

Credits:

0.00

Description:

For non-native English speakers assessed to be at a high advanced level (500-525/173-193 CBT TOEFL / 3.5-4.0 TWE) who need to acquire academic fluency in American English. The focus is on American culture, values, and institutions, giving students a content driven opportunity to practice the English language skills introduced in the other ELI courses. The course meets for five hours a week. College credit is not awarded.

**ELI-064 High Advanced Research Skills**

Prerequisites:

ELI students only

Credits:

0.00

Description:

For non-native English speakers assessed to be at a high advanced level (500-525/173-193 CBT TOEFL / 3.5-4.0 TWE) who need to acquire academic writing skills in American English. The focus is on research skills needed to be a successful student at an American college. The course meets for five hours a week. College credit is not awarded.

**ELI-071 Special Advanced Listening/Speaking/ Pronunciation Skills**

Prerequisites:

ELI students only

Credits:

0.00

Description:
For graduate level, non-native English speakers assessed to be at a high advanced level (525-550/190-200 CBT TOEFL / 4.0-4.5 TWE) who need to acquire aural fluency in American English. The focus is on intensive practice in listening comprehension, speaking, and pronunciation; the content is derived from Harvard Business School Case Studies. The course meets for six hours a week.

- **ELI-072 Special Advanced Reading/Writing/Grammar Skills**
  
  **Prerequisites:**
  
  ELI students only
  
  **Credits:**
  
  0.00
  
  **Description:**
  
  For graduate level, non-native English speakers assessed to be at a high advanced level (525-550/190-200 CBT TOEFL / 4.0-4.5 TWE) who need to acquire written fluency in American English. The focus is on intensive practice in reading, writing, and English grammar; the content is derived from business texts and Harvard Business School Case Studies. The course meets for six hours a week.

- **ELI-073 Spec Adv Amer Culture Lab**
  
  **Credits:**
  
  0.00
  
  **Description:**
  
  A course for graduate level, non-native English speakers assessed to be at a high advanced level of proficiency (525 - 550 PBT/193 - 213 CBT/70 - 79 IBT/3.5 - 4.0 TWE), who need to acquire communicative fluency in American English. The focus is on American culture, values, and institutions, giving students a content driven opportunity to practice the English skills introduced in the other ELI courses. The course meets for four hours a week. College credit is not awarded.

- **ELI-074 Spec Adv Research Skills**
  
  **Credits:**
  
  0.00
  
  **Description:**
  
  A course for graduate level, non-native English speakers assessed to be at a high advanced level of proficiency (525 - 550 PBT/193 - 213 CBT/70 - 79 IBT/3.5 - 4.0 TWE), who need to master graduate-level academic skills such as library research, evaluation of sources, quoting, paraphrasing and citation methods, and TOEFL preparation. The course meets fours hours a week. College credit is not awarded.

- **ELI-077 Academic Presentation Skills Pronunciation Skills**
Prerequisites:
ELI Students only

Credits:
0.00

Description:

An introduction to the processes of professional communication, with an emphasis on oral presentations, effective listening, and interpersonal communication. Students acquire skills in oral and physical delivery, organization, persuasion, critical thinking, and the use of support media. Through lectures, text, and practical applications; students will learn how to select a topic, tailor a presentation to a specific audience, research, design, and structure an oral presentation, collaborate with a team of colleagues, utilize visual aids, and critique professional / rhetorical situations.
Developmental English & Math Programs

The mission of Developmental English and Math (DEMP) is to provide academic support to those students enrolled in our Math Shop/Developmental Math Courses, Developmental English Courses, Freshman Second Language Program (FSL), English Language for Internationals Program (ELI), and EF/SU Transitional Program.

Support is offered through rigorous English and core content courses, math workshop courses, intensive advising, and faculty outreach. We also provide CLEP and institutional TOEFL examinations.

- Developmental English
- Freshman Second Language Program (FSL)
- English Language for Internationals Program (ELI)
- Developmental Math

**MATH-000 Mathshop - Bridge to College Math**

**Credits:**

0.00

**Description:**

A NON-CREDIT, full semester workshop designed for students who need substantial review before starting MATH 104, MATH 106, OR MATH 121. Similar to a course, MATHSHOP meets three hours per week throughout the semester. Topics covered are tailored to the needs of students and include basic math material, basic algebra, graphing use of calculators, ways of dealing with math fears and study methods. Several sections normally offered each semester.

- Major Requirements
- Minor Requirements
- Societies
- Economics Courses

Major Requirements: 12 courses, 40 credits

Required Courses (9 courses, 28 credits)

- CAS-201 College to Career: Explore Your Options And Find Your Path

  Prerequisites:

  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

  Credits:

  1.00

  Description:

  This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- EC-101 Applied Microeconomics

  Prerequisites:

  Non CAS majors need to have completed at least 15 credits.
This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

**Type:**

Social Science, BSJ SOCIAL SCIENCE

**EC-102 Global Macroeconomics**

**Prerequisites:**

Non-CAS majors need to have completed at least 15 credits

**Credits:**

3.00

**Description:**

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

**Type:**

Social Science, BSJ SOCIAL SCIENCE

**EC-311 Intermediate Micro Theory**

**Prerequisites:**

EC 101 and EC 102

**Credits:**

4.00
Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science, BSJ SOCIAL SCIENCE

- EC-312 Intermediate Macro Theory

  Prerequisites:

  EC-101 and EC-102

  Credits:

  4.00

  Description:

  This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- EC-450 Applied Econometrics

  Prerequisites:

  STATS-250 or STATS-240 or MATH-255 or permission of instructor

  Credits:

  4.00

  Description:

  This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.
- **EC-490 Senior Seminar in Economics**
  
  **Prerequisites:**
  
  EC-450 or STATS-350 and Senior Standing; Or permission of Undergraduate Director.
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This is a required course for all students majoring in economics, to be taken in the spring semester of their senior year. Students are required to develop an economic thesis project in consultation with the professor for the course and to present it to the class.

- **EC-511 Professional Development in Economics**
  
  **Prerequisites:**
  
  CAS-201 and at least 54 credits
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation.

- **STATS-250 Applied Statistics**

  **Prerequisites:**
  
  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)
  
  **Credits:**
  
  4.00
Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

Elective Courses (3 courses, 12 credits)

• EC-H102 Honors Global Macroeconomics

Prerequisites:

GPA of 3.3 or higher

Credits:

3.00

Description:
The measurement of economic growth; introduction to the theory of determination of national income and the price level; unemployment and inflation; theories on economic growth and the role of labor and capital in economic growth; functioning and impact of the monetary system; analysis of monetary and fiscal policies for economic stabilization; international transactions and their influence on the domestic economy. Prerequisites: GPA of 3.2 or higher. Normally offered every year.

Type:
Social Science,BSJ SOCIAL SCIENCE,Honors

- **EC-131 Environmental Economics**

  Credits:
  4.00

  Description:
  Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

  Type:
  Social Science,BSJ SOCIAL SCIENCE

- **EC-141 Development Economics**

  Credits:
  4.00

  Description:
  Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

  Type:
  Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

- **EC-151 Economic & Human Geography**

  Credits:
  4.00

  Description:
The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Asian Studies, Diverse Perspectives

- **EC-300 Professional Development in Economics**

  Prerequisites:

  EC-101 and EC-102 and at least 54 credits

  Credits:

  1.00

  Description:

  This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation. Ordinarily taken during junior year. Offered during the fall semester.

- **EC-311 Intermediate Micro Theory**

  Prerequisites:

  EC 101 and EC 102

  Credits:

  4.00

  Description:

  Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

EC-312 Intermediate Macro Theory

Prerequisites:
EC-101 and EC-102

Credits:
4.00

Description:
This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:
Social Science,BSJ SOCIAL SCIENCE

EC-420 Special Topics in Economics

Credits:
4.00

Description:
Special Topics course. Topic varies semester to semester.

Type:
Social Science

EC-421 Public Finance

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
The theory of tax policy and tax structure. The effects on economic behavior (including labor supply, saving, risk-taking and investment, charitable giving, and growth) of different taxes (income, sales, value-added, inheritance, wealth, property). Tax equity, efficiency and incidence, in the United States and in comparative perspective.
Additional topics include modeling state taxes; social security and pensions; and tax compensation. Normally offered yearly.

**EC-423 Economics of Regulation**

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
This course examines regulation and analyzes the structure, conduct, and performance of American industry. Monopoly and strategic behavior in oligopoly and monopolistic competition are considered. U.S. antitrust law and the effect of regulatory laws on industrial performance are explored. Regulatory practices, rate setting, deregulation, public-enterprise pricing, and issues in privatization are examined, with an emphasis on case studies and policy analysis. Normally offered every other year.

**EC-430 International Trade Theory & Policy**

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the political economy of trade are studied. Normally offered every year.

**EC-431 History of Economic Thought**

Prerequisites:
EC-101 and EC-102

Credits:

4.00

Description:

Presents the leading contemporary schools of economic thought as the outcome of theoretical and philosophical controversies that began with the ancient Greeks and that continue today. The course covers the major contributors to economic thought, including Aristotle, Aquinas, the mercantilists, and the contributors to the 18th-century enlightenment, notably Adam Smith and David Hume. Going forward, it considers Marx, the neoclassical school of Jevons, Menger and Walras and the Keynesian school, along with some of the more modern schools such as behaviorism, institutionalism and cognitive economics. The contributions of the economists and philosophers studied in the course are considered in context of the times in which they wrote and lived. Students will acquire a grasp of the principal tenets of contemporary economic theory as well as an understanding of the historical origins of the disputes that still divide economists on major theoretical and philosophic issues.

Type:

BSJ SOCIAL SCIENCE

- EC-432 Managerial Economics

Prerequisites:
EC-101 and EC-102

Credits:

4.00

Description:

Managerial economics applies microeconomic and quantitative analysis to the formulation of rational managerial decisions. These tools shape decisions about output and pricing, about the choice of product quality, the type of production process used, the mix of inputs employed, the suitability of mergers and acquisitions, the management of risk, and the design of incentives in a world of imperfect information. This course explains the tools of managerial economics, puts them into context using numerous case studies, and applies them to significant real business situations.

Type:

Quantitative Reasoning

- EC-433 Public Choice

Prerequisites:
EC-101 and EC-102

Credits:
Description:

This course considers the degree to which it is possible to explain, predict, and guide political decision through the application of economic analysis. The course is organized around two competing visions of public choice: (1) a traditional organic approach that sees the core problem for public choice as requiring the maximization of social welfare and (2) a newer contractual approach that sees that problem as requiring attention to the institutional framework within which political decisions are made. Topics to be considered include the Arrow paradox and other problems in aggregating individual choices, rent-seeking, the Leviathan hypothesis, and non-market demand-revealing methods.

Type:

Social Science, BSJ SOCIAL SCIENCE

- EC-435 Economics of Energy and Natural Resources

Prerequisites:

Take EC-101;

Credits:

4.00

Description:

This course applies economic analysis to identify the origins, consequences, and policy implications of problems related to renewable and non-renewable natural resources, with particular attention to energy. Resources considered include forests, fisheries, water, minerals, and land. Energy resources covered include oil, gas, coal, nuclear, and alternatives (wind, solar, biomass, hydrogen, etc.), as well as electricity. Concepts examined include externalities, learning-by-doing, peak-load pricing, regulation, sustainability, cost-benefit analysis, and the commons problem.

Type:

BSJ SOCIAL SCIENCE, Social Science

- EC-440 International Financial Economics

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course is a combination of International Finance and Corporate Finance and designed to give students a strong foundation in the theory and practice of multinational financial management. Course materials include (a)
basics of corporate finance and capital asset pricing, (b) foreign currency futures, (c) derivative securities in foreign exchange markets such as currency futures, options, swaps, (d) exchange risk management for multinational corporations, (e) global capital markets and financial crisis.

Type:
Social Science

• EC-442 International Monetary Economics

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:
Social Science, BSJ SOCIAL SCIENCE

• EC-445 The Economics of the European Union

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
An economic analysis of the European Union, the history of European monetary and economic integration and the creation of the Euro. A survey of the development and evolution of key European policies, such competition, industry, agriculture, environment, regional, etc. A discussion of economic implications of the enlargement of the European Union, as well as its trade relations with the U.S. and other countries within the context of the World Trade Organization.

Type:
Social Science, BSJ SOCIAL SCIENCE

• EC-450 Applied Econometrics
Prerequisites:
STATS-250 or STATS-240 or MATH-255 or permission of instructor

Credits:
4.00

Description:
This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:
Social Science, BSJ SOCIAL SCIENCE

• EC-460 Game Theory

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:
Quantitative Reasoning

• EC-483 Money, Banking & Financial Markets

Prerequisites:
EC 101, EC 102

Credits:
Description:

This course examines the role of depository institutions and the Federal Reserve system in determining the supply of money. The course also explains the financial environment and the role of monetary policy decisions on changes in price, interest rates, money, and economic activity. The course provides the student with both theoretical and applied analysis. Prerequisites: EC 101, EC 102.

Type:

Social Science, BSJ SOCIAL SCIENCE

• EC-490 Senior Seminar in Economics

Prerequisites:

EC-450 or STATS-350 and Senior Standing; Or permission of Undergraduate Director.

Credits:

4.00

Description:

This is a required course for all students majoring in economics, to be taken in the spring semester of their senior year. Students are required to develop an economic thesis project in consultation with the professor for the course and to present it to the class.

Type:

BSJ SOCIAL SCIENCE, Social Science

• EC-503 Internship in Economics

Prerequisites:

Instructor's consent required

Credits:

4.00

Description:

Approximately 12 hours per week working in a position designed to give the student responsibility and a learning opportunity in economics. Interested students should consult the instructor in advance.

Type:

Social Science, BSJ SOCIAL SCIENCE
• EC-504 Economic Competitiveness: Theory and Practice

Prerequisites:
Instructor's consent required

Credits:
4.00

Description:
This course examines the concept of economic competitiveness among nations and states and its usefulness to policymakers seeking to improve economic conditions. The emphasis will be on state-based economic competitiveness. We will read the current literature on economic growth and competitiveness and explore the current controversy surrounding the shortcomings of business climate indices. Special attention will be given to Beacon Hill Institute's index which attempts to identify the states with the sets of policies that sustain long-term economic growth and sustainable high incomes for citizens. The student will apply a stress test to the BHI index identifying its strengths and weaknesses. To learn how the index is used by professionals, the student will also compare the index against similar measures and interview at least two practitioners on how their states apply the index. The student will meet regularly with her advisor and submit a research paper and a professional memorandum advising BHI on how best to improve the index.

Type:
Expanded Classroom Requirement, Social Science

• EC-510 EC Independent Study

Prerequisites:
An independent study form must be submitted to the CAS Dean's Office.

Credits:
1.00-5.00

Description:
Independent study in economics

Type:
Social Science, BSJ SOCIAL SCIENCE

• EC-511 Professional Development in Economics

Prerequisites:
CAS-201 and at least 54 credits

Credits:
Description:

This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation.

• STATS-250 Applied Statistics

    Prerequisites:

    MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

    Credits:

    4.00

    Description:

    Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Normally offered each semester.

    Type:

    Quantitative Reasoning

• STATS-H250 Honors Applied Statistics

    Prerequisites:

    MATH-128, MATH 130, 134, 146, 164 or 165 and Honors Course; GPA of 3.3 or higher

    Credits:

    4.00

    Description:

    Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.
- STATS-350 Applied Statistical Methods

Prerequisites:
STATS 250

Credits:
4.00

Description:
This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Education Studies

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements
- Education Studies Courses

Minor Requirements: 5 courses, 20 credits

Core Requirements (2 courses, 8 credits)

- EDUC-110 Introduction to Education

  Credits:

  4.00

  Description:

  Working with children and adolescents is a facet of many professions. This course will introduce students to the study of education occurring in formal and informal settings. This course focuses on the relationships among, and between, teachers, discourse, and community. Students will glean insight into the relationship of school and society as well as power and control in American Education. Required of all education minors. Five hours of field work required.

  Term:

  Offered Both Fall and Spring

  Type:

  Social Science

- EDUC-202 Educational Psychology

  Credits:

  4.00

  Description:
Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

Term:
Offered Both Fall and Spring

Type:
Social Science

Elective Courses (3 courses, 12 credits)

Choose three of the following, at least one of which should be an EDUC course and one must be a 300-level course:

1. **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**
   
   **Credits:**
   4.00

   **Description:**
   Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

   **Term:**
   Offered Both Fall and Spring

   **Type:**
   Expanded Classroom Requirement, Social Science

2. **EDUC-205 Service Learning: Community Tutoring Project**
   
   **Prerequisites:**
   This class fulfills the Expanded Classroom Requirement

   **Credits:**
   4.00-8.00

   **Description:**
   Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

   **Term:**
   Offered Both Fall and Spring
- **EDUC-208 Service Learning: College Access**

  **Credits:**

  4.00

  **Description:**

  Students complete a minimum of 35 hours of tutoring and coaching in an educational setting, or a community organization in conjunction with a weekly seminar on campus. Programs include COACH, Connections to College, and others. Open to all majors. No previous experience required.

  **Term:**

  Offered Both Fall and Spring

- **EDUC-210 Service Learning: Alternative Spring Break**

  **Prerequisites:**

  Open to all majors, Instructor's signature required

  **Credits:**

  4.00

  **Description:**

  Students complete all research, travel, and reporting requirements in conjunction with Suffolk University's Alternative Spring Break. Open to all majors. No previous experience required.

  **Term:**

  Offered Spring Term

- **EDUC-214 Introduction to Teaching**

  **Credits:**

  4.00
This course introduces students to the basic competencies of school teaching. Topics include: lesson planning, classroom management, grouping for instruction, effective pedagogical practices, assessment methods, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks/common core state standards. Field observations (25 hours) required.

- **EDUC-310 Culturally Responsive Education**

  Credits:
  4.00

  Description:
  The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

  Term:
  Offered Fall Term

  Type:
  Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-313 Classroom Communication**

  Credits:
  4.00

  Description:
  Examines communication between and among teachers and students in the classroom setting. Topics include: communication apprehension, building oral fluency, use of media technology to enhance student learning, cooperative learning, and related professional and legal responsibilities of teachers. Ten pre-practicum observation hours required for Teacher Candidates.

  Term:
  Offered Spring Term

  Type:
  Social Science

- **EDUC-315 Strategies for Emerging English Learners**
This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

Type:

Diverse Perspectives, Social Science

- **EDUC-402 History & Philosophy of American Education**

  Credits:

  4.00

  Description:

  Explores the evolution of schooling in the United States from The English High School to present. Theorists include: Mann, Franklin, Dewey, Sizer, and others.

  Term:

  Offered Spring Term

  Type:

  Social Science

- **EDUC-408 Youth Programming**

  Credits:

  4.00

  Description:

  This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

  Type:

  Social Science
• EDUC-414 Urban Schooling

Credits:
4.00

Description:
This course is an in-depth investigation of policies effecting urban schools; topics include: demographic influence on education, influences of national and state regulations on urban schools, sociological factors unique to urban schools, and in-depth analysis of equity and achievement.

Term:
Occasional

Type:
Social Science

• EDUC-424 Global Issues and Trends in American Education

Credits:
4.00

Description:
Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:
Occasional

Type:
Social Science

• EDUC-510 Independent Study

Prerequisites:
An independent study form must be submitted to the CAS Dean's Office.

Credits:
1.00- 4.00

Description:
Members of the Department will meet with students to direct their research in areas of special interest to them. Projects of this sort will be authorized only in unusual circumstances upon the recommendations of the
• **SOC-113 Introduction to Sociology**

  **Credits:**
  
  4.00
  
  **Description:**
  
  An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

  **Term:**
  
  Offered Both Fall and Spring

  **Type:**
  
  Social Science

• **SOC-116 Social Justice**

  **Credits:**
  
  4.00
  
  **Description:**
  
  An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

  **Term:**
  
  Offered Both Fall and Spring

  **Type:**
  
  Social Science

• **SOC-209 Youth in American Society**

  **Credits:**
  
  4.00
The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

- **SOC-232 Street Gangs**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

  **Type:**
  
  Cultural Diversity Opt A

- **SOC-237 School to Prison Pipeline**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course will examine the mechanisms through which U.S. social institutions, particularly schools, facilitate youth involvement in the juvenile and criminal justice systems. These mechanisms include: inequity, disability tracking, zero-tolerance policies, push-out, and the criminalization of adolescent behavior. Students will engage in activities aimed at analyzing these processes and developing methods to disrupt them at the social, political, educational, and instructional levels.

- **SOC-276 Sex and Society**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

  **Term:**
• SOC-308 Sociology of Education

Credits:
4.00

Description:

Education is key in a democracy in which students need to develop themselves into knowledgeable people, with a strong sense of self, able to think critically with a developed ability to question others and to feel and act as empowered, active citizens. This is a tall order given the varieties of pressures on schools these days. But it is extremely important for these skills to be developed. With the shift in the economy, schools are going to be the critical factor in enabling students to compete in a globalized workplace and world.

• SOC-332 Restorative Justice

Credits:
4.00

Description:

The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals. We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

Type:

Expanded Classroom Requirement

• SOC-337 Juvenile Justice and the Law

Credits:
4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.
• SOC-343 Child Welfare Services
  Credits:
  4.00
  Description:
  A survey of the historical development and current composition of services for children, including income maintenance, daycare, foster and institutional care and the adoption process.
  Term:
  Occasional

• SOC-344 Community Organization
  Credits:
  4.00
  Description:
  A study of the different types and functions of communities. Through identifying community needs, resources, and structure, students learn effective ways to organize for change.

Please note that students majoring in Sociology may only double count one sociology course within the Education Studies minor.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

  A 12-week practicum experience as a student teacher in a secondary school. See regulations regarding student teaching.
· **EDUC-417 Assessment Theory and Practice**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course examines the development of formative, summative, authentic, and alternative assessment in education. Seminal works by Archbald, Baron, Bloom, Kleinsasser, Schwab, and others comprise the theoretical component. The second half of the course is dedicated to the selection, application, and integration of formal and informal assessment strategies and tools. A final project requires students to design an assessment tool appropriate for their academic area and age level. Instructional strategies include case studies, class discussions, student presentations, and research reviews.

· **EDUC-424 Global Issues and Trends in American Education**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

2016-2017 Archived Catalog Information

English

English majors and minors benefit from a wide range of course offerings ranging from in-depth studies of specific literary periods and movements, to creative writing workshops, to traditional British and American surveys and genre-based courses. With plenty of chances to improve their reading and writing skills and sharpen their critical thinking, English majors and minors are prepared to enter almost any profession and excel due to their ability to interpret, compose, connect, and make meaning with written texts and an advanced ability to understand and craft language.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Major Requirements with Concentration Requirements: 11 courses, 41 credits
Major Requirements: 6 courses, 21 credits

Professional Development Requirement (1 course, 1 credit)

- CAS-201 College to Career: Explore Your Options And Find Your Path

Prerequisites:

CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

Credits:

1.00

Description:
This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

Literary History Surveys Requirement (4 courses, 16 credits)

- **ENG-213 English Literature I**
  
  Credits:

  4.00

  Description:

  Study of major writers of England from the beginning to the mid-18th century. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

  Term:

  Offered Both Fall and Spring

  Type:

  Humanities Literature Requirement

- **ENG-214 English Literature II**

  Credits:

  4.00

  Description:

  Study of major English writers from the mid-18th century to the present. Regularly assigned essays on the reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester.

  Term:

  Offered Both Fall and Spring

  Type:

  Humanities Literature Requirement

- **ENG-217 American Literature I**

  Credits:

  4.00
Study of major American writing from its origins through 1865. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:
Offered Both Fall and Spring

Type:
Humanities Literature Requirement

• ENG-218 American Literature II

Credits:
4.00

Description:
Study of major American writing from 1865 through the present. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct, and persuasive writing. Offered every semester.

Term:
Offered Both Fall and Spring

Type:
Humanities Literature Requirement

Diverse Literature Requirement (1 course, 4 credits)

The Diverse Literature requirement broadens a major's exposure to the growing historical and contemporary importance of voices outside the traditional Anglophone literary canon as constructed in English studies.

Choose one of the following:

• ENG-347 20th Century Female Gothic

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
This course focuses on Gothic literature by women writers, from its origins in the 18th century to the present, focusing primarily on 20th century writers. The novels, short stories, and films we will discuss involve haunted houses, secret chambers, madness, and other Gothic tropes. Writers to be studied will include Charlotte Bronte, Daphne du Maurier, Shirley Jackson, Jean Rhys, Angela Carter, and others.

- **ENG-357 African-American Literature I**

  **Prerequisites:**
  WRI-102 or WRI-H103

  **Credits:**
  4.00

  **Description:**
  African-American writing from the beginning through the present. Normally offered alternate years. Cultural Diversity A

  **Term:**
  Occasional

  **Type:**
  Cultural Diversity Opt A

- **ENG-359 Selected African-American Writers**

Cultural Diversity Opt B

**ENG-399 Irish Literature**

Prerequisites:

WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102

Credits:

4.00

Description:

Writers of the Irish Literary Revival, from the 1890s to the 1930s. Readings from Yeats, Joyce, Synge, O'Casey, and O'Flaherty. The influence of Anglo-Irish history on Irish writers. Normally offered every third year.

Term:

Occasional

**ENG-409 Literary Bloomsbury: Woolf and Forster**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.
Literature Before 1900 Requirement (1 course, 4 credits)

A required upper level Literature Before 1900 course ensures majors read, analyze, and interpret older texts in order to enhance their knowledge of the foundations of literary history.

Choose one of the following:

- **ENG-311 Medieval Literature Survey**
  
  **Prerequisites:**
  
  WRI-102 or WRI-H103
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  An introduction to medieval literature, this course will focus on short readings from various genres, such as the lyric, chronicle, fable, with emphasis on the romance. The culmination of the course is a drama segment in which students can participate in a performance.

- **ENG-323 Chaucer**
  
  **Prerequisites:**
  
  WRI-102 or WRI-H103
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Close reading and discussion of the Canterbury Tales and Troilus and Criseyde against the background of the late Middle Ages. Normally offered alternate years.
ENG-324 Shakespeare's Comedies

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
Shakespeare's background and development as a dramatist through an examination of selected comedies. Collateral reading of the minor plays and Shakespeare criticism. Normally offered every third semester.

Term:
Occasional

  Credits:
  4.00

  Description:
  Representative selections of seventeenth-century poetry and prose, including Behn, Burton, Donne Drayton, Dryden, Jonson, Milton, Pepys, Wroth, and others. Normally offered alternate years.

  Term:
  Occasional

• **ENG-336 Restoration and Eighteenth Century Literature**

  Prerequisites:
  WRI-102 or WRI-H103

  Credits:
  4.00
The great age of satire, essay, criticism, biography, and nature. Dryden, Pope, Swift, Addison, Steele, Boswell, Johnson, Gray, Thompson, and Gibbon. Normally offered alternate years.

Term:
Occasional

- **ENG-337 18th Century English Novel**

  Prerequisites:
  
  WRI-102 or WRI-H103
  
  Credits:
  
  4.00
  
  Description:
  
  The beginnings of the realistic novel including the works of Defoe, Richardson, Fielding, Smollet, and Burney and considering the sentimental novel (Sterne) and the gothic novel (Walpole and Radcliffe). Normally offered alternate years.

- **ENG-343 19th Century English Novel**

  Prerequisites:
  
  WRI-102 or WRI-H103
  
  Credits:
  
  4.00
  
  Description:
  

  Term:
  
  Occasional

- **ENG-344 English Romantic Literature**

  Prerequisites:
  
  WRI-102 or WRI-H103
  
  Credits:
Description:
The mind and spirit, poetics and poetry of Wordsworth, Coleridge, Byron, Shelley and Keats, along with selected prose. Normally offered alternate years.

Term:
Occasional

• **ENG-345 Victorian Literature**

  Prerequisites:
  WRI-102 or WRI-H103

  Credits:
  3.00

  Description:
The study of selected poets and prose writers. Some Victorian fiction. Normally offered alternate years

• **ENG-356 Whitman and Dickinson**

  Prerequisites:
  WRI-102 or WRI-H103

  Credits:
  4.00

  Description:
  An investigation of the lives and works of two of nineteenth-century America's greatest and most original poets. Topics will include types of poetic language and formal structure, the work of the poetic imagination in transforming observations of the world into art, and the ways in which poets process the idea of death and the reality of war. Finally, this course examines Whitman and Dickinson's impact on American popular culture as well as on the writings of modern poets and literary critics.

  Term:
  Occasional

• **ENG-424 Special Topics in Group 4: Literary History II : 1700-1900, American or British**

  Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:

A course that fits Group 4 of the English major requirements with varying subject matter. An interdisciplinary offering that features the writing of three of the late 19th century's greatest minds: Henry, the novelist who wrote The Portrait of a Lady, Daisy Miller, and The Turn of the Screw; William, the philosopher and psychologist who wrote Principles of Psychology (1890) and Varieties of Religious Experience (1902); and Alice, their sister, who became a feminist icon through her remarkable diary. A selection of these works will be explored alongside a James family biography.

Term:

Occasional

Electives (3 courses, 12 credits)

Choose two ENG electives at the 300-level or above.

Choose one elective from any ENG course numbered above 104.

Note: The Seminar for Freshmen may satisfy one of the electives at the discretion of the department.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
English majors and minors benefit from a wide range of course offerings ranging from in-depth studies of specific literary periods and movements, to creative writing workshops, to traditional British and American surveys and genre-based courses. With plenty of chances to improve their reading and writing skills and sharpen their critical thinking, English majors and minors are prepared to enter almost any profession and excel due to their ability to interpret, compose, connect, and make meaning with written texts and an advanced ability to understand and craft language.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

To be considered for honors in English, a student must satisfy the following criteria:

1. Students interested in honors should consult with the English department honors coordinator in the sophomore or junior year. Qualifying students must have a GPA of 3.5 or higher in English.

2. Honors students must complete ENG-301 and eight Honors credits in English, four credits of which are in addition to the major requirement of 36 credits. These eight credits would normally include one Honors Seminar and one Independent Study (ENG-510), wherein a student produces a major project under the direction of an advisor of his or her choice.

3. Honors students should register for one credit of ENG-510 (normally in the fall semester of the senior year), and for three credits of ENG-510 (normally in the spring semester of the senior year). Any student who completes ENG-510 will receive credit for the course; for achievement of honors in English, projects completed in ENG-510 must also be approved by the English department.

4. Honors students must complete their coursework in English with a GPA of 3.5 or higher.

5. In special circumstances (for example in the case of transfer students), exceptions to the requirements above will be considered.

- ENG-301 Seminar for English Majors

Prerequisites:
This course seeks to answer the following questions. What is literature? Why do we study literature? What methods aid the study of literature? What are English Studies all about? This course extends reading and writing skills, and provides more specialized terms, knowledge, and approaches to prepare students for study at the junior and senior level. Topics vary from term to term. Student must have completed 80 credits or less Normally offered Fall and Spring semesters.

Term:
Offered Both Fall and Spring

- **ENG-510 Independent Study**

  Prerequisites:

  WRI-102 or WRI-H103

  Credits:

  1.00- 4.00

  Description:

  By special arrangement, a junior or senior may pursue an independent research project under the supervision of a faculty member. Consent of instructor and chairperson required. Offered every semester.

  Term:

  Offered Both Fall and Spring
English majors and minors benefit from a wide range of course offerings ranging from in-depth studies of specific literary periods and movements, to creative writing workshops, to traditional British and American surveys and genre-based courses. With plenty of chances to improve their reading and writing skills and sharpen their critical thinking, English majors and minors are prepared to enter almost any profession and excel due to their ability to interpret, compose, connect, and make meaning with written texts and an advanced ability to understand and craft language.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Sigma Tau Delta International Honor Society

Sigma Tau Delta, a member of the Association of College Honor Societies (ACHS), established its Eta Upsilon Chapter at Suffolk University in January 1986. Active membership is open to both English majors and English minors who have completed a minimum of two college courses in English language or literature (beyond the First Year Writing requirement and sophomore English requirement) with an average of 3.5, plus a general cumulative average of 3.0. Associate membership is open to students who have the requisite academic background (as stipulated above for active membership) but who are not majoring or minoring in English. In addition to conferring distinction for high achievement in English language and literature and exhibiting high standards of academic excellence through its chapters, Sigma Tau Delta promotes and emphasizes the discipline of English in all its aspects, including creative and critical writing, by inviting both active and associate members to contribute to its national publication, *The Rectangle*. All inducted members remain permanently on the roster of the Eta Upsilon Chapter.

4.00

Description:

A study of literature written in English from cultures around the world, with emphasis on major modern and contemporary writers from countries such as Australia, Canada, India, Ireland, Nigeria, South Africa and the Caribbean. Regularly assigned essays on reading provide the basis for individualized instruction in clear, correct and persuasive writing. Offered every semester. Cultural Diversity B

ENG-141 Studies in British Literature

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

4.00

Description:

Study of poetry, prose, and drama from the British literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

ENG-142 Studies in American Literature

Prerequisites:

WRI-101, WRI-102 or WRI-H103
Study of poetry, prose, and drama from the American literary tradition, with emphasis on close reading and literary analysis. Students will compose formal essays discussing the meanings and relationship between texts as well as the author's craft and relationship to the reader. Offered every semester.

**ENG-151 Introduction to African-American Literature**

**Prerequisites:**

WRI-101 WRI-102 OR WRI-H103

**Credits:**

4.00

**Description:**

Literature has the capacity to record and interrogate history in an imaginative and artistic context. African-American literature is a rich, varied, and complex body of literature that faces our tainted history directly. The authors we will read in this class examine slavery's long-term psychological and social effects while forging a literary history that is at once a part of and apart from American literary history more generally.

**Type:**

Humanities Literature Requirement

**ENG-152 Horror Fiction**

**Prerequisites:**

WRI-101 WRI-102 or WRI-H103

**Credits:**

4.00

**Description:**

This course focuses on the reading and analysis of horror literature and the ways in which horror reflects and represents personal and cultural anxieties. Readings will include both classic and contemporary authors, for example, Edgar Allan Poe, H.P. Lovecraft, Shirley Jackson, Stephen King, and others. Assignments will include analytical essays as well as creative writing.

**Type:**

Humanities Literature Requirement
• ENG-153 Literature of War

WRI-101 WRI-102 or WRI-H103

Credits:

4.00

Type:

Humanities Literature Requirement

• ENG-155 Young Adult Literature

Prerequisites:

WRI-101, WRI-102 or WRI-H103

Credits:

4.00

Description:

Young Adult Literature's recent explosion in popularity raises important questions about the stories it tells, the values it promotes, and the audiences it seeks. This course approaches the YA phenomenon as one with deep historical roots as well as contemporary cultural relevance. From nineteenth century classics to current series favorites, literary works focused on young people reframe perennially fresh narratives about coming of age, negotiating personal identity, and navigating a complex moral universe. This course also considers YA literature as part of an evolving network of writers, readers, publishers, critics and filmmakers.

• ENG-157 Poetry and Religion

Credits:

4.00

Description:

This course will use close readings to examine poetry as a heightened form of language seeking to make contact with divine sources of faith. We will consider poems that provide examples of the struggle to attain belief, as well as poems that deny belief. Language as both the grammar of ascent and the locus of descent. The position of human beings in relation to God, or the gods, or the absence of the divine.

• ENG-161 Women Writing the West

Credits:

4.00
In 1893, Frederick Jackson Turner famously declared that the American frontier (i.e., the West) had closed for good. To a certain extent, Jackson's proclamation was meant to demarcate the end of the 19th century. But perhaps more importantly, it marks the beginning of a distinctly American literature that began, ironically, by mourning its own demise. In this course, we will journey among some of the more significant signposts and detours that have marked Western U.S. literature in the 20th Century. Along the way, we will question just where, exactly, the West begins and ends (The Mississippi River? The Great Plains? The Rockies?), and think about whether or not Turner's frontier thesis continues to hold true (if it ever did). We will consider whether the broad rubric of The West is adequate to describe the various sub-regions within this portion of the United States, and we'll examine the genres which seem as if they could not have happened anywhere else. We will also interrogate differences in the literature across gender lines: how, if at all, does the literature written by men and by women differ? Above all, we will strive to come away with a deeper understanding of this vitally American, and vitally Wild literary place.

- ENG-212 Introduction to Creative Writing

  Credits:
  4.00

  Description:

  A study of the major genres in creative writing (poetry, fiction, and creative nonfiction) in which students will read as writers. Students will write a combination of analytical and original works, and learn the format and processes of writing workshops. Offered every semester.

- ENG-213 English Literature I

  Type:  
  Humanities Literature Requirement,Honors

• **ENG-266 Mad Men: Reading Visual Narratives**

  Credits:  
  4.00

  Description:

  This course will focus on the cultural phenomenon of the TV Series Mad Men, considered by many to be the foremost example of Quality TV produced during the so-called golden age of television and engage with it on visual, cultural, literary and filmic levels. The basic premise of the course is that the current practice of binge watching one’s favorite shows should be a heightened experience rather than a guilty pleasure, one akin to
reading a novel. Watching a complex and sophisticated TV narrative involves taking into account the viewer's positionality as a filmic consumer, textual critic and social commentator. The class will consider various theoretical approaches to television narrative, beginning with ideas gleaned from the discourse of visual literacy, and proceed by applying textual analysis adapted from the more traditional modes of literary studies and film analysis. A combination of critical and evaluative sources will be examined, including book-length studies of the series, individual essays based on the series' appeal to style, American popular culture, advertising, gender roles, race, and 60s nostalgia. Additionally, the recent phenomenon of the series recap will serve as the touchstone to the class's collective viewing of the series and students will be challenged to synthesize and assess these popular online critiques as they draft their own recaps and creative readings of the episodes. The entire first two seasons of Mad Men will be studied and the invaluable resource of director/producer commentaries will be incorporated into the study of the series with a view to acquiring critical insights and analytical skills that may be applied to other quality TV series that students currently enjoy watching.

Type:
Vis. & Perform Thry & Hst

- ENG-H266 Mad Men: Reading Visual Narratives

Prerequisites:
Restricted to CAS Honor Students

Credits:
4.00

**ENG-370 Fiction Writing Workshop I**

Prerequisites:

ENG-212

Credits:

4.00

Description:
An intensive workshop in which the student will be required to write original fiction. The focus of the course will be on the student's own work, submitted on a weekly basis. The course will also provide the student writer with practical experience in matters of plot, character, dialogue, structure, etc. Normally offered annually.

Term:
Alternates Fall & Spring

**ENG-371 Creative Non-Fiction Workshop**

Prerequisites:
ENG-212

Credits:
4.00

Description:
For students interested in writing autobiography and/or other forms of the personal essay. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. The student should plan to read models of creative non-fiction. Normally offered annually.

Term:
Occasional

**ENG-372 The Literary Journal**

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
An exploration of selected literary journals and their role in American letters. Through our study of the Pushcart prize anthology and past and current issues of journals such as Agni, Antaeus, Callaloo, Georgia Review, Paris Review, Poetry, and Zoetrope, we will examine the ways in which journals both respond to and shape literary culture. Students will write a research paper on an essayist, poet, or story writer that they discover during this course. Taught by the editor of a Boston-area literary journal.

Term:
Occasional

**ENG-373 English Writers of the 1930S**
Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
The social, political and cultural revolution in pre-World War II England as it is reflected in the poetry of Auden and Spender and the fiction of Huxley, Waugh, Isherwood, Bowen, Orwell, and Greene. Normally offered every third year.

Term:
Occasional

- **ENG-374 Drama Seminar**

  Prerequisites:
  WRI-102 or WRI-H103 with a minimum grade of B+

  Credits:
  4.00

  Description:
  Discussion and presentations on a pre-announced subject: a major playwright, a dramatic movement or genre, or the relation between script and performance. Normally offered every third year.

  Term:
  Occasional

- **ENG-375 Poetry Writing Workshop I**

  Prerequisites:
  ENG-212

  Credits:
  4.00

  Description:
  An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on the student's own work. We will examine the highly individual processes of composition and revision, and the methods writers use to keep their own practice of poetry alive and well. We will
also examine as many of the constituent elements of poetry as possible, from image and rhythm to line and structure. Normally offered annually.

Term:
Offered Both Fall and Spring

- **ENG-376 Literary Publishing**
  
  **Prerequisites:**
  
  WRI-102 or WRI-H103

  **Credits:**
  
  4.00

- **ENG-377 The World of Literature on Film**
  
  **Prerequisites:**
  
  WRI-102 or WRI-H103

  **Credits:**
  
  4.00

  **Description:**
  
  Examination of film as an art form in the expression of literature. Several films to be viewed in class together with the relevant literary works. Normally offered every third year.

  **Term:**
  
  Occasional

- **ENG-386 Classics of Mystery**
  
  **Prerequisites:**
  
  WRI-102 or WRI-H103

  **Credits:**
  
  4.00

  **Description:**
  
  Classic stories of suspense and detection, including short stories and novels by Poe, Doyle, Chandler, Hammett, Christie, and others. Current examples also to be included. Normally offered alternate years.

  **Term:**
• **ENG-387 Writing Women**

  **Prerequisites:**

  WRI-102 or WRI-H103

  **Credits:**

  4.00

  **Description:**

  This course studies 19th and 20th century women writers and questions the type of women who write, what they write about, and why they write. Themes we examine include domesticity, assimilation, and madness. Authors studied in the past have included Edith Wharton, Willa Cather, Anzia Yezierska, Nella Larsen, and Sylvia Plath. Normally offered alternate years. Cultural Diversity A

  **Term:**

  Occasional

  **Type:**

  Cultural Diversity Opt A

• **ENG-388 Utopias and Dystopias**

  **Prerequisites:**

  WRI-102 or WRI-H103

  **Credits:**

  4.00

  **Description:**

  This course follows the spirit of utopian experimentation as it travels through the linguistic patterns and imaginative conditions of brave new worlds in literature. We will consider how utopian thinking allows writers to take creative license with political systems, social relations, gender roles, and racial identities, and to blur dividing lines between nature, technology, and culture as well as between Earth and the cosmos. Our readings will balance such foundational texts as Plato's Republic and More's Utopia with revolutionary works from the nineteenth through the twenty-first centuries, and conjure utopian dreams as well as dystopian worlds gone wrong. Selected works of literary criticism and films will also be included.

• **ENG-390 Writing Process and Revision**

  **Prerequisites:**

  Any ENG course except for WRI-101
This course studies the expressive and cognitive approaches to the writing process through personal journal writing, metaphor use and a review of grammar and stylistics. Written assignments emphasize discovery and invention as well as the revising of academic prose. Normally offered every other year.

Term:

Occasional

• ENG-392 Readings in Post-Colonial Literature

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

An Exploration of Post-colonial literature and how the empire writes back following the collapse of European colonialism. Special emphasis will be placed on the legacy of British Colonial rule and the contemporary use of literature and the English Language to both resist and problematize Eurocentric cultural assumptions. Authors studied will include E.M. Foster, Salman Rushdie, J.M. Coetzee, Anita Desai, Hanif Kureishi, and Zadie Smith, among others. Students will be introduced to Post-colonial critical theory and view film adaptations of literary texts.

Term:

Occasional

Type:

Cultural Diversity Opt B

• ENG-394 Critical Prose

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:
This course studies both the literary and rhetorical modes of expository essay writing. Readings will focus on the craft of writing, the art of revision and reflections on the reader-writer relationship. Students will be asked to analyze prose passages, compose critical essays and work in peer groups. Normally offered alternate years.

Term:
Occasional

- ENG-395 Rhetoric and Memoir

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
This course examines the rhetoric of memoirs written primarily by international figures who seek to use personal stories to shape readers' perspectives on political issues. After a brief introduction to rhetorical theory and to the genre of memoir, this course will examine contemporary memoirs that address such issues as racism, sexism, religious extremism, war, and genocide.

Term:
Occasional

Type:
Cultural Diversity Opt B

- ENG-396 Varieties of Workplace Writing

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
This course studies a variety of workplace writing including summaries, memos, letters, directions, descriptions, reports and other technical and professional documents. Students may be required to complete certain assignments in collaborative teams. Document design and layout will also be emphasized. Normally offered alternate years.

Term:
Occasional
• ENG-398 Boston: a City in Fiction
  Prerequisites:
  WRI-102 or WRI-H103
  Credits:
  4.00
  Description:
  Boston in novels from its beginning to the present: plan of the city, architecture, population, social classes, politics and human problems. Hawthorne, James, Howells, Jean Stafford, Edwin O'Connor, Dorothy West, and others.
  Term:
  Occasional

• ENG-399 Irish Literature
  Prerequisites:
  WRI-H103 (WRI-H103 requires a minimum grade of B+) or WRI-102
  Credits:
  4.00
  Description:
  Writers of the Irish Literary Revival, from the 1890s to the 1930s. Readings from Yeats, Joyce, Synge, O'Casey, and O'Flaherty. The influence of Anglo-Irish history on Irish writers. Normally offered every third year.
  Term:
  Occasional

• ENG-407 Literary Theory
  Prerequisites:
  WRI-102 or WRI-H103
  Credits:
  4.00
  Description:
  A seminar on current approaches to the interpretation of literature, including psychoanalysis, deconstruction and feminist criticism. Students will experiment with making use of theory in analyzing selected literary texts.
• **ENG-408 Modern Greek Literature in English Translation**

Prerequisites:

WRI-102 or WRI-H103 with a minimum grade of B+

Credits:

4.00

Description:

A survey of writings in Modern Greek from 1821 to the present exploring Hellenism and the Greek cultural identity. Authors studied will include Kostis Palamas, Georgios Vizyinos, Alexandros Papadiamantis, Stratis Myrivilis, Photis Kontoglou, Dido Sotiriou, George Seferis, Constantine Cavafy, and Odysseas Elytis. A section of the syllabus will be reserved for the Greek-American/diaspora writers Helen Papanikolas, Elia Kazan, Jeffrey Eugenides, Olga Broumas, and Tryfon Tolides. Films and music traditions will be sampled as well.

• **ENG-409 Literary Bloomsbury: Woolf and Forster**

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.

Term:

Occasional

• **ENG-410 From Pagan Reason to Christian Revelation**

Prerequisites:

WRI-102 or WRI-H103
A survey of major works of literature and thought crucial to the transformation of pagan models of reason to Christian systems of belief, including works by Plato and Plotinus, St. Augustine and Dante. Of central concern is the changing conception of love, from Eros to Agape. Cross-listed with History 336.

Term:
Occasional

• ENG-421 Special Topics in Group 1: Approaches To English Studies

Prerequisites:
ENG 213, ENG 214, ENG 215, ENG 216, ENG 217, or ENG 218

Credits:
4.00

Description:
A course that fits Group 1 of the English major requirements with varying subject matter.

Term:
Occasional

• ENG-422 Special Topics in Group 2: Genre and Backgrounds

Prerequisites:
Any 200-level English course

Credits:
4.00

Description:
A course that fits Group 2 of the English major requirements with varying subject matter.

Term:
Occasional

• ENG-424 Special Topics in Group 4: Literary History II : 1700-1900, American or British
Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
A course that fits Group 4 of the English major requirements with varying subject matter. A interdisciplinary offering that features the writing of three of the late 19th century's greatest minds: Henry, the novelist who wrote The Portrait of a Lady, Daisy Miller, and The Turn of the Screw; William, the philosopher and psychologist who wrote Principles of Psychology (1890) and Varieties of Religious Experience (1902); and Alice, their sister, who became a feminist icon through her remarkable diary. A selection of these works will be explored alongside a James family biography.

Term:
Occasional

• ENG-425 Special Topics in Group 5: Literary History III: 1900- Present American, British, Or World

Prerequisites:
Any 200-level English course

Credits:
4.00

Description:
A course that fits Group 5 of the English major requirements with varying subject matter.

Term:
Occasional

• ENG-427 The Georgics of Virgil

Prerequisites:
Any 200-level English course

Credits:
1.00

Description:
A study of these poems by the Roman poet with a focus on the issues of translation.
• ENG-428 Virgil's Aeneid: First Three Books

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

A week by week reading of the Mesopotamian Epic that predates the Iliad by one thousand years, and is a masterpiece of heroic endurance and tragic insight. Discussions will be led by David Ferry, whose beautiful translation the class will use as text.

• ENG-429 Classic Literature of the Underworld

Prerequisites:

WRI-102 or WRI-H103

Credits:

1.00

Description:

This course will conduct close reading and discussion of selections from classical Greek and Roman texts, as well as from ancient Mesopotamian texts, highlighting passages that trace the descent to the underworld. Some of these readings include: the realm of the shades in Gilgamesh, the myth of Orpheus and Eurydice in Virgil, Homer's Odysseus and Achilles in Hades, the source of the River Styx in Pausanias.

• ENG-430 Literature of the Vietnam War and the Post 9/11 Wars

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course will examine some of the fiction, non-fiction, and poetry produced in response to the Vietnam War and the most recent war in Iraq. In addition to comparing the literature that has emerged from these two very different wars, these texts will also be examined in relation to peace studies, a field in which there is an emerging consensus that literature and the arts must play a central role in examining questions of war and peace.

Term:
• ENG-431 Studies in Postmodern Fiction

Prerequisites:

WRI-102 or WRI-H103

Credits:

4.00

Description:

This course introduces students to the innovations that have re-defined fiction following the modern period. Novelists will include significant writers (3 Nobel Laureates among them) of the 20th/21st century, including Borges, Kundera, Calvino, Saramago, Garcia Marquez, Vargas Llosa.

• ENG-432 Classical Greek and Roman Poetry

Prerequisites:

Any 200 level ENG course.

Credits:

1.00

Description:

Readings from major poems by the Greek and Roman poets of the ancient and classical periods. Works include: Sappho's lyric poems, Pindar's Odes, Horace's Odes, Virgil's Eclogues and Georgics, selections from the Aeneid and the Iliad.

• ENG-440 The Odes of Horace

Prerequisites:

Any 200-level English course

Credits:

1.00

Description:

This course represents a journey through the poetry of Horace, contemporary of Virgil and celebrated poet of the Pax Romana. Discussions will be led by David Ferry, whose beautiful translation of Horace's poetry the class will use as text.

• ENG-470 Fiction Workshop II
Prerequisites:
Any 200-level English course

Credits:
4.00

Description:
An intensive practical examination of plot, narrative, characterization, and style in the writing of fiction and/or creative non-fiction. Particular attention will be devoted to group discussion of weekly student writing assignments. Normally offered alternate years.

Term:
Alternates Fall & Spring

• **ENG-471 Advanced Nonfiction Workshop**

  Prerequisites:
  Any 200-level English course

  Credits:
  4.00

  Description:
  An advanced course in non-fiction writing that focuses intensively on developing non-fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to non-fiction writers. Topics can include childhood, place, sexuality, religion, work, the nature of memory. The focus will be on the writing process, with students presenting work-in-progress to the class for discussion and revision. Normally offered annually.

• **ENG-475 Poetry Workshop II**

  Prerequisites:
  Any 200-level English course

  Credits:
  4.00

  Description:
  An intensive workshop course in which the student will be required to write original poetry for each class meeting. The focus of the course will be on both the quantity and quality of the student's own work. There will also be specific assignments in the many formal elements of the art. Written self-evaluations will also be required. Normally offered in alternate years.
Term:
Offered Spring Term

- **ENG-476 Salamander Practicum**
  
  Prerequisites:
  Take ENG-212
  
  Credits:
  4.00
  
  Description:
  Salamander is a nationally known professional literary journal published from the Suffolk University English Department. In the Salamander Practicum course, students serve as first evaluators of submissions to the magazine, including poetry, fiction, and memoir. They will compare and discuss their evaluations and make recommendations to the editorial board and assist with magazine production, marketing, and event planning. Students will study and write literary analyses of works included in Salamander and in other professional literary journals, such as Ploughshares, Agni, One Story, and the Harvard Review.

- **ENG-480 Fiction Writing Workshop III**
  
  Prerequisites:
  Any 200-level English course
  
  Credits:
  4.00
  
  Description:
  An advanced course in fiction writing that focuses intensively on developing fiction through weekly group discussions of student writing. Particular attention will be devoted toward deepening and expanding the range of possibilities available to fiction writers.

- **ENG-490 Imperial Rome**
  
  Prerequisites:
  WRI-102 or WRI-H103
  
  Credits:
  4.00
  
  Description:
This course offers an introduction to the Golden Age of Roman culture and power. Close readings of selections from major historians, poets, political thinkers, and philosophers will be examined in the context of Augustan Rome. Topics such as pietas, virtus, and gravitas, as well as the competing claims of public duty and private devotion, stoic maxim and erotic love lyric, will be discussed from the perspectives of writers such as Virgil, Livy, Tacitus, Horace, Catullus, and Lucretius. Note: This course is identical to HUM 304. Normally offered in alternate years.

Type:

Humanities & History

- **ENG-510 Independent Study**

  Prerequisites:

  WRI-102 or WRI-H103

  Credits:

  1.00- 4.00

  Description:

  By special arrangement, a junior or senior may pursue an independent research project under the supervision of a faculty member. Consent of instructor and chairperson required. Offered every semester.

  Term:

  Offered Both Fall and Spring

- **ENG-514 Internship in English**

  Prerequisites:

  WRI-102 or WRI-H103

  Credits:

  2.00

  Description:

  Individualized guidance in a career-related activity. Upper-class English majors may gain academic credit for work preparing them for an English-related career, provided that the work is monitored by a member of the English faculty. Department approval is required.

  Term:

  Occasional

  Type:

  Expanded Classroom Requirement
• **ENG-515 Salamander Internship**

  Prerequisites:
  
  WRI-102 or WRI-H103
  
  Credits:
  
  1.00
  
  Description:
  
  A semester-long internship working with the Editor and Managing Editor of Salamander Literary Magazine. Students will gain experience in editing, layout, and production of one of two annual editions of Salamander.
  
  Type:
  
  Expanded Classroom Requirement

• **ENG-H523 Honors Seminar in Group 3: Literary History I: Medieval to Renaissance**

  Prerequisites:
  
  ENG 213, 214, 215, 216, 217 OR 218 Admission By Invitation Only
  
  Credits:
  
  4.00
  
  Description:
  
  Honors seminar that fulfills Group 3 of the English major.
  
  Type:
  
  Honors

• **ENG-H524 Honors Seminar in Group 4: Literary History II: 1700 - 1900, American Or British**

  Prerequisites:
  
  ENG-213, 214, 215, 216, 217 OR ENG 218 Admission by invitation only
  
  Credits:
  
  4.00
  
  Description:
  
  Honors seminar that fulfills Group I of the English major.
- **ENG-H525 Honors Seminar in Group 5 Literary History III: 1900 - Present American, British, Or World.**

  Prerequisites:
  
  ENG 213, 214, 215, 216, 217, or ENG 218; Invitation only

  Credits:
  
  4.00

  Description:

  Honors seminar that fulfills Group I of the English major.

- **WRI-101 First Year Writing I**

  Credits:
  
  4.00

  Description:

  Study and practice of the writing process and revision in terms of expository writing modes for an academic audience.

- **WRI-L101 Developmental Writing 101 Lab**

  Credits:
  
  0.00

  Description:

  A non credit course for students enrolled in Freshman Composition who need to improve their control of the writing process, English mechanics, and fluency of expression. WRI L101 is a hybrid course that combines online grammar and writing practice with face-to-face support from English instructors.

- **WRI-102 First Year Writing II**

  Prerequisites:
  
  WRI-101 or ENG-099 with at least a B and ENG-P099 with a P or WRI-H103
Credits:
4.00

Description:
Study and practice of argumentative and research writing through further work with writing process and revision and the critical reading of a variety of texts.

**WRI-H103 Advanced First Year Writing**

Prerequisites:
By Invitation Only.

Credits:
4.00

Description:
This course is by invitation only and reserved for incoming Suffolk students with high admission scores. Advanced study and practice of writing process, revision, and research, based on close readings of a variety of texts. Fall semester only.

Type:
Honors
Environmental Science

The Center for Urban Ecology & Sustainability (CUES) offers a major in Environmental Science which allows students to develop a broad background in biology, chemistry, and physics with complementary emphasis on the science of environment and environmental ethics, policy, and regulation.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Environmental Science Courses

Major Requirements: 17 courses and corresponding laboratories where applicable, 65 credits

CUES Shared Core Requirements (6 courses and corresponding laboratories where applicable, 21 credits)

- UES-101 Environmental Studies

  Credits:

  4.00

  Description:

  Focuses on the natural environment through the lens of social science and humanities. Students will study texts from those disciplines to acquire a deeper understanding of the values and beliefs that underlie environmental issues. Students will investigate the policy-making processes and institutions through which those issues are decided, and the social inequalities in the distribution of environmental problems. Texts to be studied will range from literature, philosophy, and film to policy statements, impact reports, community advocacy materials, and investigative journalism.

  Term:

  Offered Fall Term
UES-111 Majors' Environmental Science

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with UES-L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

UES-L111 Majors' Environmental Science Lab

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with UES-111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

UES-225 Geographical Information Science

Prerequisites:
提供地理信息系统（GIS）的 fundamentals 包括自动化制图的历史。对 GIS 中使用的必要的硬件和软件元素进行概述。要求使用计算机制图软件进行实践练习。

类型:

SCI TECH ENGNR

- UES-L225 地理信息科学实验室

先修课程:

CMPSC-F131. 必须与 UES-225 同步

学分:

1.00

描述:

与 UES 225 同步的配套计算机实验室。

类型:

SCI TECH ENGNR

- UES-401 环境研究学士课程

学分:

4.00

描述:

探讨了一个当代环境问题的发展。学生将从多个角度（例如政策、伦理、环境正义、科学和文化）开发一个提案来解决一个已识别的问题。如果合适，提案将被实地测试、展示或呈现在当地社区。

- UES-511 专业发展模块

先修课程:

环境研究或环境科学专业或辅修，大三年级
Description:

Analyzes students' interests, skills, values, and experiences in the context of career planning for the environmental fields. Provides understanding of how to present professional accomplishments, conduct a job search, or prepare for graduate work.

Choose one of the following courses:

- **STATS-250 Applied Statistics**

  Prerequisites:

  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

  Credits:

  4.00

  Description:

  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

  Type:

  Quantitative Reasoning

- **BIO-273 Biostatistics**

  Prerequisites:

  BIO 111/L111

  Credits:

  4.00

  Description:

  Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.
Environmental Science Core Requirements (6 courses and corresponding laboratories where applicable, 24 credits)

- **BIO-114 Organismal Biology**
  
  **Prerequisites:**
  
  Must take BIO L114 concurrently.
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**
  
  **Prerequisites:**
  
  Must take BIO 114 concurrently
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  A series of laboratory experiences in evolution, diversity, anatomy and physiology.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
• CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:

Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• CHEM-L111 General Chemistry Laboratory I

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:
• CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:

3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• CHEM-L112 General Chemistry Laboratory II

Prerequisites:

MATH-T-MPEL0 MATH-T-MPEL1 MATH-T-MPEL2 MATH-T-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:

1.00

Description:

This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS
• UES-255 Chemistry and the Environment

Prerequisites:
CHEM 112/L112 or permission of instructor and UES L255

Credits:
3.00

Description:
Investigates the chemical processes (including biologically mediated ones) that affect the cycling and ultimate fate of chemicals in the environment (air, water, and soil). Remediation and treatment methods used to minimize pollutant loads and mitigate their impacts are considered.

• UES-L255 Chemistry and the Environment Laboratory

Prerequisites:
CHEM 112/L112 or permission of instructor and UES 255.

Credits:
1.00

Description:
Illustrates chemical processes in the environment and the methods of analysis of contaminants via laboratory exercises and application of instrumental techniques.

Choose one of the following sequences:

• PHYS-111 College Physics I

Prerequisites:
Take MATH-121 or MATH-134 or permission of Physics department chair;PHYS L111 taken concurrently

Credits:
3.00

Description:
Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:
Offered Fall Term
• PHYS-L111 College Physics Lab I

Prerequisites:
PHYS 111 concurrently

Credits:
1.00

Description:
Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-112 College Physics II

Prerequisites:
PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:
3.00

Description:
Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR
PHYS-L112 College Physics Lab II

Prerequisites:
PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:
1.00

Description:
Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

Or:

PHYS-151 University Physics I

Prerequisites:
MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:
3.00

Description:
Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

PHYS-L151 University Physics Lab I

Prerequisites:
PHYS 151 concurrently

Credits:
1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-152 University Physics II
  
  Prerequisites:
  PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

  Credits:
  3.00

  Description:
  This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

  Term:
  Offered Both Fall and Spring

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-L152 University Physics Lab II
  
  Prerequisites:
  PHYS 151 and L151 and PHYS 152 must be taken concurrently

  Credits:
  1.00
The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

Environmental Studies Elective Requirements (2 courses, 8 credits)

Choose two of the following courses with one at the 300-level or higher:

- **EC-131 Environmental Economics**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.
  
  **Type:**
  
  Social Science, BSJ SOCIAL SCIENCE

- **EC-151 Economic & Human Geography**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B
• ENT-352 Green and Sustainable Business

Prerequisites:
ENT-101 and Junior Standing

Credits:
3.00

Description:
Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business: improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:
Offered Spring Term

• GVT-223 American Politics & Institutions

Prerequisites:
GVT 110 or GVT 120 or instructor's permission

Credits:
4.00

Description:
This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:
Social Science,BSJ SOCIAL SCIENCE
• GVT-224 Introduction to Public Policy

Prerequisites:
GVT 110 and GVT 120 or instructor's permission

Credits:
4.00

Description:
An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:
Social Science, BSJ SOCIAL SCIENCE

• P.AD-362 Global Health, Poverty & Warming

Prerequisites:
SIB 101 or HST 149 or HST 150 or Instructor permission

Credits:
3.00

Description:
Global health, global poverty, and global warming are three interrelated issues that are creating a perfect storm of crises worldwide with major impacts on the United States. This course is an overview of the problems - the needs, systems, programs, and financing. We will look critically at policies in these areas and discuss what needs to be done to address them. Students will write a major paper on an issue of their choice.

Type:
Global Engagement Experience

• PHIL-362 Environmental Ethics

Prerequisites:
PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:
4.00

Description:
An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:
Occasional

- UES-301 Issues in Environmental Justice

Credits:
4.00

Description:
Investigates the environmental justice movement, its basis in law, and its leaders. Students will study key topics pertaining to environmental and health disparities and learn about community organizing and advocacy and their application to shape decision-making. Sustainable practices and their integration into daily life to create healthy communities and equity will be considered.

- UES-310 The Civilian Conservation Corps and the American Landscape

Prerequisites:
Class will meet for 75 minutes a week and then travel over spring break. Instructor's consent is required

Credits:
4.00

Description:
Focuses on the history and lasting effect of the Civilian Conservation Corps (CCC) on the physical and political landscape of the United States. Tracks the progression of work of the more than 3 million men who served in the CCC from 1933 to 1942, from the planting of billions of trees to the development of recreational opportunities on federal and state lands. Looks at the role the CCC played in redefining conservation and creating a mainstream environmental movement. Investigates the lasting legacy that the CCC left on the American landscape through the development of other conservation corps programs. Connected with a required Alternative Spring Break trip, this experiential education offering will allow students to experience and complete similar work to that completed by CCC members.

Term:
Offered Spring Term

Type:
Expanded Classroom Requirement,Local Engagement Experience
UES-321 Introduction to Permaculture

Credits: 4.00

Description:
Permaculture is the design of food systems and social structures to provide for human needs while restoring ecosystem health. Examining the interconnections between environmental, social and economic components, Permaculture is informed by the disciplines of systems ecology, ecological design and ethno-ecology.

Term:
Offered Spring Term

Advanced Science Requirements (3 courses and corresponding laboratories where applicable, 12 credits)

Choose three of the following:

- **BIO-333 Ecology**
  
  Prerequisites: BIO-114/L114; BIO-L333 concurrently;
  
  Credits: 3.00
  
  Description:
  Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

  Term:
  Offered Fall Term

- **BIO-L333 Ecology Lab**

  Prerequisites: BIO-114, BIO-L114, and BIO-333 concurrently

  Credits: 1.00

  Description:
Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:
Offered Fall Term

• **BIO-343 Biodiversity & Conservation Biology**

  Prerequisites:
  BIO-114 and BIO-L114

  Credits:
  4.00

  Description:
  This course covers a broad spectrum of aspects of biodiversity and conservation by examining key elements ranging from global patterns in the distribution of life on our planet to the effects our human population is causing on those patterns. Examples from marine and terrestrial animals and plants are used to convey current ideas with a focus on the importance of global biodiversity, and the design of management programs for the conservation of species and ecosystems. 4-credit

• **CHEM-375 Advanced Inorganic Chemistry**

  Prerequisites:
  CHEM 314/L314

  Credits:
  3.00

  Description:
  Topics in inorganic chemistry including bonding theories, chemical structures, symmetry and group theory, kinetics and mechanisms of reactions, and spectroscopy. Advanced topics may include bioinorganic chemistry, or organometallics.

  Term:
  Offered Every Other Year

• **CHEM-L375 Advanced Inorganic Laboratory**

  Prerequisites:
  CHEM 375 must be taken concurrently

  Credits:
1.00

Description:

Laboratory exercises designed to illustrate principles covered by topics in CHEM 375. Prior or concurrent enrollment in CHEM 375 required.

Term:

Offered Every Other Year

• CHEM-453 Introduction to Toxicology

Prerequisites:

CHEM-331 or instructor's consent

Credits:

3.00

Description:

The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and target organ toxicity. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology.

Term:

Offered Every Other Year

Math Requirement (1 course, 4 credits)

Choose one of the following:

• MATH-134 Calculus for Management & Social Sciences

Prerequisites:

MATH-104, MATH-121 or MATH level 4

Credits:

4.00

Description:

A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit
differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**

  **Prerequisites:**
  
  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5
  
  **Credits:**
  4.00
  
  **Description:**
  
  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Any math course above MATH-165 may also be chosen.

Students who have taken MATH-165 are encouraged to take PHYS-151/L151 and PHYS-152/L152. Students considering graduate school are encouraged to take MATH-165 and MATH-166.

**Internship Option**

Internships may be approved for credit by the CUES director. An approved internship for 3- or 4- credits may be used as a concentration course option at the discretion of the CUES director.

- **UES-503 Local Internship**

  **Prerequisites:**
  
  Environmental Science and Environmental Studies majors and minors only with junior standing.
  
  **Credits:**
  1.00- 4.00
  
  **Description:**
  
  Application of the principles and techniques of environmental science or studies to a specific environmental problem through a local internship placement of 10 hours per week (minimum) for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency or NGO.
Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

- UES-505 Global Internship

Credits:
1.00-4.00

Description:
Application of the principles and techniques of environmental science or studies to a specific environmental problem through a global internship placement of 10 hours per week (minimum) for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency or NGO.

Term:
Offered Both Fall and Spring

Note: Certain courses required of the major will also meet core curriculum requirements and can be double-counted. Electives not currently listed may be accepted at the discretion of the CUES director.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Environmental Science

The Center for Urban Ecology & Sustainability (CUES) offers a major in Environmental Science which allows students to develop a broad background in biology, chemistry, and physics with complementary emphasis on the science of environment and environmental ethics, policy, and regulation.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Major Requirements**
- **Minor Requirements**
- **Honors**
- **Environmental Science Courses**

**Minor Requirements: 6 courses, 24 credits**

The Environmental Science minor has three required courses and three additional courses demonstrating an emphasis in biology or chemistry.

**Core Requirements (3 courses and corresponding laboratories where applicable, 12 credits)**

- **UES-111 Majors' Environmental Science**

  **Prerequisites:**

  Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with UES-L111

  **Credits:**

  3.00

  **Description:**

  Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

  **Term:**

  Offered Spring Term
UES-L111 Majors' Environmental Science Lab

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with UES-111

Credits:

1.00

Description:

Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:

Offered Spring Term

UES-225 Geographical Information Science

Prerequisites:

CMPSC-F131.

Credits:

3.00

Description:

Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:

SCI TECH ENGNR

UES-L225 Geographic Information Science Lab

Prerequisites:
CMPSC-F131. Must be taken concurrently with UES-225

Credits:
1.00

Description:
Required companion computer laboratory to be taken concurrently with UES 225.

Type:
SCI TECH ENGNR

PHIL-362 Environmental Ethics

Prerequisites:
PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:
4.00

Description:
An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every year.

Term:
Occasional

Electives (3 courses and corresponding laboratories where applicable, 12 credits)

Choose one of the following options:

Biology Option

- BIO-114 Organismal Biology

Prerequisites:
Must take BIO L114 concurrently.

Credits:
3.00
Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-L114 Organismal Biology Laboratory

Prerequisites:
Must take BIO 114 concurrently

Credits:
1.00

Description:
A series of laboratory experiences in evolution, diversity, anatomy and physiology.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-333 Ecology

Prerequisites:
BIO-114/L114; BIO-L333 concurrently;

Credits:
3.00

Description:
Areas of study include but are not limited to basic principles of population biology, community ecology, trophic dynamics, ecosystem structure and function and evolutionary theory.

Term:
Offered Fall Term
• BIO-L333 Ecology Lab

Prerequisites:

BIO-114, BIO-L114, and BIO-333 concurrently

Credits:

1.00

Description:

Field and laboratory experiences in techniques and concepts relevant to ecological theory, data collection, statistical analysis, visual representation and report preparation.

Term:

Offered Fall Term

• BIO-343 Biodiversity & Conservation Biology

Prerequisites:

BIO-114 and BIO-L114

Credits:

4.00

Description:

This course covers a broad spectrum of aspects of biodiversity and conservation by examining key elements ranging from global patterns in the distribution of life on our planet to the effects our human population is causing on those patterns. Examples from marine and terrestrial animals and plants are used to convey current ideas with a focus on the importance of global biodiversity, and the design of management programs for the conservation of species and ecosystems. 4-credit

Chemistry Option

• CHEM-111 General Chemistry I

Prerequisites:

Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

Credits:

3.00

Description:
Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR

• CHEM-L111 General Chemistry Laboratory I

Prerequisites:
MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:
1.00

Description:
Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR

• CHEM-112 General Chemistry II

Prerequisites:
CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:
3.00

Description:
This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

• **CHEM-L112 General Chemistry Laboratory II**

   **Prerequisites:**

   MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

   **Credits:**

   1.00

   **Description:**

   This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer’s Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

   Term:

   Offered Both Fall and Spring

   Type:

   NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Environmental Science

The Center for Urban Ecology & Sustainability (CUES) offers a major in Environmental Science which allows students to develop a broad background in biology, chemistry, and physics with complementary emphasis on the science of environment and environmental ethics, policy, and regulation.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Environmental Science Courses

The Center for Urban Ecology and Sustainability offers an honors program. Students participating in the program must meet the following criteria:

1. Students must have an overall GPA of 3.5 or higher and a GPA in the major of 3.5 or higher.
2. Honors candidates must be invited by the CUES Honors Advisory Committee and should register for at least four credits of UES-555 Honors Thesis.
3. Participants will develop and complete an independent study project under the supervision of a member of the CUES Honors Advisory Committee. Depending on the nature of the project, the study may be conducted on or off campus, or involve a combination of both.
4. To successfully complete the project, a student will be required to develop and defend a thesis to the CUES Honors Advisory Committee and to present findings in a colloquium.

- UES-555 Senior Thesis

Prerequisites:

Grade point average 3.0 overall, 3.4 in major; completion of a minimum of 8 credits in courses that are part of the Environmental Studies major at Suffolk University; consent of instructor.

Credits:

4.00

Description:

Individual program of reading, research, writing on an approved topic under the supervision of a member of the CUES Honors Advisory Committee, for CUES majors who are candidates for honors in a CUES major and who
wish to prepare a thesis for submission to the honors committee. Must normally be taken in the senior year.
Environmental Science

The Center for Urban Ecology & Sustainability (CUES) offers a major in Environmental Science which allows students to develop a broad background in biology, chemistry, and physics with complementary emphasis on the science of environment and environmental ethics, policy, and regulation.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Environmental Science Courses

ENVS-111 Majors' Environmental Science

Prerequisites:

Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS L111

Credits:

3.00

Description:

Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health. This course is open to all environmental science and environmental studies majors and minors. Other students will be admitted by permission of the instructor. Must be taken concurrently with ENVS L111. 3 hours lecture. 1 term. 3 credits. Normally offered fall evenings.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR
ENVS-L111 Majors' Environmental Science Lab

Prerequisites:
Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with ENVS 111

Credits:
1.00

Description:
Laboratory exercises are used to illustrate topics covered in ENVS 111. Field testing and analysis of environmental samples. Field trips are required. This course is required for all environmental science and environmental studies majors and minors. Concurrent enrollment in ENVS 111 is required. 3 hour laboratory. Normally offered fall.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

ENVS-112 Majors' Environmental Science II

Credits:
3.00

Description:
Topics introduced in ENVS 111 are further developed to focus on how environmental conditions affect human, animal and ecological health. Areas may include control of environmental contaminants; public health and infectious disease control; antibiotic resistance; health issues associated with food production; contained animal feeding operations; the effects of industrialization on the environment; and the impact of disasters on environmental health. This course is open to environmental science and studies majors and minors or by permission from the instructor. 3 credits. Normally offered spring evenings. Must be taken concurrently with ENVS L112

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

ENVS-L112 Majors' Environmental Science II Lab

Credits:
Laboratory exercises are used to illustrate topics covered ENVS 112. Exercises may include analysis of environmental samples for heavy metal contamination and evidence of sewage contamination or air samples for criteria pollutants. Field trips are required. This course is required for Environmental studies majors and minors. 1 credit Normally offered in spring semester evenings. Prerequisite: enrollment in ENVS 112

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **ENVS-436 Environmental Science Practicum**

  Prerequisites:
  
  This class fulfills the Expanded Classroom Requirement

  Credits:
  
  4.00

  Description:
  
  Application of the principles and techniques of environmental science to a specific environmental problem through a practicum placement of at least 10 hours per week for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency. ECR 1 term- 4 credits.
  
  Normally offered fall and spring. Prerequisite: junior standing; limited to Environmental Science majors and minors.

  Term:
  
  Offered Both Fall and Spring

  Type:
  
  Expanded Classroom Requirement

- **ENVS-510 Independent Study**

  Prerequisites:
  
  An independent study form must be submitted to the CAS Dean's Office.

  Credits:
  
  1.00- 4.00
Description:

This is an independent study in environmental studies. Topics will vary.

Term:

Offered Both Fall and Spring
2016-2017 Archived Catalog Information

Environmental Studies

The Environmental Studies major in the Center for Urban Ecology & Sustainability (CUES) is an interdisciplinary major drawing from the sciences, humanities, and social sciences. The major is structured to provide students with a foundation in science, social science, ethics, and humanities so that they may develop a comprehensive understanding of the complexity of environmental issues.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Major Requirements**
- **Honors**
- **Minor Requirements**
- **Environmental Studies Courses**

Major Requirements: 13 courses and corresponding laboratories where applicable, 49 credits

CUES Shared Core Requirements (6 courses and corresponding laboratories where applicable, 21 credits)

- **UES-101 Environmental Studies**

  Credits:

  4.00

  Description:

  Focuses on the natural environment through the lens of social science and humanities. Students will study texts from those disciplines to acquire a deeper understanding of the values and beliefs that underlie environmental issues. Students will investigate the policy-making processes and institutions through which those issues are decided, and the social inequalities in the distribution of environmental problems. Texts to be studied will range from literature, philosophy, and film to policy statements, impact reports, community advocacy materials, and investigative journalism.

  Term:

  Offered Fall Term
UES-111 Majors' Environmental Science

Prerequisites:
Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with UES-L111

Credits:
3.00

Description:
Applies the fundamentals of science to environmental issues. Topics include population dynamics and resources, environmental degradation, ecosystems, geologic processes, deforestation, biodiversity, climate change, air, soil, and water resource management, and pollution and risks to health.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

UES-L111 Majors' Environmental Science Lab

Prerequisites:
Open to Environmental Science and Environmental Studies majors, or by permission of instructor. Must be taken concurrently with UES-111

Credits:
1.00

Description:
Laboratory exercises are used to illustrate topics covered in UES 111. Field testing and analysis of environmental samples. Field trips may be required.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

UES-225 Geographical Information Science

Prerequisites:
CMPSC-F131.

Credits:
3.00

Description:
Provides the fundamentals of geographic information science (GIS) including the history of automated mapping. A review of the necessary hardware and software elements used in GIS is presented. Hands-on exercises with computerized mapping software are required.

Type:
SCI TECH ENGNR

- UES-L225 Geographic Information Science Lab

Prerequisites:
CMPSC-F131. Must be taken concurrently with UES-225

Credits:
1.00

Description:
Required companion computer laboratory to be taken concurrently with UES 225.

Type:
SCI TECH ENGNR

- UES-401 Environmental Studies Capstone Course

Credits:
4.00

Description:
Examines a contemporary environmental issue for the development of senior project. Students will develop a proposal to address an identified issue from the multiple perspectives (e.g., policy, ethics, environmental justice, science and culture). As appropriate, the proposal will be field tested, demonstrated, or presented to the local community.

- UES-511 Professional Development Module

Prerequisites:
Environmental Studies or Environmental Science major or minor with junior standing
Choose one of the following courses:

- **STATS-250 Applied Statistics**

  **Prerequisites:**
  
  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

  **Credits:**
  
  4.00

  **Description:**
  
  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

  **Type:**
  
  Quantitative Reasoning

- **BIO-273 Biostatistics**

  **Prerequisites:**
  
  BIO 111/L111

  **Credits:**
  
  4.00

  **Description:**
  
  Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

  **Term:**
Offered Fall Term

Type:

Quantitative Reasoning

Environmental Studies Core Requirements (4 courses and corresponding laboratories where applicable, 16 credits)

- **PHIL-362 Environmental Ethics**

  Prerequisites:

  PHIL-119, PHIL-123, PHIL-127 or PHIL-120

  Credits:

  4.00

  Description:

  An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

  Term:

  Occasional

- **UES-211 Majors' Environmental Science II**

  Prerequisites:

  Environmental Studies and Environmental Science majors only. Must be take concurrently with UES-L211

  Credits:

  3.00

  Description:

  Focuses on how environmental conditions affect human, animal and ecological health. Areas may include control of environmental contaminants; public health and infectious disease control; sanitation systems; antibiotic resistance; health issues associated with food production; the effects of industrialization on the environment; and the impact of disasters on environmental health.

  Term:

  Offered Fall Term

  Type:
- **UES-L211 Majors' Environmental Science II Lab**

  **Prerequisites:**
  Environmental Science and Environmental Studies majors only. Must be taken concurrently with UES-211

  **Credits:**
  1.00

  **Description:**
  Illustrates topics covered UES 211 through laboratory exercises. Exercises may include analysis of environmental samples (soil, water, and air). Field trips may be required.

  **Term:**
  Offered Fall Term

  **Type:**
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **UES-301 Issues in Environmental Justice**

  **Credits:**
  4.00

  **Description:**
  Investigates the environmental justice movement, its basis in law, and its leaders. Students will study key topics pertaining to environmental and health disparities and learn about community organizing and advocacy and their application to shape decision-making. Sustainable practices and their integration into daily life to create healthy communities and equity will be considered.

- **UES-330 Research Methods**

  **Prerequisites:**
  UES-111 UES-L111 UES-211 UES-L211

  **Credits:**
  4.00

  **Description:**
  How environmental professionals decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most
frequently used by environmental professionals and undertake their own small research project. Required for all environmental studies majors.

Term:
Offered Fall Term

Concentration Requirement (3 courses, 12 credits)
Choose one of the following concentrations.

Environmental Policy Concentration

- **GVT-438 Environmental Policy & Politic**

  Prerequisites:
  
  This course will have a service learning component Junior Status required

  Credits:
  4.00

  Description:

  From Rio to the Boston Harbor Project, this course examines the policies and politics of the environment. It examines the origins of the environmental movement in the United States focusing on the development and present function of government and non-government organizations responsible for the development and implementation of global, national, state and local environmental policies.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

Choose two of the following. At least one must be at or above the 300-level:

- **EC-131 Environmental Economics**

  Credits:
  4.00

  Description:

  Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

  Type:

  Social Science, BSJ SOCIAL SCIENCE
EC-151 Economic & Human Geography

Credits:
4.00

Description:
The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:
Cultural Diversity Opt B,Social Science,BSJ SOCIAL SCIENCE,Asian Studies,Diverse Perspectives

GVT-223 American Politics & Institutions

Prerequisites:
GVT 110 or GVT 120 or instructor's permission

Credits:
4.00

Description:
This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:
Social Science,BSJ SOCIAL SCIENCE

GVT-224 Introduction to Public Policy

Prerequisites:
GVT 110 and GVT 120 or instructor's permission

Credits:
4.00
An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:
Social Science, BSJ SOCIAL SCIENCE

- P.AD-362 Global Health, Poverty & Warming

Prerequisites:
SIB 101 or HST 149 or HST 150 or Instructor permission

Credits:
3.00

Description:
Global health, global poverty, and global warming are three interrelated issues that are creating a perfect storm of crises worldwide with major impacts on the United States. This course is an overview of the problems - the needs, systems, programs, and financing. We will look critically at policies in these areas and discuss what needs to be done to address them. Students will write a major paper on an issue of their choice.

Type:
Global Engagement Experience

Urban Environmentalism Concentration

Choose three of the following. At least two must be at or above the 300-level:

- BIO-109 Plants and People

Prerequisites:
Non Science Majors Only.

Credits:
4.00

Description:
This course focuses on the ancient, intimate, and mutually beneficial relationship between humans and plants. We will discuss the basic anatomy, physiology, and genetic characteristics of flowering plants and how these characteristics have facilitated their use by humans. We will explore the impacts of a wide range of plants and their products on human society while considering the evolutionary changes that these plants have undergone through artificial selection. We will also touch on the synergistic role of fungus and plants in alcohol fermentation.
This course fulfills the non-lab natural sciences requirement for BFA, BSJ, and BA degrees. Non-biology majors only.

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR

• EC-151 Economic & Human Geography

Credits:
4.00

Description:
The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Type:
Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Asian Studies, Diverse Perspectives

• ENT-352 Green and Sustainable Business

Prerequisites:
ENT-101 and Junior Standing

Credits:
3.00

Description:
Over the past decade, the world of business and the environment has exploded. Beginning as an engineering-driven movement among a handful of companies during the 1980's, many firms have learned that improved environment performance can save money and create a competitive advantage. In this course, we will cover how businesses of all sizes are more attentive to environmental issues and the realization that a green business: improves employee morale and health in the workplace, holds a marketing edge over the competition, strengthens the bottom line through operating efficiencies, is recognized as an environmental leader, can have a strong impact in the community and beyond, and can improve public relations.

Term:
Offered Spring Term

• UES-310 The Civilian Conservation Corps and the American Landscape
Prerequisites:

Class will meet for 75 minutes a week and then travel over spring break. Instructor's consent is required

Credits:

4.00

Description:

Focuses on the history and lasting effect of the Civilian Conservation Corps (CCC) on the physical and political landscape of the United States. Tracks the progression of work of the more than 3 million men who served in the CCC from 1933 to 1942, from the planting of billions of trees to the development of recreational opportunities on federal and state lands. Looks at the role the CCC played in redefining conservation and creating a mainstream environmental movement. Investigates the lasting legacy that the CCC left on the American landscape through the development of other conservation corps programs. Connected with a required Alternative Spring Break trip, this experiential education offering will allow students to experience and complete similar work to that completed by CCC members.

Term:

Offered Spring Term

Type:

Expanded Classroom Requirement, Local Engagement Experience

- **UES-325 Environmental History of US**

  Credits:

  4.00

  Description:

  Explores how Americans have understood the environment and their relationship to it through analysis of classic environmental texts, historical contexts, and societal perspectives. Analyzes how the environment has changed from pre-colonial times to the present and how these changes have been described through the lens of environmental history. Themes include differing viewpoints of European and indigenous peoples toward the natural environment, the impacts of the Western expansion on native species and landscapes, the rise of industrialism and its impacts on natural resources and ecosystems, and the rise of 20th century environmentalism. This course fulfills the HIS core requirement.

  Term:

  Offered Fall Term

Internship Option

Internships may be approved for credit by the CUES director. An approved internship for 3- or 4- credits may be used as a concentration course option at the discretion of the CUES director.

- **UES-503 Local Internship**
Prerequisites:

Environmental Science and Environmental Studies majors and minors only with junior standing.

Credits:

1.00-4.00

Description:

Application of the principles and techniques of environmental science or studies to a specific environmental problem through a local internship placement of 10 hours per week (minimum) for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency or NGO.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

- UES-505 Global Internship

Credits:

1.00-4.00

Description:

Application of the principles and techniques of environmental science or studies to a specific environmental problem through a global internship placement of 10 hours per week (minimum) for 12 weeks. Typically, this experience will include literature research, classroom meetings, and field work in an off-campus environmental agency or NGO.

Term:

Offered Both Fall and Spring

Note: Certain courses required of the major will also meet core curriculum requirements and can be double-counted. Electives not currently listed may be accepted at the discretion of the CUES director.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

- Major Requirements
- Honors
- Minor Requirements
- Environmental Studies Courses

The Center for Urban Ecology and Sustainability offers an honors program. Students participating in the program must meet the following criteria:

1. Students must have an overall GPA of 3.5 or higher and a GPA in the major of 3.5 or higher.
2. Honors candidates must be invited by the CUES Honors Advisory Committee and should register for at least four credits of UES-555 Honors Thesis.
3. Participants will develop and complete an independent study project under the supervision of a member of the CUES Honors Advisory Committee. Depending on the nature of the project, the study may be conducted on or off campus, or involve a combination of both.
4. To successfully complete the project, a student will be required to develop and defend a thesis to the CUES Honors Advisory Committee and to present findings in a colloquium.

- UES-555 Senior Thesis

Prerequisites:

Grade point average 3.0 overall, 3.4 in major; completion of a minimum of 8 credits in courses that are part of the Environmental Studies major at Suffolk University; consent of instructor.

Credits:

4.00

Description:
Individual program of reading, research, writing on an approved topic under the supervision of a member of the CUES Honors Advisory Committee, for CUES majors who are candidates for honors in a CUES major and who wish to prepare a thesis for submission to the honors committee. Must normally be taken in the senior year.

- Honors
- Minor Requirements
- Environmental Studies Courses

- ENST-101 Environmental Studies
  
  Credits:

  4.00

  Description:

  An interdisciplinary course that focuses on the social science and humanities disciplines as they are related to the natural environment. Students will study texts from those disciplines to acquire a deeper understanding of the values and beliefs that underlie environmental issues. The course will also investigate the policy-making processes and institutions through which those issues are decided, and the social inequalities in the distribution of environmental problems. Texts to be studied will range from literature, philosophy and film to policy statements, impact reports, community advocacy materials, and investigative journalism.

- ENST-301 Issues in Environmental Justice
  
  Credits:

  4.00

  Description:

  Environmental justice is the fair treatment and meaningful involvement of all people regardless of race or income regarding the development, implementation, and enforcement of environmental laws, regulations, and policies. In
this course, students will learn about the background of environmental justice, its basis in law, leaders in the
movement, and key topics pertaining to environmental and health disparities, such as air quality, public
transportation, access to healthy food, facility siting and clean-up, land use, and climate. Material will draw heavily
upon local examples and readings from a wide range of fields. Students will learn about community organizing
and advocacy, and how these skills can be applied to shape decision-making. We will also discuss sustainable
practices that can be integrated into daily life to create healthy communities and equity. One term, 4 semester
hours, normally offered once a year, no prerequisites.

• ENST-310 The Civilian Conservation Corps and the American Landscape

Prerequisites:
Class will meet for 75 minutes a week and then travel over spring break. Instructor's consent is required

Credits:
4.00

Description:
This course will focus on the history and lasting affect of the Civilian Conservation Corps (CCC) on the physical
and political landscape of the United States. From 1933 to 1942 more than 3 million men served in the CCC, and
this course will track the progression of their work from the planting of billions of trees to the development of
recreational opportunities on federal and state lands. Over time, CCC work progressed from the conservation of
natural resources to the conservation of human resources and promotion of recreation on public lands. As the
CCC changed over time, so too did public opinion concerning the CCC's work and mission. This class will explore
opposition to CCC projects by significant figures in America's environmental movement such as Aldo Leopold and
Bob Marshall, and the resulting influence on the environmental movement in America. We will also look at the role
the CCC played in redefining conservation and creating a mainstream environmental movement. In addition, this
class will consider the affect that the CCC had on New Deal politics. Finally, this class will study the lasting legacy
that the CCC left on the American landscape through the development of other conservation corps programs.
Students will also read first hand accounts, view films, and possibly hear directly from a CCC veteran. As a class
connected with an Alternative Spring Break trip, this experiential education offering will allow students to
experience and complete similar work to that completed by CCC members. During Alternative Spring Break,
students will visit important CCC history sites such as the first CCC camp in the country and a major national park
development project. During the course, assignments will challenge students to identify CCC sites in
Massachusetts or their home states. Local site visits are a possibility for this class. Other assignments will
challenge students to identify modern environmental organizations who can trace their origins to the

Type:
Expanded Classroom Requirement, Local Engagement Experience

• ENST-315 Foundations of Environmental Education

Credits:
4.00

Description:
This course will provide an overview of Environmental Education (EE) by looking at how EE has been defined,
how the field has changed over time, and how our own connections with the environment can inform our
understanding and practice of this work. Students will consider the goals of EE and the variety of approaches utilized in the field to reach those goals. Age appropriate environmental education, place-based education, and urban environmental education will also be studied.

- **ENST-321 Introduction to Permaculture**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Permaculture is the design of food systems and social structures to provide for human needs while restoring ecosystem health. Examining the interconnections between environmental, social and economic components, Permaculture is informed by the disciplines of systems ecology, ecological design and ethno-ecology.

- **ENST-401 Environmental Studies Capstone Course**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A course examining a contemporary environmental issue from various disciplinary perspectives. Using a case-study approach, students will develop a proposal to address the identified issue from the perspectives of policy, ethics, justice, science and culture. As appropriate, the proposal will be field tested, demonstrated, or presented to the local community. Possible topics include sustainable development, urban air pollution, sustainable farming, or water conservation.

- **ENST-402 Environmental Studies Capstone II**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A continuation of ENST 401

- **ENST-403 Environmental Studies Practicum**
  
  **Prerequisites:**
  
  This class fulfills the Expanded Classroom Requirement. Junior standing or above required or consent of the instructor.
  
  **Credits:**
  
  4.00
This course combines a practicum placement of at least 10 hours a week for 12 weeks in a position that offered the student significant opportunity to learn about environmental problems as the basis for reflection, analysis, and skill development through appropriate reading, writing, and oral presentation assignments. Specific learning objectives will be tailored to the student's placement. Interested students should consult instructor in advance. ECR. 4 credits. Prerequisite: junior standing, limited to Environmental Studies majors and minors.

Description:

ENST-420 German Greens and Environmentalism

Credits:

4.00

Description:

The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g., alternative energy sources, organic farming, recycling, dismantling of nuclear power). Cross-listed GER 420 and GVT 420

ENST-450 Lobbying, Media, and Public Policy

Credits:

4.00

Description:

As a result of new environmental and energy concerns championed by the media, politicians and the public government regulators in the US and around the world are being forced to rethink their priorities and react to these outside influences rather than rely on the process they have used for decades. But as we shift to notions such as the precautionary principle and embrace renewable power as a solution to climate change, is this reactionary approach relying too much on what the media and others say and too little on the facts? Are government agencies equipped to analyze these issues and disagree with rising public opinion? Is this a good way to develop public policy? Through discussion and analysis, we will critically examine all sides of these and other current issues and get behind the headlines using real world examples to try to separate fact from hype. We'll also probe the roles that politicians, lobbyists, and the media have in framing the debate.

Type:

Social Science

ENST-555 Senior Thesis

Prerequisites:
Credits:

4.00

Description:

Individual program of reading, research, writing on an approved topic under the supervision of a member of the Committee on Environmental Studies, for Environmental Studies majors who are candidates for honors in Environmental Studies and who wish to prepare a thesis for submission to the honors committee. Must normally be taken in the first semester of the senior year. Prerequisites: Grade point average 3.0 overall, 3.4 in major; completion of a minimum of 8 credits in courses that are part of the Environmental Studies major at Suffolk University; consent of instructor. 1 term - 4 credits. Normally offered every fall.
2016-2017 Archived Catalog Information

Fine Arts

The Fine Arts program offers a broad investigation of the possibilities open to the developing artist and trains students to become active participants in the contemporary arts community.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Major Requirements**
- **Fine Arts Minor Requirements**
- **Fine Arts Courses**

Major Requirements: 28 courses, 88 credits

Courses in the Fine Arts program have as a prerequisite the completion of the Foundation Studies program or its equivalent. Exceptions may only be made with permission of the instructor and the Fine Arts program director.

The letter "S" preceding a course number indicates a studio course. A studio fee is assessed for all studio courses.

For specific sequence of courses, contact your advisor or the department.

Required Courses (26 courses, 82 credits)

- **ADF-S101 Foundation Drawing I**

  Credits: 3.00

  Description:

  This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

  Term:

  Offered Both Fall and Spring

  Type:
• ADF-S102 Foundation Drawing II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

Term:

Offered Both Fall and Spring

• ADF-S152 3-Dimensional Design

Prerequisites:

ADF S151 or ADF S166

Credits:

3.00

Description:

This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

Term:

Offered Both Fall and Spring

• ADF-S166 2D/Color

Credits:

3.00
This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists’ decisions, affecting the look, meaning and use of visual phenomena.

Type:
Arts Admin Minor Elective

• ADF-S171 CI: Integrated Studio 1

Credits:
3.00

Description:
This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

Type:
Creativity and Innovation, Arts Admin Minor Elective

• ADF-S172 CI: Integrated Studio II

Prerequisites:
ADF S101

Credits:
3.00

Description:
This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media-including video/sound capture and editing-as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type: 
Creativity and Innovation
• ADFA-S201 Drawing: Language of Light

  Prerequisites:
  ADF S102

  Credits:
  3.00

  Description:
  This course is an extensive exploration of the human form and how it is represented in drawing. Refining their drawing skills, students use a variety of dry media (graphite, charcoal, pastel, collage) to articulate figure/plane

  Term:
  Offered Fall Term

• ADFA-S204 Sculptural Thinking

  Prerequisites:
  Take ADF-S152

  Credits:
  3.00

  Description:
  Art is not just visual. Artists also think with their hands" understanding that engagement with the physical world is vital to the creative process, and often gives rise to unexpected and fruitful ideas. In this course, students will explore traditional and experimental sculptural processes in a spirit of directed play", focusing on both intuitive and critical responses to materials.

• ADFA-S220 Drawing: Shifting Scales

  Prerequisites:
  ADF-S102 or ADF-S502; ADF-S151 or ADF-S551;

  Credits:
  3.00

  Description:
  We live in a world of great contrasts in scale, where hand held screens can download Google earth and nanotechnologies can change the lives on entire continents. How do these shifts in scale alter our perceptions of space, and therefore change the way we understand and make drawings? This figure-based course uses descriptive observation as the starting point for addressing visual invention. Students will work from a model, using traditional figurative techniques to combine and contrast with digital imaging techniques, graphic novels,
and various contemporary drawing approaches. A variety of wet and dry drawing media will be used with more experimental materials.

Term:
Offered Spring Term

• ADFA-S241 Advanced Painting

Prerequisites:
ADF S123.

Credits:
3.00

Description:
This course will involve the concepts and techniques of 20th and 21st century painting. Students develop an individual approach to non-objective and objective painted space. Open-ended assignments, lectures, critiques and discussions will clarify the work students produce. Substantial independent studio time allows students to focus on work that responds to contemporary issues in painting.

Term:
Offered Spring Term

• ADFA-S242 Sculpture Studio

Prerequisites:
ADF S152

Credits:
3.00

Description:
A focused study on the language of dimensionality in sculpture, students will explore traditional and non-traditional materials. Issues of craft, concept and context will aid students in developing work that responds to currents in contemporary sculpture. This class will also provide students with a substantial grounding in 20th and 21st century sculptural theory and practice.

Term:
Offered Spring Term

• ADFA-S251 Printmaking Studio

Credits:
3.00

Description:

This course is designed to familiarize students with the printmaking studio and various techniques. Students will gain exposure to a number of techniques including non-toxic processes. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

Term:

Offered Fall Term

- **ADFA-S271 Fine Arts Seminar I**

  Prerequisites:
  ADF S102 ADF S123, and ADF S152

  Credits:
  3.00

  Description:

  Fine Arts Seminar is designed as a vehicle for students to develop a personal relationship to contemporary art theory and practice. Questions are posed as a point of departure for the students to generate work. Visiting artists and weekly gallery and museum visits aid in examining aspects of current art making in order to assist students in creating a strong vision for their work. Restricted to Fine Arts Majors only.

  Term:

  Offered Fall Term

- **ADFA-S272 Fine Arts Seminar I**

  Prerequisites:
  ADFA S271

  Credits:
  3.00

  Description:

  A continuation of the first semester, this course aids students in recognizing the patterns and questions posed in their own studio practices. A large number of technical approaches to content will be explored.

  Term:

  Offered Spring Term
• ADFA-S311 Contemporary Trends & Practices

Prerequisites:

Intended for Majors only

Credits:

3.00

Description:

Contemporary Trends & Practices moves art theory into the studio and the studio out into the world. Students will look at the most significant artists and movements of the past 50 years while examining their social, cultural and political context. Canonized contemporary art categories (postmodernism, appropriation, anti-art and performance art are some examples) are assigned as group projects. Movements, strategy or style of art making is discussed as an expressive problem solving experience, blurring the lines between media. This course conflates contemporary art history with contemporary art practices.

Term:

Offered Fall Term

• ADFA-S344 Advanced Drawing Issues

Prerequisites:

Take ADFA-S272;

Credits:

3.00

Description:

This course has students assess their work of the past several years in order to determine current and future goals. Students use the tools they find in the relationship between 2D and 3D in order to define contemporary drawing for themselves.

Term:

Offered Fall Term

• ADFA-S361 Figure Studio: 2D

Prerequisites:

ADFS123 AND ADFA S241

Credits:

3.00
This painting course is designed to provide an in-depth study and practice of two-dimensional contemporary figuration. Basing all students on the Masters and movements of the past, this course focuses on the methodology and effects of four major figurative painters from late-twentieth century through the present.

Term:
Offered Fall Term

- **ADFA-S362 Figure Studio: 3D**

  Prerequisites:
  Take ADF-S152 ADFA-S361;

  Credits:
  3.00

  Description:
  This sculpture course considers the figure in its importance both as a historical element and as a reflection and definition of self. Established an understanding of the figurative form in the space by relating gesture and structure through manipulated form. Weight, mass, plane and volume are considered while working directly from the model.

  Term:
  Offered Spring Term

- **ADFA-S371 Fine Arts Seminar II**

  Prerequisites:
  ADFA S271 and ADFA S272

  Credits:
  3.00

  Description:
  In this third semester of the Seminar sequence, students are responsible for integrating their visual culture influences and references within an expanded body of work.

  Term:
  Offered Fall Term

- **ADFA-S372 Fine Arts Seminar II**

  Prerequisites:
ADFA S271 and ADFA S272 and ADFA S371

Credits:
3.00

Description:
During this final Seminar semester, the focused studio practices of students are channeled into the development of their final thesis exhibition. The four-semester Fine Arts Seminar sequence.

Term:
Offered Spring Term

• ADFA-400 Fine Arts Internship

Prerequisites:
Restricted to Juniors and Seniors

Credits:
3.00- 6.00

Description:
Fine Arts majors are required to complete an internship where they will apply their studio and academic skills in a professional setting. Internships enable students to enrich their perspective of the field by sampling the career paths available to them in the art and culture economy. Student interns work directly with established professional artists or with arts and cultural organizations such as museums, galleries, and arts councils. This experiential learning is critical for career preparation and is intended to foster personal growth, hone professional skills, and provide networking opportunities. The internship experience is paired with a faculty-led seminar that will reinforce new skills and provide a venue for inquiry, sharing, and reflection.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

• ADFA-S410 Senior Thesis

Prerequisites:
Fine Arts Senior status required.

Credits:
3.00
Description:

This senior-level course readies the student for the furtherance of his or her career as a creative artist. Though the development of a written artist's statement, slide and electronic documentation and the charting of their individual artistic lineage, students will begin to place themselves within the context of the contemporary art world. Normally offered Spring semester.

Term:

Offered Spring Term

• ARH-101 Art History I

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

• ARH-102 Art History II

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst
Select two Art History elective courses.

Electives (2 courses, 6 credits)

Choose two studio courses.

Note: Studio electives are subject to approval of the Fine Arts program director.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

- ADF-S123 Painting
  
  Prerequisites:
  
  ADF S101, ADF S166
  
  Credits:
  
  3.00

  Description:

  In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint.
Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Term:
Offered Spring Term

Note:
Students may not double count ADF-S123. Students should choose this course if they want to take the Fine Arts studio courses that have ADF-S123 as a prerequisite.

- Fine Arts Courses

- ADFA-304 Art and Architecture of the Italian Renaissance

  Prerequisites:

  ADF-182 and the Fine Art Program Director's consent.

  Credits:

  4.00

  Description:

  This course introduces the students to Italian Renaissance art, artists and culture from the first evidence in the Italian Gothic (around the 1260's) to the Early and High Renaissance, predominantly in Florence and Venice, up to the 1600's. The course will survey the history of painting, sculpture and architecture as we study the works individually, for their formal elements and visual importance, but also within their aesthetic, historic, political and cultural context. Class discussion and a visual analysis of works of art will encourage personal interpretation and critical thinking. A list of terms related to the Renaissances introduces the language of art. Normally offered during the summer. Offered in Italy only.

  Type:

  Expanded Classroom Requirement

- ADFA-306 Art & Culture of Asia, Africa, South America and Oceania

  Credits:

  4.00
Description:

The coursework introduces students to the artistic and visual traditions from South and East Asia, Africa, Oceania and the Americas. In addition to the material culture of the particular region under study, the coursework will consider socio-political ideals, religious belief systems, and cultural principles that ‘shaped’ or informed the work and the ideology of civilizations beyond the Western hemisphere. Comparative analysis among non-western and western traditions will be used to critically analyze the salient points of influence, rejection and modifications of aesthetic affinities. Class lectures will be supplemented with museum seminars specifically the rich non-western collections at the MFA, Boston. Guided field trips to the museum will allow students to formally analyze the works of art discussed in lecture and text material.

Term:

Occasional

Type:

Cultural Diversity Opt B, Cultural Diversity BFA, Asian Studies, Humanities & History, Expanded Classroom

• ADFA-344 Islamic Spain: Art and Architecture

Credits:

4.00

Description:

This course examines the Islamic influence in Spain through its art and architecture from its formative period in the eighth century through the fourteenth century and beyond to see the continuity and change of the Mozarabic style found locally in Madrid, Cordoba, Seville, and Granada. Students will use formal analytical skills to critically explore works of art and architecture and will cultivate a 'lens' through which they will facilitate their understanding of the classic and contemporary material culture and fabric of Spain. Class meetings will be supplemented with field trips. Offered as needed.

Type:

Humanities Literature Requirement, Humanities & History

• ADFA-345 Art of India

Credits:

4.00

Description:

A chronological survey of South Asian art (2300 BCE - 1750 CE) including India, Pakistan, Bangladesh, and Nepal. Examination of art and architecture from their first and still mysterious beginnings in the Indus Valley, through the great masterpieces of Buddhist and Hindu art to the coming of Islam, including the eclectic culture of the Mughal courts and the golden age of miniature paintings. Consideration is given to the multiple aspects of patronage in Indian culture - religious, political, economic - through case studies of individual works of art and architecture. (Formerly HUM 345)
- ADFA-346 Art of the Silk Road

Credits:
4.00

Description:
This course will examine the arts and architecture of the Silk Road, with particular attention to art of Buddhism, Hinduism, and Islam. Historically, Inner Asia was marked by trade routes (the 'Silk Route' or 'Silk Road') which crisscrossed this vast landscape of deserts and mountains between China, India, the Iranian Plateau and the Mediterranean world. In addition to the art of these cultures, we will also look at the records of early Chinese travelers through Central Asia. (Formerly HUM 346) Offered as needed.

- ADFA-400 Fine Arts Internship

Prerequisites:
Restricted to Juniors and Seniors

Credits:
3.00- 6.00

Description:
Fine Arts majors are required to complete an internship where they will apply their studio and academic skills in a professional setting. Internships enable students to enrich their perspective of the field by sampling the career paths available to them in the art and culture economy. Student interns work directly with established professional artists or with arts and cultural organizations such as museums, galleries, and arts councils. This experiential learning is critical for career preparation and is intended to foster personal growth, hone professional skills, and provide networking opportunities. The internship experience is paired with a faculty-led seminar that will reinforce new skills and provide a venue for inquiry, sharing, and reflection.

• ADFA-S212 Figure Painting: Issues in Contemporary Realism

    Prerequisites:
    Fine Art Program Director Approval needed

    Credits:
    3.00

    Description:
    This course functions as a lab for students to improve their painting skills. Working directly from the models, beginning and more advanced students will explore technique at their own level. Tri-weekly poses will allow in-depth investigation and complex images to develop. Students can work with the painting medium of their choice. Historical and contemporary painters will be used to further the students progress. Open to majors and non-majors.

    Term:
• ADFA-S220 Drawing: Shifting Scales

Prerequisites:

ADF-S102 or ADF-S502; ADF-S151 or ADF-S551;

Credits:

3.00

Description:

We live in a world of great contrasts in scale, where hand held screens can download Google earth and nanotechnologies can change the lives on entire continents. How do these shifts in scale alter our perceptions of space, and therefore change the way we understand and make drawings? This figure-based course uses descriptive observation as the starting point for addressing visual invention. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

  Term:

  Offered Fall Term

• **ADFA-S271 Fine Arts Seminar I**

  Prerequisites:

  ADF S102 ADF S123, and ADF S152

  Credits:

  3.00

  Description:

  Fine Arts Seminar is designed as a vehicle for students to develop a personal relationship to contemporary art theory and practice. Questions are posed as a point of departure for the students to generate work. Visiting artists and weekly gallery and museum visits aid in examining aspects of current art making in order to assist students in creating a strong vision for their work. Restricted to Fine Arts Majors only.

  Term:

  Offered Fall Term
• ADFA-S272 Fine Arts Seminar I

Prerequisites:

ADFA S271

Credits:

3.00

Description:

A continuation of the first semester, this course aids students in recognizing the patterns and questions posed in their own studio practices. A large number of technical approaches to content will be explored.

Term:

Offered Spring Term

• ADFA-S311 Contemporary Trends & Practices

Prerequisites:

Intended for Majors only

Credits:

3.00

Description:

Contemporary Trends & Practices moves art theory into the studio and the studio out into the world. Students will look at the most significant artists and movements of the past 50 years while examining their social, cultural and political context. Canonized contemporary art categories (postmodernism, appropriation, anti-art and performance art are some examples) are assigned as group projects. Movements, strategy or style of art making is discussed as an expressive problem solving experience, blurring the lines between media. This course conflates contemporary art history with contemporary art practices.

Term:

Offered Fall Term

• ADFA-S342 Advanced Sculpture

Prerequisites:

ADFA S242

Credits:

3.00

Description:
In this course, students will explore contemporary sculptural issues, using a variety of found and generated materials. The process of installation, wall, floor, self-supported pieces and environmental works will be investigated.

Term:
Offered Spring Term

- **ADFA-S344 Advanced Drawing Issues**

  Prerequisites:
  Take ADFA-S272;

  Credits:
  3.00

  Description:
  This course has students assess their work of the past several years in order to determine current and future goals. Students use the tools they find in the relationship between 2D and 3D in order to define contemporary drawing for themselves.

  Term:
  Offered Fall Term

- **ADFA-S345 Advanced Printmaking**

  Prerequisites:
  ADFA S251 or instructor permission

  Credits:
  3.00

  Description:
  In Advanced Printmaking students will explore issues of technique, scale and multiple press runs that are not feasible within the context of the beginning Printmaking course. In this advanced course students will focus on a chosen area of traditional or contemporary print media, ranging from etching, digital imaging, lithography, paper molding, and photocopying, to relief and screen printing. Through the use of theory and developed skill, the course will allow students to create print-based works of an increasingly professional standard in both two and three dimensions. Students will undertake projects both as separate entities and as combined installed pieces, aimed at encouraging an individual, creative and professional approach to printmaking in the context of contemporary art practice.

  Term:
  Occasional
• ADFA-S361 Figure Studio: 2D

Prerequisites:

ADF S123 AND ADFA S241

Credits:

3.00

Description:

This painting course is designed to provide an in-depth study and practice of two-dimensional contemporary figuration. Basing all students on the Masters and movements of the past, this course focuses on the methodology and effects of four major figurative painters from late-twentieth century through the present.

Term:

Offered Fall Term

• ADFA-S362 Figure Studio: 3D

Prerequisites:

Take ADF-S152 ADFA-S361;

Credits:

3.00

Description:

This sculpture course considers the figure in its importance both as a historical element and as a reflection and definition of self. Established an understanding of the figurative form in the space by relating gesture and structure through manipulated form. Weight, mass, plane and volume are considered while working directly from the model.

Term:

Offered Spring Term

• ADFA-S365 Advanced Figure Studio

Credits:

3.00

Description:

This course is an extension of the Figure Studio 2D & 3D course. The focus will be on advanced figuration in relation to contemporary and historical works. Students will work in any media that pertains to their exploration of depiction and content. Students are expected to work in consultation with the professor in class and in their individual studios.
• **ADFA-S371 Fine Arts Seminar II**

  Prerequisites:
  ADFA S271 and ADFA S272

  Credits:
  3.00

  Description:
  In this third semester of the Seminar sequence, students are responsible for integrating their visual culture influences and references within an expanded body of work.

  Term:
  Offered Fall Term

• **ADFA-S372 Fine Arts Seminar II**

  Prerequisites:
  ADFA S271 and ADFA S272 and ADFA S371

  Credits:
  3.00

  Description:
  During this final Seminar semester, the focused studio practices of students are channeled into the development of their final thesis exhibition. The four-semester Fine Arts Seminar sequence.

  Term:
  Offered Spring Term

• **ADFA-S380 Advanced Seminar Projects**

  Prerequisites:
  Take ADFA-S272;

  Credits:
  3.00- 6.00

  Description:
  This course functions as a bridge between the undergraduate processes of Fine Arts Seminar and the postgraduate environment of the visual arts. Particular attention will be paid to the contexts used by students to define their work in relation to feedback of professional outside reviewers. Individual contracts between faculty
and student will be developed at the beginning of each semester. Contracts will assess the priorities for the work and adapt studio practices for the creation of new work. A research component will be attached when awarding 4-6 credits.

Term:
Occasional

• ADFA-S410 Senior Thesis

Prerequisites:
Fine Arts Senior status required.

Credits:
3.00

Description:
This senior-level course readies the student for the furtherance of his or her career as a creative artist. Though the development of a written artist’s statement, slide and electronic documentation and the charting of their individual artistic lineage, students will begin to place themselves within the context of the contemporary art world. Normally offered Spring semester.

Term:
Offered Spring Term

• ADFA-S500 Fine Arts Directed Studio

Prerequisites:
Fine Art Program Director Approval needed

Credits:
1.00- 6.00

Description:
The student completes a directed study project, either studio (ADFA S500) or non-studio (ADFA 500) under the supervision of a full time fine arts faculty member. Please see Directed Study elsewhere in this catalog for details. Independent study forms are available from the Office of the Academic Dean and Registrar. All independent study projects must be approved by the individual faculty member, the Fine Arts Program Director, and the NESADSU Chairman. Normally available every semester.

• ADFA-S510 Fine Arts Independent Study

Prerequisites:
Fine Art Program Director Approval needed
Credits:
1.00-6.00

Description:
The student completes a directed study project, either studio or non-studio under the supervision of a fine arts faculty member. Please see Directed Study elsewhere in this catalog for details. Independent study forms are available from the Office of the Academic Dean and Registrar. All independent study projects must be approved by the individual faculty member, the Fine Arts Program Director, and the NESADSU Chairman.
Forensic Science

Forensic Science is broadly defined as the application of science to the criminal and civil laws that are enforced by police agencies in a criminal justice system. The Forensic Science minor is constructed to give students a broad foundation in the sciences underpinning forensic science, which will complement any major. However, the Forensic Science minor when taken with a science major will prepare the student for work in a testing or crime laboratory, as well as provide the required courses for entrance into master's or doctoral programs in forensic science.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements
- Forensic Science Courses

Minor Requirements: 5 courses and corresponding laboratories where applicable, 20 credits

Core Requirements (2 courses and corresponding laboratories, 8 credits)

- FS-103 Introduction to Forensic Science

  Prerequisites:
  
  FS-L103

  Credits:
  
  3.00

  Description:
  
  Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

  Term:
  
  Offered Fall Term

  Type:
  
  SCI TECH ENGNR
- **FS-L103 Introduction to Forensic Science Lab**
  
  **Prerequisites:**
  
  FS 103 concurrently
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall Term:
  
  Offered Fall Term
  
  **Type:**
  
  SCI TECH ENGNR
  
- **CHEM-314 Instrumental Analysis**
  
  **Prerequisites:**
  
  CHEM 211; CHEM L314 must be taken concurrently.
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.
  
  **Term:**
  
  Offered Fall Term
  
- **CHEM-L314 Instrumental Analysis Laboratory**
  
  **Prerequisites:**
  
  CHEM L211; CHEM 314 must be taken concurrently
  
  **Credits:**
Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

Term:

Offered Fall Term

Please note that CHEM-314 has the following prerequisites:

- **CHEM-111 General Chemistry I**

  Prerequisites:

  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

  Credits:

  3.00

  Description:

  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

  Term:

  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry Laboratory I**

  Prerequisites:

  MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

  Credits:

  1.00

  Description:
Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

  **Prerequisites:**

  CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

  **Credits:**

  3.00

  **Description:**

  This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

  **Term:**

  Offered Both Fall and Spring

  **Type:**

  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry Laboratory II**

  **Prerequisites:**

  MATH-MPEL0 MATH-MPEL1 MATH-MPEL2 MATH-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently.

  **Credits:**

  1.00

  **Description:**
This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-211 Organic Chemistry I**

  Prerequisites:
  
  CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.

  Credits:
  
  3.00

  Description:
  
  Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.

  Term:
  
  Offered Both Fall and Spring

- **CHEM-L211 Organic Chemistry Laboratory I**

  Prerequisites:
  
  CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.

  Credits:
  
  1.00

  Description:
  
  Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

  Term:
  
  Offered Both Fall and Spring
Electives (3 courses and corresponding laboratories where applicable, 12 credits)

Choose three of the following:

- **BIO-111 Introduction to the Cell**
  
  **Prerequisites:**
  
  Must take BIO L111 concurrently
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**
  
  **Prerequisites:**
  
  Concurrently with BIO 111
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  SCI TECH ENGNR

- **BIO-274 Genetics**
An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

Term:
Offered Fall Term

• BIO-L274 Genetics Lab

Prerequisites:
BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

Credits:
1.00

Description:
Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include E. coli, B. subtilis, S. cerevisiae, D. melanogaster, S. fimicola, and C. elegans.

Term:
Offered Fall Term

• CHEM-453 Introduction to Toxicology

Prerequisites:
CHEM-331 or instructor's consent

Credits:
3.00

Description:
The study of toxic actions of chemicals on biological systems, with discussion of general principles, methodology, and target organ toxicity. Topics may include pesticides, neurotoxicants, toxicity of metals, and carcinogenesis/
mutagenesis. Examples will be drawn from forensic toxicology, as well as environmental and occupational toxicology.

Term:

Offered Every Other Year

- **PHIL-363 Bio and Medical Ethics**

  Prerequisites:

  Prerequisite: Phil 119, or 123, or 127.

  Credits:

  4.00

  Description:

  An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

  Term:

  Occasional

- **PSYCH-348 Introduction to Forensic Psychology**

  Prerequisites:

  PSYCH 114. 54 credits or more only.

  Credits:

  4.00

  Description:

  The interface of psychology and the law will be examined in the context of forensic psychological evaluations performed for courts, attorneys and related agencies or facilities. Topics ranging from the role of psychologists in the courtroom, standards of practice, the detection of deception, civil commitment, and ethical issues in forensic psychology will be discussed. Legal standards and the assessment of competence to stand trial, insanity defenses, child abuse and neglect, and child custody/visitation will be explored. This course will review the theoretical and conceptual aspects of the psycho-legal issues in question as well as the practical applications of the skills and knowledge domains needed to perform forensic psychological evaluations. The study of relevant laws and regulations as applied to the interface of psychology and the law will be considered. Discussion will include specialized forensic topics such as expert testimony, the evaluation of sexual offenders, violence risk assessment, and forensic psychological testing.

  Type:
- **SOC-232 Street Gangs**

  Credits: 4.00

  Description:

  This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

  Type:
  
  Cultural Diversity Opt A

- **SOC-234 Crime and Justice in American Society**

  Credits: 4.00

  Description:

  An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.

  Term:
  
  Offered Both Fall and Spring

- **SOC-236 Deviance and Social Control**

  Credits: 4.00

  Description:

  Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

  Term:
Offered Both Fall and Spring

Type:

Social Science

• SOC-242 Law, Health & Human Rights

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional

Note:

Students may use no more than two courses from a major to fulfill requirements for the minor. No more than one course from this minor may count toward the fulfillment of a second minor.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Forensic Science is broadly defined as the application of science to the criminal and civil laws that are enforced by police agencies in a criminal justice system. The Forensic Science minor is constructed to give students a broad foundation in the sciences underpinning forensic science, which will complement any major. However, the Forensic Science minor when taken with a science major will prepare the student for work in a testing or crime laboratory, as well as provide the required courses for entrance into master's or doctoral programs in forensic science.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements
- Forensic Science Courses

- FS-103 Introduction to Forensic Science

  Prerequisites:

  FS-L103

  Credits:

  3.00

  Description:

  Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall

  Term:

  Offered Fall Term

  Type:

  SCI TECH ENGNR

- FS-L103 Introduction to Forensic Science Lab

  Prerequisites:
FS 103 concurrently

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- **FS-303 Introduction to Forensic Science**

Credits:

3.00

Description:

Application of the principles of forensic science in evaluating physical evidence, with emphasis on its role in criminal investigation. Class experiences may include guest lectures and field trips. 3-hour lecture. Normally offered Fall/Spring. Does not satisfy University Natural Science requirement.

Term:

Offered Both Fall and Spring

- **FS-L303 Introduction to Forensic Science Lab**

Prerequisites:

FS 303 concurrently and instructor's permission

Credits:

1.00

Description:

Laboratory experiences related to the collection and analysis of physical evidence as performed by forensic science professionals. Experiments may include forensic microscopy, drug analysis, forensic serology, physical patterns, fingerprint and firearm evidence analysis techniques. 3-hour laboratory. Normally offered Fall/Spring.

Term:
• **FS-428 Criminalistics Practicum**

  **Prerequisites:**
  
  Instructor's permission is required for registration

  **Credits:**
  
  1.00-4.00

  **Description:**
  
  The practicum involves participation in government crime laboratories, private forensic laboratories, private analytical chemical laboratories (including biomedical laboratories), a forensic science project at Suffolk University or other laboratories where the student can demonstrate that he or she can acquire skills applicable to forensic analysis. Students are encouraged to seek a practicum sponsor that suits his/her skills and interests; assistance may be provided by the Forensic Science Program Director. Participation at the laboratories is subject to requirements of the particular laboratory and will be open only to those students approved by the Forensic Science Director. Development of a research report and poster presentation to the department are required elements. Depending on the project undertaken, students may obtain ECR credit.

  **Term:**
  
  Offered Both Fall and Spring

  **Type:**
  
  Expanded Classroom Requirement

• **FS-429 Criminalistics Practicum II**

  **Prerequisites:**
  
  Instructor's permission is required for registration

  **Credits:**
  
  1.00-4.00

  **Description:**
  
  The practicum involves participation in government crime laboratories, private forensic laboratories, private analytical chemical laboratories (including biomedical laboratories), a forensic science project at Suffolk University or other laboratories where the student can demonstrate that he or she can acquire skills applicable to forensic analysis. Students are encouraged to seek a practicum sponsor that suits his/her skills and interests; assistance may be provided by the Forensic Science Program Director. Participation at the laboratories is subject to requirements of the particular laboratory and will be open only to those students approved by the Forensic Science Director. Development of a final research report and oral presentation to the department and the SU community are required elements. Depending on the project undertaken, students may obtain ECR credit.

French Studies

Students can pursue a traditional French major in the study of language, literature and civilization; they can also major in French Studies, which provides a broader English-speaking base and more interdisciplinary choices.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- [French Studies Major Requirements](#)
- [French Studies Minor Requirements](#)
- [French Studies Courses](#)

**Major Requirements: 8 courses, 32 credits**

**Core Requirements (2 courses, 8 credits)**

- **FR-202 Intermediate French II**

  **Prerequisites:**
  
  Take FR-201 or Instructor's consent

  **Credits:**

  4.00

  **Description:**

  Continues to review grammar, practice speaking, and explore authentic cultural and literary texts in this writing-intensive course. Examines short readings, films, and print media.

  **Term:**

  Offered Spring Term

  **Type:**

  BA FOREIGN,Diverse Perspectives

- **FR-205 The Francophone World**
Prerequisites:
FR 202 or Instructor's consent

Credits:
4.00

Description:
Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:
Alternates Fall & Spring

Type:
Cultural Diversity Opt B, BA FOREIGN, Diverse Perspectives

Students who choose to study for two months in CAVILAM, our intensive summer language partner program in Vichy, France will earn eight credits for FR-201 and FR-202. To qualify for admittance to either major, a student must complete the requirement with an average of “B” or higher.

Advanced Literature Courses (2 courses, 8 credits)
Choose two of the following:

• FR-309 Survey of French Literature I
  Prerequisites:
  FR 202 or Instructors permission
  Credits:
  4.00
  Description:
  Analyzes and discusses canonical works of French literature from medieval times to the eighteenth century.
  Term:
  Offered Fall Term
  Type:
  Humanities Literature Requirement, BA FOREIGN

• FR-310 Survey of French Literature II
Prerequisites:
FR-202 or instructor's permission

Credits:
4.00

Description:
Study, analyze and discuss canonical works of French-language literature from the nineteenth through the twenty-first centuries, as they relate to important events in the art, culture, and history of the Francophone world.

Term:
Offered Spring Term

Type:
Humanities Literature Requirement, BA FOREIGN

• FR-315 Mots Doux: Love, Lust and Literature

Prerequisites:
Take FR-205 or Instructor's consent

Credits:
4.00

Description:
Explores the theme of love and its manifestation in representative works while being aware of the evolution of French Literature. Addresses various thematics that accompany a traditional survey of literature course such as critical discourse, aesthetic representation, literary movements, genre, construction of sexual identities, sexual politics as well as representations of ethnicity, class, and culture.

Term:
Occasional

Type:
BA FOREIGN

• FR-318 Face in the Mirror: Writing & Reflecting the Self in French

Prerequisites:
FR-205 and FR-305 or Instructor's consent

Credits:
Examines literature in the French language focusing on memoir, essay, and autobiography. Read authors such as, Montaigne, Rousseau, Lamartine, Colette, Duras, Beauvoir, Le, Chamoiseau, Djebar, Conde, Ernaux, Genet, and Satrapi. Develops an appreciation of the differences between autobiography and autofiction. Explores the question of truth and the fallibility of memory.

Type:

BA FOREIGN

Advanced Courses (4 courses, 16 credits)

Choose four of the following courses above FR-205:

- **FR-214 Marie Antoinette, Fashion Revolutionary**

  Credits:
  4.00

  Description:

  Explores the French Enlightenment and its culture leading up to the French revolution through a focus on one significant figure: Marie-Antoinette. Examines the relationship of female image and the body politic of eighteenth-century France. Considers the legacy of Marie-Antoinette as martyr and fetish object in the nineteenth and twentieth centuries, and focuses on her continuing relevance today. Topics include: women and power; fashion and self-representation; motherhood and domesticity; and revolution and gender iconography. All work in French.

  Term:

  Occasional

- **FR-216 Masterpieces of French and Francophone Literature in English Translation**

  Credits:
  4.00

  Description:

  Masterpieces of French and Francophone Literature in English Translation. Studies works translated into English by major authors from the Middle Ages to the present. Explores drama, fiction, and poetry from many regions of the world: Africa, Western Europe, North America, the Caribbean, and Vietnam.

  Term:

  Alternates Fall & Spring

Type:
• FR-220 French & Francophone Cinema

Credits:
4.00

Description:

Discusses and deepens understanding of French and Francophone cinema from its origins in the late nineteenth century to the early twenty-first century. Explores early works from France, by the Lumiere Brothers and Georges Melies as well as contemporary films from France, Algeria, Burkina Faso, Canada, Haiti, and Senegal.

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry

• FR-306 Composition, Conversation and Advanced Grammar

Prerequisites:
FR-202;

Credits:
4.00

Description:

This course enhances students' conversational and writing skills in French. Authentic language and formal writing skills are detailed. The development of oral proficiency is stressed with a focus on listening comprehension, reading and writing. Advanced French grammar is stressed with a focus on written grammatical exercises. This class is open to heritage speakers as well as those who have participated or are planning on participating in the CAVILAM, CCFS-Sorbonne Programs.

Term:
Alternates Fall & Spring

Type:
BA FOREIGN

• FR-313 Island Fictions Identity

Credits:
This class will explore the rich literary tradition of three Caribbean island-nations: Guadeloupe, Haiti, and Martinique. Class discussion will focus on a wide range of topics including: the different uses of Creole and French; the Negritude, Spiralisme, Antillanite and Creolite movements; the relationship between Africa and the African diaspora; gender and sexuality in the Caribbean; and postcolonial memory and post-colonial history as reflected in the work of prize-winning Caribbean women writers from the twentieth and twenty-first centuries. Normally offered alternate years. The class is taught in English, and is cross-listed with the Black Studies Program as well as the Women's and Gender Studies Program.

**FR-316 Masterpieces of Theatre**

**Prerequisites:**

Take FR-205 and FR-305 or instructor's consent

**Credits:**

4.00

**Description:**

Studies the major plays written in French from the seventeenth through the twenty-first centuries, with a focus on the socio-historical contexts in which the plays emerged. Analyzes and produces scenes from the plays, and reads and performs select scenes at the end of the semester. Explores authors such as Anouilh, Beckett, Cesaire, Genet, Ionesco, Marivaux, Moliere, Py, Racine, Reza, Sartre, and Schwarz-Bart.

**Type:**

BA FOREIGN

Work for Advanced French Courses may be completed in English, with the exception of FR-306.

**Note:**

A maximum of four courses taken at other institutions, courses taken in our intensive summer language partner program with CAVILAM, or courses taken in a study abroad program in a French-speaking country can count toward the major.

Any Seminar for Freshmen with a topic related to the French-speaking countries (e.g. culture, politics, society) may count toward the major with the approval of the major advisor.

**AP Credit:**

Incoming students who receive a score of "4" on the AP French language examination have earned 4 credits (Fr-201). Incoming students who receive a score of "5" on the AP French language examination have earned 8 credits (French 202 and a free elective).

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a
major.
2016-2017 Archived Catalog Information

French Studies

Students can pursue a traditional French major in the study of language, literature and civilization; they can also major in French Studies, which provides a broader English-speaking base and more interdisciplinary choices.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

BA FOREIGN

• FR-402 Internship in French-Speaking Workplace

Prerequisites:
FR-101 and FR-102 and permission of instructor

Credits:
1.00- 4.00

Description:
Designed to enable students to work in a local organization in which the French language and/or Francophone culture is a focus. Libraries, cultural centers, embassies, restaurants and bakeries are some places where this independent study course will carry variable credit, depending on the number of hours devoted to the internship and the related academic work done by the student. Interested students should consult the instructor as they are applying for internships.

Students may take up to two courses taught in English to count towards their French major.

Note:
A maximum of four courses taken at other institutions, courses taken in our intensive summer language partner program with CAVILAM, or courses taken in a study abroad program in a French-speaking country can count toward the major.

AP Credit:
Incoming students who receive a score of "4" on the AP French language examination have earned 4 credits (Fr-201). Incoming students who receive a score of "5" on the AP French language examination have earned 8 credits (French 202 and a free elective).

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Global & Cultural Communication

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Global & Cultural Communication Major Requirements
- Global & Cultural Communication Minor Requirements
- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the departments of Communication & Journalism or Advertising, Public Relations, and Digital Media.

2. Student must also meet all requirements for the Master's degree in Communication.

3. Students will take two Communication graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.

4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.

5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor’s degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

  CJN-112

  Credits:
  4.00

  Description:
  Each time this course is offered it examines a different issue in Journalism, such as social justice journalism, electronic journalism, ethics, political journalism, or international journalism.

  Term:
  Offered Fall Term

- **CJN-405 Communication Theory**

  Prerequisites:
  CJN Majors Only

  Credits:
Description:
Interdisciplinary examination of the development of communication theories from the classical tradition to the modern perspectives of rhetoricians, scientists, psychologists, sociologists, philosophers, and others.

Term:
Offered Both Fall and Spring

- **CJN-415 Review Writing**
  
  Credits:
  4.00
  
  Description:
  Analysis and critique of movies, theater, music, art, and food.
  
  Term:
  Offered Both Fall and Spring

- **CJN-421 Media Seminar**
  
  Prerequisites:
  Take CJN-255; CJN Majors with Senior Standing
  
  Credits:
  4.00
  
  Description:
  In an interactive and intensive seminar format, students examine special media topics through class discussion and engaging in original research. Topics may include: women, gender, and communication technologies; media and social movements; topics in cultural studies; media and democracy; media and community; and participatory media culture.
  
  Term:
  Offered Spring Term

- **CJN-437 Ad Campaigns**
  
  Prerequisites:
  CJN 359, CJN 257
Credits: 4.00

Description:
Principles of advertising campaigns. Students design, plan, and produce a national advertising campaign for a client as members of a simulated agency team.

Term:
Offered Spring Term

- **CJN-440 Health Communication**

  Prerequisites:
  CJN-277;

  Credits: 4.00

  Description:
  This course examines the important functions performed by human and mediated communication for health care consumers and providers. In particular, the course focuses on the use of communication strategies to inform and influence individual and community decisions regarding health.

  Term:
  Occasional

- **CJN-441 Risk and Crisis Communication**

  Prerequisites:
  CJN-2277(formerly CJN-277)

  Credits: 4.00

  Description:
  Provides students with insight into effective risk and crisis management within organizations, including health organizations. Focuses on the application of theories, strategies, and tactics from a public relations perspective. Students understand how communication can prevent, cause, accelerate, and assist in recovery from a crisis.

  Term:
  Occasional
- **CJN-442 Boston Sports Media**

  Credits:
  4.00

  Description:
  The history of Boston sports includes a rich media tradition that has been chronicled in various Boston sports media outlets. This course takes both an historic and contemporary approach to understanding and analyzing Boston sports media and their relationship to Boston college and professional sports.

  Term:
  Occasional

- **CJN-443 Advanced Reporting and Feature Writing**

  Credits:
  4.00

  Description:
  Principles and techniques of advanced news, features, and investigative reporting are studied and applied, with a focus on enterprise reporting. Students develop, organize and write detailed news and news-feature stories based on original research.

  Term:
  Offered Fall Term

- **CJN-444 Advanced Health Communication**

  Prerequisites:
  CJN-340

  Credits:
  4.00

  Description:
  Explores theory and research in the development of persuasive health campaigns in many contexts including social marketing. Examines aspects of health campaigns including formative research, audience segmentation, key message tailoring, and communication tools.

  Term:
  Occasional
• CJN-455 Advanced Media Production

Prerequisites:

  16 Hrs of CJN coursework or CJN advisor consent

  Credits:
  
  1.00-12.00

  Description:
  
  Internships and practicum in Communication and Journalism are available prior to the start of each semester.

  Term:

  Offered Both Fall and Spring

  Type:

  Expanded Classroom Requirement

- **CJN-505 Communication and Journalism Practicum**

  Prerequisites:
  
  12 hours of CJN coursework and CJN advisor consent

  Credits:
  
  1.00-12.00

  Description:
  
  Practicum and internship projects are available prior to the start of each semester. Prerequisites: Journalism majors with a minimum of 12 credits of coursework or permission of the Department Chairperson. 1-3 terms : 1-12 credits.

  Term:

  Offered Both Fall and Spring

  Type:

  Expanded Classroom Requirement
• CJN-506 Honors Seminar

   Prerequisites:

   Senior CJN majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

   Credits:

   4.00

   Description:

   Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

   Term:

   Offered Spring Term

• CJN-510 Independent Study

   Prerequisites:

   An independent study form must be submitted to the CAS Dean's Office.

   Credits:

   1.00-12.00

   Description:

   An independent study experience in Communication and Journalism is available prior to the start of each semester.

   Term:

   Offered Both Fall and Spring

• CJN-2277 Public Relations I: Principles

   Credits:

   4.00

   Description:

   Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

   Term:
• CJN-2355 Production I

Prerequisites:
CJN-152

Credits:
4.00

Description:
Practical exposure to methods of production and production equipment of the media. Students are introduced to basic theoretical concepts, such as three-point lighting and white balancing, and apply those to their productions. Students create a variety of non-fiction videos in teams and/or by themselves.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

• CJN-3376 Public Relations II: Research

Prerequisites:
CJN-2277 (Formerly CJN-277)

Credits:
4.00

Description:
Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:
Offered Both Fall and Spring

• CJN-3377 Public Relations III: Strategic Writing

Prerequisites:
CJN-2277(formerly CJN-277);
Credits:
4.00

Description:
Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:
Offered Both Fall and Spring

- CJN-3455 Production II

Prerequisites:
CJN-2355(formerly CJN-355)

Credits:
4.00

Description:
Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:
Offered Both Fall and Spring

- CJN-4455 Production III

Prerequisites:
CJN-3455(formerly CJN-455)

Credits:
4.00

Description:
Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:
• CJN-4477 Public Relations IV: Campaigns

Prerequisites:
CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

2016-2017 Archived Catalog Information

Government

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- American Politics Concentration
- International Relations Concentration
- Law & Public Policy Concentration
- Political Theory Concentration
- Combined Concentrations
- Minor Requirements
- Accelerated Bachelor's/Master's Degree in Political Science
- Honors
- Societies
- Government Courses

Major Requirements: 11 courses, 41 credits

The major in Government consists of 11 courses (41 credits) with the exception of the International Relations concentration which requires an additional course.

Students will select one of four concentrations:

1. American Politics
2. Law and Public Policy
3. International Relations (12 courses, 44-45 credits)
4. Political Theory

All Government majors in all concentrations must complete the following five core courses (17 credits).

Core Requirements (5 courses, 17 credits)

- GVT-110 Introduction to American Democracy

Credits:
4.00

Description:

An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

Type:

Social Science, BSJ SOCIAL SCIENCE

• GVT-115 Evolution of the Global System

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies.

Type:

Social Science

• GVT-120 Research Methods

Credits:

4.00

Description:

Students will learn how to read and analyze political science research. Focus will be on the use of the scientific method for research on politics and government. Students will learn how to effectively access information for research in political science and learn the steps in writing a research paper, including developing the research question, writing a literature review, selecting a research design, and how to properly cite sources. Students will develop an understanding of approaches to researching and measuring political phenomena.

Type:
• **GVT-201 Data Analysis and Politics**

  **Prerequisites:**

  Sophomore Standing GVT 110 and 120 and Math 128 or higher.

  **Credits:**

  4.00

  **Description:**

  Quantitative analysis is quickly changing the way we understand and engage in politics, how we implement policy, and how organizations across the world make decisions. In this course, we will learn the fundamental principles of statistical inference and develop the necessary programming skills to answer a wide range of political and policy oriented questions with data analysis. Who is most likely to win the upcoming presidential election? Do countries become less democratic when leaders are assassinated? Is there racial discrimination in the labor market? These are just a few of the questions we will work on in the course.

  **Type:**

  Quantitative Reasoning

• **GVT-501 Senior Seminar**

  **Prerequisites:**

  Senior status

  **Credits:**

  1.00

  **Description:**

  This course is designed to provide all Government degree-seeking students with a team-taught capstone experience. In this course, we will collectively discuss and consider career, professional and academic experience for the Government major, including learning more about the fields of public policy, public service, law, nonprofit management, international development, and nongovernmental organization management. This course focuses on career entry and transition, networking for career success, impression management concept and skills, and related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. Pre-requisite: Senior standing.

  **Type:**

  Social Science
Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

American Politics Concentration: 6 courses, 24 credits

This concentration provides a broad overview of the American political process. The concentration offers a strong undergraduate preparation for entry into advanced degree programs, professional careers in public policy, public service, private institutions, and political organizations in the United States. This concentration is offered as a BA or BS.

Concentration Requirements (3 courses, 12 credits)

- GVT-224 Introduction to Public Policy

  Prerequisites:

  GVT 110 and GVT 120 or instructor's permission

  Credits:

  4.00

  Description:

  An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in
governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the
process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-223 American Politics & Institutions

Prerequisites:

GVT 110 or GVT 120 or instructor's permission

Credits:

4.00

Description:

This course will provide an examination of the institutions that are involved in the American policy-making
process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the
United States. The course will focus on a relationship between the President and Congress and how that
relationship impedes or facilitates the public policy process, including the budgetary process. The course will
include a discussion of the president's role as head of the executive branch, and the implementation of
congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered
every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-345 Public Policy Writing

Credits:

4.00

Description:

This course provides an introduction to the importance of written communication in the public discourse and in
public decision-making. The course will examine some of the tools for producing relevant, useful material in the
professional public policy analysis arena. The course will also study the various kinds of written communication
the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that
surround effective communication in public policymaking. Students will engage in drafting several different kinds
of public policy analyses.

Type:

BSJ SOCIAL SCIENCE,Social Science

Electives (3 courses, 12 credits)
Choose three GVT electives. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of American Politics.
International Relations Concentration: 7 courses, 27-28 credits

The purpose of this concentration is to give students the preparation and tools necessary to pursue careers in international affairs, including the public sector, private companies, and independent sector organizations that operate in the international environment. It is also suitable for students planning graduate study in political science, law, or diplomacy. Students with a concentration in International Relations must earn the BA.

Concentration Requirements (3 courses, 12 credits)

- GVT-261 Theory & Practice of International Relations

  Prerequisites:

  GVT 110, GVT 115, and GVT 120 or consent of instructor.

  Credits:

  4.00

  Description:
Review of major approaches to the study of international relations. Definition of concepts such as power, nationalism, imperialism, and dependency. Special attention to the use of force and conflict resolution. Special class project. Normally offered every year.

Type:
Social Science

• **GVT-281 Intro to Comparative Politics**

  **Prerequisites:**
  
  GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

  **Credits:**
  4.00

  **Description:**
  
  This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

  Type:
  Social Science, BSJ SOCIAL SCIENCE

• **GVT-310 Global Political Economy**

  **Prerequisites:**
  
  GVT 281 and GVT 261 or instructors consent

  **Credits:**
  4.00

  **Description:**
  
  This course explores the main premises and approaches to study Global Political Economy. After analyzing the history and development of the international system, it studies how states and markets are interconnected in the creation and reform of economic and political international institutions in the globalization process. It also focuses on the most acute problems of the current international system in the area of IPE, namely, environmental degradation, external debt, poverty, increasing gap between rich and poor countries, and trade conflicts. Offered every year.

  Type:
  Social Science
Electives (3 courses, 12 credits)

Choose one course from Elective Group 1:

- **GVT-308 International Security**
  
  Prerequisites:
  
  GVT 281 and GVT 261
  
  Credits:
  
  4.00
  
  Description:
  
  This course examines the dynamic evolution of the debates on International Security as well as the transformations in the main global and regional security institutions such as UN and NATO. Based upon International Relations perspectives, it analyzes the traditional definitions of security at the national, regional and international levels of analysis since 1945. Likewise, it studies how states and international institutions have revisited the concepts, policies and strategies of security since the end of the Cold War and after the September 11 events, from realist perspectives to the Copenhagen School of security studies. Offered every year.
  
  Type:
  
  Social Science

- **GVT-363 American Foreign Policy**
  
  Prerequisites:
  
  GVT 281 and GVT 261
  
  Credits:
  
  4.00
  
  Description:
  
  A decision-making approach to understanding the domestic and institutional context of U.S. foreign policy. Includes analysis of continuity and change since WWII using case studies of critical decisions, e.g., Korea, Cuba, Vietnam, etc. Not open to freshmen. Prerequisites: GVT 110, GVT 120, GVT 261 or instructor's consent. 1 term - 4 credits. Normally offered every year.
  
  Type:
  
  Social Science, BSJ SOCIAL SCIENCE

- **GVT-463 International Legal Systems**
  
  Prerequisites:
Junior status or above

Credits:
4.00

Description:
This course explains the main components of the international legal system. It begins by exploring the rules, principles and norms that govern the relationship among states, the different cultural and philosophical legal perspectives and the history of the international legal system. The second part of the course covers the study of the sources and subjects of the international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors. The third part of the course addresses a number of significant topics derived from the process of globalization legal norms: human rights, humanitarian intervention, law of the sea, environmental law, and economic relations.

Type:
Social Science

- GVT-465 International and Transnational Organizations

Prerequisites:
GVT-261 Junior Status required

Credits:
4.00

Description:
This course explores the institutional structures, political processes, and impact of international governmental and nongovernmental organizations. It analyzes their increasingly prominent role in efforts to resolve a wide range of global problems and contribution to strengthen the current system of global governance. While the course covers the problems of international security, global distribution of wealth, deterioration of the environmental system, and threats to social welfare, it focuses on the interaction between the United Nations System and regional organizations, on the one hand, and the role of non-governmental organizations in cooperating or competing to solve specific problems in the area of international relations.

Type:
Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE

Choose one course from Elective Group 2:

- GVT-382 Crisis and Integration in Europe

Credits:
4.00

Description:
Why did 17 European countries surrender the sovereign control of their currency and create the Euro? Will Turkey become a member of the European Union? Will Europeans continue free riding the security protection of the United States? Is the integration process another layer of bureaucracy or an institutional instrument to dean with the permanent crises in Europe? There are some of the questions guiding the discussions in the class.

Type:
Social Science

- GVT-383 African Politics
  Prerequisites:
  GVT 110 and GVT 120
  Credits:
  4.00
  Description:
  The political development of Africa in colonial and post-colonial periods. Analysis of the evolution of governmental institutions includes economic, social and personal factors; political forces at work in present day Africa. Not open to freshmen. Normally offered alternate years. Cultural Diversity B
  Type:
  Cultural Diversity Opt B, Social Science

- GVT-385 South Asian Politics
  Prerequisites:
  Not open to freshmen.
  Credits:
  4.00
  Description:
  The main goal of the course is to provide an overview of the main political, economic, and social processes taking place in this region. This course explains the strategies that the eight South Asian countries are implementing in order to deal with the globalization process. The primary focus of the course will be to provide students with the understanding of the main regional trends, but it also has case studies of some of the political systems in the region. Students will analyze and evaluate the concepts learned in basic courses in international relations, political science, and other disciplines in social sciences as they apply to South Asia. Normally offered alternate years.
  Type:
  Social Science
• GVT-393 Latin American Politics Today

Prerequisites:
GVT 281 or instructor consent

Credits:
4.00

Description:
This course examines the evolution of Latin America in the context of globalization. The first part analyzes the main political and economic trends of Latin America as a region, while the second presents the main challenges Mexico is facing today in the area of security. The third part moves forward into the detailed explanation of the transformations of the largest South American countries such as Colombia, Argentina, Chile and Venezuela, among others. The final section looks at the relationship between Latin America and the United States.

Type:
Cultural Diversity Opt B, Social Science

• GVT-411 Politics of North and South East Asia

Prerequisites:
Junior Status required

Credits:
4.00

Description:
This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China's and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

Type:
Social Science, Asian Studies

• GVT-485 Politics of the Middle East

Prerequisites:
Interlocking themes making the contemporary Middle East an area of chronic conflict: Big Power rivalries; social and political change within individual countries; unity and Arab rivalry involved in Arab nationalism; the Palestinian-Israeli-Arab dispute. Normally offered alternate years. Cultural Diversity B

Cultural Diversity Opt B, Social Science

Choose one course from Elective Group 3:

- **GVT-283 Challenges to Development in the Global South**
  
  Credits:
  
  4.00
  
  Description:
  
  Theories dealing with the process of political change in countries of the Third World: the impact of the military, traditional culture and institutions, economic problems, strong personalities and other factors on political life and institutions. Prerequisite: Not open to freshmen. 1 term - 4 credits. Normally offered alternate years. Cultural Diversity B
  
  Type:
  
  Cultural Diversity Opt B, Social Science

- **GVT-307 Globalization of Gender Politics**

  Prerequisites:
  
  Not open to freshmen
  
  Credits:
  
  4.00
  
  Description:
  
  This course examines the interaction between gender and globalization. It discusses the centrality of gender in international development by focusing on gender as one of the most critical factors that affect the success or the failure of globalization. Critically reviewing general theories of globalization, the course presents a historical overview of gender and development. It then explores selected topics: global restructuring and feminization of the labor force, gender in multinational corporations, gender and international migration, sex-tourism, AIDS, and the
impact of the state, religion, and culture in creating social dislocations and inequalities. Finally, we will consider strategies of change and diverse forms of resistance by women. Offered as needed. Cultural Diversity B

Type:

Social Science, Cultural Diversity Opt B, BSJ SOCIAL SCIENCE

- **GVT-311 Politics of the Arab-Israeli Conflict**

  **Prerequisites:**

  Open to Juniors and Seniors

  **Credits:**

  4.00

  **Description:**

  An analysis of the origins and the local, regional, and international dimensions of the Palestinian-Israeli-Arab conflict, this course will examine the conflict through the eyes of the major protagonists and the roles played by them from the early twentieth century to the present: Zionists/Israelis, Palestinians and other Arabs, British, Americans, Soviets. We will also explore the questions of why this conflict has captured the world's attention and why it has gone unresolved since World War II. Finally, we will examine the possibilities and attempts for resolution of what appears to be an intractable human tragedy.

  **Type:**

  Social Science

- **GVT-381 The Politics of the Republic of Ireland And the United Kingdom**

  **Credits:**

  4.00

  **Description:**

  This class will examine the political systems of the Republic of Ireland and the United Kingdom. It will look at the development of the Republic of Ireland from 1916 until the present paying particular attention to the role that the Irish Government has played in fostering economic development and social stability. It will further look at the country's relationships with the European Union and United States of America. The class will present Northern Ireland and the efforts to resolve the troubles there in as the nexus between these foreign relations, domestic politics in both countries and the relationship between the two of them. A key part of the class will be examining the way in which the British political system functions and is organized, paying particular attention to the multicultural and devolutionary policies that the UK government has enacted in the recent past. The impact that these changes in policy have had in resolving the conflict in Northern Ireland will be examined in depth.

- **GVT-384 The U.S. and the International Relations of the Middle East**

  **Credits:**
This course will explore the role played by the United States in the Middle East in the twentieth century, with emphasis on the period since World War II. Our study will begin with a decision-making approach to understanding the domestic and institutional context of America's policy toward the region, followed by an examination of that policy as it confronted radical nationalist, socialist, and Islamic movements, Soviet influence, and specific contemporary problems - the Arab-Israeli conflict, the Lebanese civil war, the Iranian revolution, the Iran-Iraq War, and the Gulf War. Open to non-majors, not open to freshmen. Normally offered alternate years.

Type:

Social Science, BSJ SOCIAL SCIENCE

- GVT-387 Conflict & Development in Asia Service Abroad

Prerequisites:

GVT 281 or instructor's consent. Junior status or above

Credits:

4.00

Description:

Current political trends in the Caribbean and in selected Central American nations. Emphasis will be placed on comparative analysis of public policies in the region, as well as on external factors which impact on politics in the Caribbean and Central America. Students will use academic sources in their analysis, as well as novels and other literary sources for the background of their analysis. Not open to freshmen. Normally offered every third year. Cultural Diversity B

Type:

Cultural Diversity Opt B, Social Science, Expanded Classroom Requirement, Global Engagement Experience

- GVT-389 Politics of China

Prerequisites:

Junior status or above

Credits:

4.00

Description:

Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B
GVT-399 Ethnic Conflict, National Bldg. & International Intervention

Prerequisites:

SOPH STANDING REQUIRED

Credits:

4.00

Description:

The course focuses on the role of ethnic conflict and international intervention in nation building in the post-Cold War period. To understand fully these forces, theories such as colonialism, neo- and post-colonialism, and humanitarian intervention, along with social/economic conditions will be examined. Different case studies will be selected each time the course is offered. Open to non-majors.

GVT-439 Global Environmental Threat

Prerequisites:

Junior Status required

Credits:

4.00

Description:

In the 20th century the general public became aware of the need for following a sustainable lifestyle. Non-governmental organizations, governmental institutions and individuals began to study environmental problems and issues to enhance the concept of conservation of nature and the protection of the planet's biodiversity among other important concepts. However, as we enter the 21st century, we are finding ourselves involved in new environmental threats such as increasingly disturbing natural disasters, eco-terrorism and endless extreme poverty. This course is aimed at learning the basic environmental aspects that affect society and nature as a whole, along with the new issues that are arising and leading scientists to continue new lines of research in the field of environmental conservation and awareness, knowing also that the key to hope lies in the field of environmental education. Offered on the Madrid Campus only.

GVT-462 Debates on Conflicting Ideas in U.S. Foreign Policy
In order to understand the change and continuity in U.S. foreign policy, it is crucial to examine the debate among those who inform the ideas put forward by U.S. foreign policy experts, policymakers, and the group—whether political parties or NGOs—with which they are allies. This course will explore the importance of ideas in U.S. foreign policy from the early days of the republic with an emphasis on the post-World War II period. Prerequisite: GVT 281 or instructor's consent. Open only to Juniors and Seniors. 1 term - 4 credits.

Type:

Social Science

• GVT-466 Governance & Regional Political Economy

Prerequisites:

Junior Status required

Credits:

4.00

Description:

This course examines the intertwined nature of the globalization and regionalization processes from the perspective of global political economy. The first part of the course provides the basic elements and indicators to understand the main challenges the international economy is facing such as crisis, protectionism, and underdevelopment, inter alia. The second part presents the evolution of globalization and regionalism in the past decades. The third and final section compares how the distinct regions in the world are dealing with local and global problems; particularly attention is paid to the European Union, NAFTA, Mercosur and APEC.

Type:

Social Science

• GVT-469 International Human Rights

Prerequisites:

GVT 261 Junior status or above

Credits:

4.00
Description:
An examination of human rights at the end of the 20th century. Attention will be given to the origin and expansion of the concept of human rights in different political systems, the links between culture and human rights and the means and mechanisms for safeguarding human rights with particular reference to the United Nations system.

Type:
Social Science, BSJ SOCIAL SCIENCE

- GVT-507 GVT Study Trip

Prerequisites:
INSTRUCTOR’S PERMISSION

Credits:
4.00

Description:
APPROVAL OF DEPT. CHAIRPERSON. Specially arranged study trip to a foreign country for the purpose of obtaining knowledge through direct experience and observation. Includes prearranged site visits, meetings, required reading and written assignments. ECR

Type:
Social Science, Expanded Classroom Requirement

- GVT-509 United Nations Seminar

Prerequisites:
Instructor's consent

Credits:
4.00

Description:
This course provides an introduction to the study of the role of the United Nations System in the globalization era. The course is divided in two main sections. The first is based on a series of readings, lectures and discussion on the rules, principles and norms which govern the relationship among states and the UN system; it also covers traditional topics such as the sources and subjects of international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors, human rights, humanitarian intervention, global environment, used of armed forces, as well as economic relations. The second part of the course is based on a required study trip to the UN headquarters in order to experience a direct contact with policy-makers within the UN system in a diversity of areas such as security, aid and peacekeeping areas.

Type:
• GVT-521 Internship in Government

Prerequisites:

Government major, sophomore status. Applications to participate must be approved by the Instructor. It is the responsibility of students to arrange internship placements in advance of the course.

Credits:

4.00

Description:

This course is designed to enhance the academic learning students achieve in a substantive government, politics, issue advocacy, public policy or public administration related, supervised, internship that is concurrent with the seminar. Students will use their experiences in the internship of their choosing as a basis for reflection, analysis, skills and career development. Individual learning goals and objectives will be formulated for each student, based on their placement, interest and career goals. Internships must be a minimum of 120 hours in total and approved by the instructor in advance.

Type:

Social Science, Expanded Classroom Requirement

It is also advised that students take advantage of the many internship opportunities that exist for law related placements. Placements are for 4-16 credits and are available at the local level, in Washington, D.C., or at international sites such as London.

Economics Requirement (1 course, 3-4 credits)

Choose one Economics course, preferably Macroeconomics. These courses can be found on the Economics page in this catalog.

Law & Public Policy Concentration: 6 courses, 24 credits

The Law & Public Policy concentration offers students a framework for understanding the legal underpinnings of public policy and the opportunity to study and critically analyze state, federal, and international legal issues and the institutions in which legal decisions are made. The concentration offers a strong undergraduate preparation for entry into advanced degree programs in the law, public policy, and professional careers in public policy, public service, private institutions, and political organizations. Prelaw advising is regularly available for Government majors in any concentration who plan to apply to law school. This concentration is offered as a BA or BS.

Concentration Requirements (4 courses, 16 credits)

- GVT-224 Introduction to Public Policy
  
  Prerequisites:
  
  GVT 110 and GVT 120 or instructor's permission
  
  Credits:
  
  4.00
  
  Description:
An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **GVT-225 U.S. Constitutional Law & Civil Liberties**

  Credits:
  4.00

  Description:
  This course examines a range of contemporary issues introducing students to the U.S. Constitution and the fundamental concepts of constitutional law. Students discuss and analyze topics including separation of powers, federalism, freedom of speech, the death penalty, gun control, and civil rights. We will explore current constitutional challenges and their relationship to law and society.

  Type:
  BSJ SOCIAL SCIENCE, Social Science

- **GVT-245 Courts, Public Policy, and Legal Research**

  Credits:
  4.00

  Description:
  This course examines the public policy-making role of the court system and examines questions such as whether and how courts can spur political and social reform. The direct and secondary effects of key court decisions will be examined. Case studies may focus on issues like civil rights and pro-choice court cases and political activism. The course will also examine the basics of policy-related legal research.

  Type:
  Social Science

- **GVT-345 Public Policy Writing**

  Credits:
  4.00

  Description:
This course provides an introduction to the importance of written communication in the public discourse and in public decision-making. The course will examine some of the tools for producing relevant, useful material in the professional public policy analysis arena. The course will also study the various kinds of written communication the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that surround effective communication in public policymaking. Students will engage in drafting several different kinds of public policy analyses.

Type:

BSJ SOCIAL SCIENCE, Social Science

Electives (2 courses, 8 credits)

Choose two GVT electives. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of Law & Public Policy.

Political Theory Concentration: 6 courses, 24 credits

The Political Theory concentration offers students an understanding of the principles, concepts, norms, and assumptions that inform public policy. The concentration asks students to consider the meaning of justice and the nature and source of legitimate authority. The concentration offers a strong undergraduate preparation for entry into advanced degree programs, public service, private institutions, and political organizations. This concentration is offered as a BA or BS.

Concentration Requirements (3 courses, 12 credits)

- GVT-275 Ancient & Medieval Political Theory

  Credits:

  4.00

  Description:

  This course examines the political ideas of major thinkers of Western civilization, beginning with the ancient Greek philosophers and continuing through the 14th Century. Theorists studied (in English translation) include, among others, Plato, Aristotle, Thucydides, Cicero, Augustine, Thomas Aquinas, and Christine de Pizan. One term, 4 semester hours.
• GVT-276 Modern Political Theory

Prerequisites:
Sophomore standing

Credits:
4.00

Description:
This course examines the political ideas of the major thinkers of Western civilization from the time of Machiavelli to the present. Theorist studied (in English translation) include, among others, Machiavelli, Bodin, Hobbes, Locke, Rousseau, Kant, Mill, Marx, Wollstonecraft, Beauvoir, and Dewey. One term, 4 semester hours. No Prerequisites.

Type:
Social Science,BSJ SOCIAL SCIENCE

Choose one of the following:

• GVT-208 Politics / Religion

Credits:
4.00

Description:
This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:
Cultural Diversity Opt A,Social Science,BSJ SOCIAL SCIENCE,Diverse Perspectives

• GVT-471 Topics in Democracy

Prerequisites:
take gvt-110, gvt-120, or instructor's consent for non majors. Junior status or above

Credits:
4.00
In this course, students will have an opportunity to examine the basic foundations of the democratic theory and practice. Specifically, this course will focus on building blocks of a democratic relationship between people and government, including transparency, accountability, accessibility, and opportunities for effective advocacy and participation. Both classical and modern authors who have weighed in on these issues will be discussed. Normally offered alternate years.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **GVT-473 American Political Thought**

  Prerequisites:

  open to juniors and seniors only

  Credits:

  4.00

  Description:

  Reading and discussion of original works by significant American political thinkers. Readings vary, but might include The Federalist and works by Paine, Jefferson, Calhoun, Thoreau, Sumner, Reed, Dewey, Lippman, Goodman, King, Malcolm X, Carmichael, Hamilton, Friedan and Dillinger. Offered every year.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **GVT-475 Radical & Revolutionary Political Thought**

  Prerequisites:

  Open to Juniors and Seniors only.

  Credits:

  4.00

  Description:

  This course focuses on those political thinkers, such as socialists, feminists, anarchists, pacifists, and ecologists, who have opposed established order and sought to change it. Topics covered include utopian visions (e.g., Owen, Morris, Bellamy, Gilman), criticism of existing institutions (Wollstonecraft, Marx, Fanon, de Beauvoir) and strategies for change (Goldman, Malcolm, Lenin, Cabral). The emphasis is on reading original theoretical works, with several writings assignments. Normally offered every third year.

  Type:

  Social Science
PHIL-414 Topics in Philosophy

Credits:
4.00

Description:
A detailed exposition and evaluation of a specific topic or of the views of one major philosophical thinker or group of thinkers. Readings from both primary and secondary sources. Prerequisite: PHIL 210 or 211 or consent of instructor. 1 term - 4 credits. Normally offered every year.

Term:
Offered Both Fall and Spring

Electives (3 courses, 12 credits)

Choose three GVT electives. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of Political Theory.

- Government Courses

This program provides an accelerated path for undergraduate Government majors to obtain a Master's degree in Political Science. Students can take two graduate level classes during their senior year, one at a time or both at once. Once two graduate classes have been taken, students can take no more until they have otherwise fulfilled the requirements for their undergraduate degree.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of one of the undergraduate degree programs (BA or BS in Government).
2. Student must also meet all requirements for the Master's degree in Political Science (MSPS).
3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.
Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Government Courses

Government majors in all concentrations who have an overall GPA of 3.0 and a GPA of 3.4 or better in the major will be eligible for honors. All students wishing to receive honors in Government must enroll in at least two "honors certified" 300- or 400-level Government courses offered by a full-time Government department faculty member.

To receive honors in the Government Department, students must:

1. Complete the written assignment (research paper or policy analysis) for at least two courses
2. Receive a grade of an A- or above on the papers for the courses for which they are writing
3. Present one paper orally to the Honors Committee (student's choice regarding which paper)
4. Present one paper at the spring Student Research Conference (student's choice regarding which paper)

- **Major Requirements**
- **American Politics Concentration**
- **International Relations Concentration**
- **Law & Public Policy Concentration**
- **Political Theory Concentration**
- **Combined Concentrations**
- **Minor Requirements**
- **Accelerated Bachelor's/Master's Degree in Political Science**
- **Honors**
- **Societies**
- **Government Courses**

- **GVT-005 Summer Campaign Lab**

  **Prerequisites:**
  
  Instructor consent required

  **Credits:**
  
  0.00

  **Description:**
  
  This non-credit, two-week intensive certificate will combine in-depth training on building and running a successful campaign, with site visits to leading political strategy and non-profit agencies. Students will broaden their network meeting leaders in government, public policy, and non-profits by participating in evening speaker series and networking events. Evening teamwork will culminate in a final campaign plan to be presented on the final day of the program.

- **GVT-110 Introduction to American Democracy**

  **Credits:**
An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

**GVT-H110 Honors Intro to American Democracy**

Credits:

4.00

Description:

Special honors section of GVT 110. Offered every fall.

**GVT-115 Evolution of the Global System**

Credits:

4.00

Description:

The goal of this course is to introduce the student to the main actors, social facts and processes that shaped the international system in the nineteenth and twentieth centuries. By analyzing the spread of industrialization, the race for colonies, the thrust of imperialism, and the rapid growth of nationalism, among other factors, this course explains the contradictory and simultaneous trends of unprecedented levels of prosperity and violence in Europe and beyond. While the course examines the role of the United States in the international system, particularly in light of its dominant role since the early twentieth century, it also emphasizes the developments taking place in other regions such as Asia, Africa and Latin America. This will allow students to understand the global arena as a space of complex interconnections involving varieties of forms of production, national political cultures and idiosyncratic traditions. This course sets the foundations for other courses in International Relations and Regional Studies.

**GVT-120 Research Methods**
Students will learn how to read and analyze political science research. Focus will be on the use of the scientific method for research on politics and government. Students will learn how to effectively access information for research in political science and learn the steps in writing a research paper, including developing the research question, writing a literature review, selecting a research design, and how to properly cite sources. Students will develop an understanding of approaches to researching and measuring political phenomena.

**GVT-H120 Honors Research Methods**

**Credits:**

4.00

**Description:**

A special honors section of Research Methods. Students will be introduced to the subfields of political science and learn to analyze political writings. Focus will be on the use of the scientific method for research on politics and government. Students will learn the steps in writing a research paper, including developing the research question and selecting a research design. Attention will be given to the use of statistical analysis and public opinion polling in political research.

**Type:**

Social Science, Honors

**GVT-201 Data Analysis and Politics**

**Prerequisites:**

Sophomore Standing GVT 110 and 120 and Math 128 or higher.

**Credits:**

4.00

**Description:**

Quantitative analysis is quickly changing the way we understand and engage in politics, how we implement policy, and how organizations across the world make decisions. In this course, we will learn the fundamental principles of statistical inference and develop the necessary programming skills to answer a wide range of political and policy oriented questions with data analysis. Who is most likely to win the upcoming presidential election? Do countries become less democratic when leaders are assassinated? Is there racial discrimination in the labor market? These are just a few of the questions we will work on in the course.
• **GVT-204 Women in American Politics**

  **Credits:**
  4.00

  **Description:**
  An examination of women's place in the Constitution; policy concerns; and political participation. Attention will be given to women's societal roles and attitudes towards women of different classes and races and the ways in which these roles and attitudes influence women's political participation. Attention will also be given to the theories and perspectives of the current women's movement as they influence policy considerations. Cultural Diversity A

  **Type:**
  Cultural Diversity Opt A, Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE

• **GVT-208 Politics / Religion**

  **Credits:**
  4.00

  **Description:**
  This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

  **Type:**
  Cultural Diversity Opt A, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

• **GVT-223 American Politics & Institutions**

  **Prerequisites:**
  GVT 110 or GVT 120 or instructor's permission

  **Credits:**
  4.00

  **Description:**
  This course will provide an examination of the institutions that are involved in the American policy-making process. The student will learn about the presidential, (as opposed to the parliamentary) system that exists in the United States. The course will focus on a relationship between the President and Congress and how that
relationship impedes or facilitates the public policy process, including the budgetary process. The course will include a discussion of the president's role as head of the executive branch, and the implementation of congressional policies. Attention will be given to the role of the judiciary in the policy process. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-224 Introduction to Public Policy**

  Prerequisites:

  GVT 110 and GVT 120 or instructor's permission

  Credits:

  4.00

  Description:

  An introduction to the process by which public policies are made in the United States. The class will focus on agenda-setting and policy formulation at the federal level, and will include a discussion of the various actors in governmental institutions that impact public policy. Several policy issues will be used as examples to illustrate the process. Some comparisons will be made to state and local policymaking. Normally offered every year.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **GVT-225 U.S. Constitutional Law & Civil Liberties**

  Credits:

  4.00

  Description:

  This course examines a range of contemporary issues introducing students to the U.S. Constitution and the fundamental concepts of constitutional law. Students discuss and analyze topics including separation of powers, federalism, freedom of speech, the death penalty, gun control, and civil rights. We will explore current constitutional challenges and their relationship to law and society.

  Type:

  BSJ SOCIAL SCIENCE, Social Science

- **GVT-243 American Constitutional Law**

  Prerequisites:

  not open to freshmen
Description:
The growth of Constitutional law and the role of the Supreme Court is examined by analysis of court decisions dealing with Judicial Review, Federalism, Presidential and Congressional powers. Normally offered every year.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **GVT-244 Civil Liberties**

  Prerequisites:
  Not open to Freshmen

  Credits:
  4.00

  Description:
  Analysis of Supreme Court decisions in regard to political and civil rights including freedom of speech, press, assembly and religion, obscenity, race and sex discrimination, and criminal procedure. Normally offered every year.

  Type:
  Social Science, BSJ SOCIAL SCIENCE

- **GVT-245 Courts, Public Policy, and Legal Research**

  Credits:
  4.00

  Description:
  This course examines the public policy-making role of the court system and examines questions such as whether and how courts can spur political and social reform. The direct and secondary effects of key court decisions will be examined. Case studies may focus on issues like civil rights and pro-choice court cases and political activism. The course will also examine the basics of policy-related legal research.

  Type:
  Social Science

- **GVT-247 Intellectual Property- Authors, Inventors, & Brands**
Prerequisites:

GPA at least 3.3

Credits:

4.00

Description:

Are Neanderthal genes patentable? May a fan write Harry Potter 8? Could Amazon.com shut down Amazon Books, a women's bookstore? Is there copyright in a student's class paper? Why does so much copyrighted stuff stay up on YouTube? Can a video game company own its employees' ideas? This friendly, interactive introduction to intellectual property gives the lay of the land, covering the fundamental pillars of copyrights, patents, trademarks, and trade secret, and more far-reaching topics like international and internet intellectual property, and indigenous people and IP. The course is open to all majors, because it is relevant to anyone who deals with creative works, inventions, discoveries, or business. This undergraduate course will be taught at the Suffolk Law School by a member of its faculty. To register students must have a GPA of 3.3 or permission of the instructor. There will be several quizzes and a final exam.

Type:

Arts Admin Minor Elective

- **GVT-H247 Intellectual Property- Authors, Inventors, & Brands**

  Prerequisites:

  GPA at least 3.3 or Honors student only.

  Arts Admin Minor Elective, Honors

- **GVT-253 State and Local Government**

  Prerequisites:
GVT 110/120 OR INSTRUCTOR'S CONSENT

Credits:
4.00

Description:
The development, structure and functions of state governments with emphasis on the government of Massachusetts; the various forms of local government in cities and towns; analysis of the relationships between local, state and federal governments. Normally offered alternate years.

Type:
Social Science, BSJ SOCIAL SCIENCE

• GVT-261 Theory & Practice of International Relations

Prerequisites:
GVT 110, GVT 115, and GVT 120 or consent of instructor.

Credits:
4.00

Description:
Review of major approaches to the study of international relations. Definition of concepts such as power, nationalism, imperialism, and dependency. Special attention to the use of force and conflict resolution. Special class project. Normally offered every year.

Type:
Social Science

• GVT-H261 Honors Theory & Practical International Relations

Prerequisites:
GVT 110, and GVT 120 or consent of instructor.

Credits:
4.00

Description:
Review of major approaches to the study of international relations. Definition of concepts such as power, nationalism, imperialism, and dependency. Special attention to the use of force and conflict resolution. Special class project. Normally offered every year.

Type:
• GVT-275 Ancient & Medieval Political Theory

Credits:
4.00

Description:
This course examines the political ideas of major thinkers of Western civilization, beginning with the ancient Greek philosophers and continuing through the 14th Century. Theorists studied (in English translation) include, among others, Plato, Aristotle, Thucydides, Cicero, Augustine, Thomas Aquinas, and Christine de Pizan. One term, 4 semester hours.

Type:
Social Science

• GVT-276 Modern Political Theory

Prerequisites:
Sophomore standing

Credits:
4.00

Description:
This course examines the political ideas of the major thinkers of Western civilization from the time of Machiavelli to the present. Theorists studied (in English translation) include, among others, Machiavelli, Bodin, Hobbes, Locke, Rousseau, Kant, Mill, Marx, Wollstonecraft, Beauvoir, and Dewey. One term, 4 semester hours. No Prerequisites.

Type:
Social Science, BSJ SOCIAL SCIENCE

• GVT-278 Literature & Politics

Credits:
4.00

Description:
This course will examine novels with an expressed political theme introduced by the author. The theme may be either a central part of the plot, or secondary to the main plot. The class will focus on American as well as foreign works. The class is open to non-majors. Normally offered alternate years.

Type:
• GVT-279 Minority Politics in the United States

Prerequisites:

Sophomore Status Required

Credits:

4.00

Description:

This course is designed to provide an intensive survey of minority politics in the political development of the United States. We will focus on the historical and contemporary experiences of several groups in American politics. In particular, the course will look at four groups that, for reasons of race, have been subjected to systematic discrimination and political subordination in U.S. history: American Indians, African Americans, Latino Americans, and Asian/Pacific Americans. In this course we will work toward an understanding of American politics from the point of view of politically active and engaged persons of color. This course will also take a close look at the future of race and ethnicity in American politics. It is a fundamental premise of this course that an understanding of race and minority politics is necessary to comprehensively understand American political development and many important issues in contemporary American politics. Cultural Diversity A

Type:

Cultural Diversity Opt A, Social Science, BSJ SOCIAL SCIENCE

• GVT-281 Intro to Comparative Politics

Prerequisites:

GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

Credits:

4.00

Description:

This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and comparative content. An effort is made to include countries from all regions of the world. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

• GVT-H281 Honors Intro to Comparative Politics
Prerequisites:
GVT 110 and GVT 120 or consent of instructor.

Credits:
4.00

- **GVT-283 Challenges to Development in the Global South**

  Credits:
  4.00

  Description:
  Theories dealing with the process of political change in countries of the Third World: the impact of the military, traditional culture and institutions, economic problems, strong personalities and other factors on political life and institutions. Prerequisite: Not open to freshmen. 1 term - 4 credits. Normally offered alternate years. Cultural Diversity B

  Type:
  Cultural Diversity Opt B, Social Science

- **GVT-284 Intro to Peace & Conflict: Horn of Africa & International Security**

  Credits:
  4.00

  Description:
  This course analyzes both ongoing and potential conflicts as well as conflict fault-lines in the Horn of Africa region and their implication to International Security. It inquires into the nature of regional conflicts and security complexes and explores ways of resolving them in a peaceful manner. In so doing, it examines such international security threats as state failure, Islamic terrorism, and piracy in the light of the dynamics and evolution of the debates on International Security as well as the transformations in the main global, continental, and regional security institutions such as UN, AU, and IGAD. Based upon International Relations perspectives, it analyzes the traditional definitions of security at the national, regional and international levels of analysis since 1945. Likewise,
it studies how states and international institutions have revisited the concepts, policies and strategies of security in
the post Cold War and post 9/11 world, from realist perspectives to the Copenhagen School of security studies.

Type:

Social Science

- **GVT-306 Women & Public Policy**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This hybrid course will examine the political leadership and influence of women within political institutions and on
  public policy. The course is divided into two parts: Part 1 will examine women in politics, with particular attention
given to the intersectional realities of race, class, gender identity, and ideological orientation. Specific policy areas,
including reproductive choice, housing, pay equity, and domestic relations, will be discussed in Part 2.
  
  Prerequisite: Open to non-majors; not open to freshmen. Normally offered alternate years. Cultural Diversity A

  Type:

  Social Science, Cultural Diversity Opt A, BSJ SOCIAL SCIENCE

- **GVT-307 Globalization of Gender Politics**
  
  **Prerequisites:**
  
  Not open to freshmen
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course examines the interaction between gender and globalization. It discusses the centrality of gender in
  international development by focusing on gender as one of the most critical factors that affect the success or the
  failure of globalization. Critically reviewing general theories of globalization, the course presents a historical
  overview of gender and development. It then explores selected topics: global restructuring and feminization of the
  labor force, gender in multinational corporations, gender and international migration, sex-tourism, AIDS, and the
  impact of the state, religion, and culture in creating social dislocations and inequalities. Finally, we will consider
  strategies of change and diverse forms of resistance by women. Offered as needed. Cultural Diversity B

  Type:

  Social Science, Cultural Diversity Opt B, BSJ SOCIAL SCIENCE

- **GVT-308 International Security**
  
  **Prerequisites:**
This course examines the dynamic evolution of the debates on International Security as well as the transformations in the main global and regional security institutions such as UN and NATO. Based upon International Relations perspectives, it analyzes the traditional definitions of security at the national, regional and international levels of analysis since 1945. Likewise, it studies how states and international institutions have revisited the concepts, policies and strategies of security since the end of the Cold War and after the September 11 events, from realist perspectives to the Copenhagen School of security studies. Offered every year.

Type:

Social Science

• GVT-310 Global Political Economy

Prerequisites:

GVT 281 and GVT 261 or instructors consent

Credits:

4.00

Description:

This course explores the main premises and approaches to study Global Political Economy. After analyzing the history and development of the international system, it studies how states and markets are interconnected in the creation and reform of economic and political international institutions in the globalization process. It also focuses on the most acute problems of the current international system in the area of IPE, namely, environmental degradation, external debt, poverty, increasing gap between rich and poor countries, and trade conflicts. Offered every year.

Type:

Social Science

• GVT-311 Politics of the Arab-Israeli Conflict

Prerequisites:

Open to Juniors and Seniors

Credits:

4.00

Description:
An analysis of the origins and the local, regional, and international dimensions of the Palestinian-Israeli-Arab conflict, this course will examine the conflict through the eyes of the major protagonists and the roles played by them from the early twentieth century to the present: Zionists/Israelis, Palestinians and other Arabs, British, Americans, Soviets. We will also explore the questions of why this conflict has captured the world's attention and why it has gone unresolved since World War II. Finally, we will examine the possibilities and attempts for resolution of what appears to be an intractable human tragedy.

Type:
Social Science

- GVT-314 Media, Chaos, and Culture That Changed America

  Credits:
  4.00

  Description:
  The overall goal of this course is to understand why 1968 is considered one of the most tumultuous years in the 20th century as regards the news media; music and theater; television and film censorship; and in the shift in culture and mores of an entire subset of the population. The course will focus on specific touchstones that elucidate the communication to both the mainstream public, know broadly as the Silent Majority, and the new emerging 'boomers', whose values and attitudes still drive the media ten years into the 21st century. Students will learn how a single year of media can change forever how one part of a culture views itself, while at the same time discovering how another part of that same culture continues to resist those changes 40 years later. Students will learn how many of the seeds of ideas they take for granted in 2011, including educational and sports equality (Title 9) for women; environmental sensitivity, and gay rights were planted in the print, films and music of 1968, but didn't bloom until the years which followed. Guest speakers, films and lectures will be used to reinforce material from the texts.

  Type:
  BSJ SOCIAL SCIENCE, Social Science

- GVT-323 Political Survey Research

  Prerequisites:
  OPEN TO JUNIORS & SENIORS

  Credits:
  4.00

  Description:
  Everything needed to design, carry out, and interpret a political survey. Topics covered will include questionnaire design, sampling, interviewing, coding data, and univariate and bivariate analysis of the results. Multivariate analysis will be discussed but not studied in-depth. An actual survey will be conducted as a class project. Normally offered every year.

  Type:
• **GVT-334 Law, Food, Tobacco, Politics & Corporations**

  Credits:
  
  4.00

  Description:

  Corporations, which are one of the dominant institutions of the early 21st century, are driven not by the public good, but by the profit motive. Decisions made by two industries dominated by corporations, the food industry and the tobacco industry, have a tremendous negative impact on America's public health. What, if anything, can be done to counteract the harm caused by Fast Food & Big Tobacco?

• **GVT-335 Law, Politics and Public Health**

  Credits:
  
  4.00

  Description:

  Law is one of the primary tools used to protect public health in the United States. This course will use various case studies (tobacco industry, food industry, health care policy, etc.) to explore innovative uses of the law in diverse areas related to public health. Students will learn about the ways in which attorneys, public officials, politicians, and public health practitioners work together to make public health policy. Normally offered alternate years.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

• **GVT-337 Public Policy & Business**

  Prerequisites:

  Not open to freshmen

  Credits:
  
  4.00

  Description:

  Public policy-makers' interests in formulating and implementing policy in the areas of environmental protection, consumer protection, equal employment opportunity, health care, taxation and competition with a focus on business responsibility will be critically analyzed. Costs and benefits to the public and business will be evaluated. Prerequisite: Open to non-majors; not open to freshmen.Normally offered alternate years.

  Type:
• GVT-339 Community Advocacy

Prerequisites:

GVT 110 OR GVT 120

Credits:

4.00

Description:

This course represents a unique opportunity for students to develop a general understanding of the relationship between politics and the community; a systematic and holistic way of viewing and analyzing the impact of community-based, community-wide organizations and efforts. Normally offered alternate years.

Type:

Social Science

• GVT-340 Moot Court

Credits:

4.00

Description:

Moot Court consists of simulated arguments in front of the Supreme Court of the United States. Students brief approximately 20 Supreme Court cases and apply them to a hypothetical case before the Court. Students form written and oral arguments based on two constitutional questions in the hypothetical. Two person teams will develop legal oral arguments in favor of their clients. Students learn how to compose written briefs, develop a knowledge of case law, learn how to effectively respond to questioning, and develop forensic skills, and courtroom demeanor. Moot Court is a great preparation course for undergraduate students planning to attend law school.

Type:

Social Science

• GVT-343 State Court Process & Policy

Prerequisites:

Junior status or above

Credits:

4.00

Description:
Contemporary state court processes, progress and problems including trial and appellate court practice, procedure and participants; plea bargaining, alternative dispute resolution; policy making. Normally offered alternate years.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **GVT-345 Public Policy Writing**

  Credits:

  4.00

  Description:

  This course provides an introduction to the importance of written communication in the public discourse and in public decision-making. The course will examine some of the tools for producing relevant, useful material in the professional public policy analysis arena. The course will also study the various kinds of written communication the policy makers and advocates regularly utilize. The course also provides an introduction to the constraints that surround effective communication in public policymaking. Students will engage in drafting several different kinds of public policy analyses.

  Type:

  BSJ SOCIAL SCIENCE, Social Science

- **GVT-346 The American Presidency**

  Prerequisites:

  GVT 110 AND GVT 120 OR INSTRUCTOR'S CONSENT

  Credits:

  4.00

  Description:

  Perspectives on the role and problems of the presidency in American political life; the nature and difficulties of presidential influence and effectiveness, presidential authority within our system of government, and the impact of presidential character. Normally offered alternate years.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **GVT-347 Legislative Politics**

  Prerequisites:

  GVT 110 and GVT 120 or instructor's consent
The structure and functioning of legislatures. Particular emphasis on the U.S. Congress, how it works and how it compares with other legislatures. The role of legislatures in a democracy. Normally offered alternate years.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **GVT-355 American Parties & Politics**

  Prerequisites:
  
  GVT 110 AND GVT 120, or instructor's consent

  Credits:
  4.00

  Description:

  Historical overview of party development in the U.S. and of ideological and political trends as reflected in voting behavior. Recent developments in party structure, electoral strategies and political style. The party crisis vs. the art of political campaigning. Normally offered alternate years.

  Type:
  Social Science, BSJ SOCIAL SCIENCE

- **GVT-357 Power & Politics in America's Cities**

  Prerequisites:
  
  GVT 110/120 OR INSTRUCTOR'S PERMISSION Junior status or above

  Credits:
  4.00

  Description:

  This online course is uniquely designed to examine the power dynamics and struggles that characterize the urban political landscape. Mayor leadership and corruption, community engagement and apathy, and resource and public service expansion and retraction will be critically examined as key elements that can help some cities grow and hasten the decline of others. Within an online environment we will study the dynamic cities of New York City, Chicago, Atlanta, Boston, Cleveland, Detroit, and New Orleans. Additionally, we will examine broader trends that emerge from and examination of cities by size and region.

  Type:
• GVT-359 Hockey, International Development & Politics

Credits:
4.00

Description:

This class examines the way in which national identity, global and regional economics and international development intersect. It uses the professionalization of the sport of hockey and its subsequent spread around the globe as its case. It will look at the rise of the pro game, the way in which it shapes national identity in the Canadian case, the way in which the pro business model has changed in response to broad socio-economic changes in North America and geo-political shifts around the globe, especially in Eastern Europe and the Former Soviet Union.

Type:
Social Science,Diverse Perspectives

• GVT-360 Elections and Voting

Credits:
4.00

Description:

How are elections administered in the United States? Do Americans have confidence in the electoral process? Should they? Why or why not? This course will examine elections in the United States in detail -- from how they are funded to how they are administered to how voters behave. Students will have a choice of either serving as poll workers during the November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions. ECR

Type:
Humanities & History, Social Science, BSJ Social Science, Diverse Perspectives

• GVT-361 Voting Rights and Election Law

Credits:
4.00

Description:

How do laws governing the political process affect and impact political power relationships? This course investigates topics including redistricting, the right to vote, voter turnout and mobilization, election administration, the Voting Rights Act, and political parties. Students will have a choice of either serving as poll workers during the
November election or organizing and conducting research of potential voters. Students will gain hands-on experience in actual research design, election administration, and non-partisan get-out-the-vote activities. In addition, students will gain a deeper understanding of the relationship between attitudes, opinion, and voting behavior in American politics and institutions.

• GVT-363 American Foreign Policy

Prerequisites:

GVT 281 and GVT 261

Credits:

4.00

Description:

A decision-making approach to understanding the domestic and institutional context of U.S. foreign policy. Includes analysis of continuity and change since WWII using case studies of critical decisions, e.g., Korea, Cuba, Vietnam, etc. Not open to freshmen. Prerequisites: GVT 110, GVT 120, GVT 261 or instructor's consent. 1 term - 4 credits. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

• GVT-365 IP & Public Domain: Intro to Law & Policy

Prerequisites:

54 credits earned and GPA of 3.3 or higher

Credits:

4.00

Description:

This introduction to legal study explores law as it is practiced (the law on the books and their application) and as it is experienced in society by everyday people, clients and citizens. The goal of this course will be two-fold: (1) to introduce undergraduate students to the study of law as it is taught in law school, with an emphasis on reading cases, making arguments as lawyers do, and learning about the intersection of legal application and policymaking; and (2) study intellectual property law (e.g., copyright, patent, trademark and trade secrets) as they have evolved over the 20th century with an emphasis on the importance of the public domain in the digital age. The course will be team taught by professors from the law school.

Social Science, Honors

- GVT-372 Coastal Zone Management

Prerequisites:
Instructor's Consent

Credits:
4.00

Description:

This course presents a survey of a coastal environment, its physical characteristics, natural systems, economic uses, and development pressures. Lectures examine strategies formulated in the U.S. for land and water resource management in the coastal zone. The roles of federal, state and local government, environmental groups and resource users are also explored. Finally, by comparing coastal zone management problems in the U.S. to those elsewhere in the world, students gain a global perspective. Normally offered every years. The course available through the Marine Studies Consortium and will be taught on the campus of one of the Consortium's member institutions.
• GVT-381 The Politics of the Republic of Ireland And the United Kingdom

Credits:
4.00

Description:
This class will examine the political systems of the Republic of Ireland and the United Kingdom. It will look at the development of the Republic of Ireland from 1916 until the present paying particular attention to the role that the Irish Government has played in fostering economic development and social stability. It will further look at the country's relationships with the European Union and United States of America. The class will present Northern Ireland and the efforts to resolve the troubles there in as the nexus between these foreign relations, domestic politics in both countries and the relationship between the two of them. A key part of the class will be examining the way in which the British political system functions and is organized, paying particular attention to the multicultural and devolutionary policies that the UK government has enacted in the recent past. The impact that these changes in policy have had in resolving the conflict in Northern Ireland will be examined in depth.

• GVT-382 Crisis and Integration in Europe

Credits:
4.00

Description:
Why did 17 European countries surrender the sovereign control of their currency and create the Euro? Will Turkey become a member of the European Union? Will Europeans continue free riding the security protection of the United States? Is the integration process another layer of bureaucracy or an institutional instrument to dean with the permanent crises in Europe? There are some of the questions guiding the discussions in the class.

Type:
Social Science

• GVT-383 African Politics

Prerequisites:
GVT 110 and GVT 120

Credits:
4.00

Description:
The political development of Africa in colonial and post-colonial periods. Analysis of the evolution of governmental institutions includes economic, social and personal factors; political forces at work in present day Africa. Not open to freshmen. Normally offered alternate years. Cultural Diversity B

Type:
Cultural Diversity Opt B, Social Science

- **GVT-384 The U.S. and the International Relations of the Middle East**

  **Credits:**
  4.00

  **Description:**
  This course will explore the role played by the United States in the Middle East in the twentieth century, with emphasis on the period since World War II. Our study will begin with a decision-making approach to understanding the domestic and institutional context of America's policy toward the region, followed by an examination of that policy as it confronted radical nationalist, socialist, and Islamic movements, Soviet influence, and specific contemporary problems - the Arab-Israeli conflict, the Lebanese civil war, the Iranian revolution, the Iran-Iraq War, and the Gulf War. Open to non-majors, not open to freshmen. Normally offered alternate years.

  Type:
  Social Science, BSJ SOCIAL SCIENCE

- **GVT-385 South Asian Politics**

  **Prerequisites:**
  Not open to freshmen.

  **Credits:**
  4.00

  **Description:**
  The main goal of the course is to provide an overview of the main political, economic, and social processes taking place in this region. This course explains the strategies that the eight South Asian countries are implementing in order to deal with the globalization process. The primary focus of the course will be to provide students with the understanding of the main regional trends, but it also has case studies of some of the political systems in the region. Students will analyze and evaluate the concepts learned in basic courses in international relations, political science, and other disciplines in social sciences as they apply to South Asia. Normally offered alternate years.

  Type:
  Social Science

- **GVT-386 Conflict and Development: Continuation**
This course will briefly examine the political history of what would become Yugoslavia, beginning in the interwar period and following the process of unification of the South Slav state. After analyzing Yugoslavian politics during the Tito era, attention will turn to what happened to this state after Tito's death in 1980. Students will be expected to understand the controversies over what caused the break-up of Yugoslavia, and will read many opposing interpretations of the events that began in the 1990s and continue today. Offered at the Madrid Campus.

Type:
Social Science

**GVT-387 Conflict & Development in Asia Service Abroad**

Prerequisites:
GVT 281 or instructor's consent. Junior status or above

Credits:
4.00

Description:
current political trends in the Caribbean and in selected Central American nations. Emphasis will be placed on comparative analysis of public policies in the region, as well as on external factors which impact on politics in the Caribbean and Central America. Students will use academic sources in their analysis, as well as novels and other literary sources for the background of their analysis. Not open to freshmen. Normally offered every third year.

Type:
Cultural Diversity B

**GVT-389 Politics of China**

Prerequisites:
Junior status or above

Credits:
4.00

Description:
Emphasis on a particular approach to the problems of economic modernization and political development. Historical background; the revolutionary movement; present political structures and current issues. Cultural Diversity B

Type:
Cultural Diversity Opt B, Social Science, Asian Studies

- GVT-390 Global Politics of Resistance

Credits:
4.00

Description:
Utilizing the theoretical frameworks of Comparative Politics and International Relations, this course will focus on a critical analysis of contemporary forms of resistance politics, such as those culminating in popular struggles for peace, democracy, human rights, economic justice, gender equality, environment, and the rights of indigenous peoples.

Type:
Social Science

- GVT-391 Canada: Multicultural Politics

Prerequisites:
GVT 110/120 or Instructor's permission

Credits:
4.00

Description:
This course examines the Canadian model of incorporating diverse communities into its constitutional and political framework, including the founding British North American Act of 1867, the 1982 Constitution Act, and two later attempts at constitutional reform. Canada's role in balancing two official languages, English and French, is discussed, as is its recognition of a First Nations native-governed territory in the Arctic. This course introduces students to the Canadian polity and compares its parliamentary system with the U.S. separation of powers system. Prerequisites: GVT 110, GVT 120 or instructor's consent. Normally offered alternate years. Cultural Diversity B

Type:
Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- GVT-393 Latin American Politics Today

Prerequisites:
GVT 281 or instructor consent

Credits:
4.00

Description:
This course examines the evolution of Latin America in the context of globalization. The first part analyzes the main political and economic trends of Latin America as a region, while the second presents the main challenges Mexico is facing today in the area of security. The third part moves forward into the detailed explanation of the transformations of the largest South American countries such as Colombia, Argentina, Chile and Venezuela, among others. The final section looks at the relationship between Latin America and the United States.

Type:
Cultural Diversity Opt B, Social Science

- **GVT-398 Terrorism and Extremism in South and Central Asia**

  Prerequisites:

  Junior status or above

  Credits:

  4.00

  Description:

  This course discusses terrorism and extremism in South and Central Asia as forms of political violence and its effects on the security of the region and the world. Students will develop a working definition of terrorism and extremism and analyze tenets of states security policies. They will study the history of origin, political, economic and social causes of terrorism, the nature of Islamist terrorist organizations, their strategic goals, motivations, and the threats they pose to peace and development from the point of view of international relations and comparative politics. On the base of case studies and class discussions, students examine theories and instances of ideological, religious, and political extremism as a foundation for terrorism. Through thorough investigation of different cases students will acquire unique knowledge of the Al-Qaeda threat in Pakistan, Afghanistan and Central Asia, as well as activities of groups as the Islamic Movement of Uzbekistan, Lashkar-e-Taiba and others.

  Type:

  Social Science

- **GVT-399 Ethnic Conflict, National Bldg. & International Intervention**

  Prerequisites:

  SOPH STANDING REQUIRED

  Credits:

  4.00
Description:
The course focuses on the role of ethnic conflict and international intervention in nation building in the post-Cold War period. To understand fully these forces, theories such as colonialism, neo- and post-colonialism, and humanitarian intervention, along with social/economic conditions will be examined. Different case studies will be selected each time the course is offered. Open to non-majors.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **GVT-401 Political Marketing**

  Prerequisites:
  
  Junior status or above

  Credits:
  
  4.00

  Description:

  This class will examine the techniques used to market political candidates, parties, issues, interest groups and think tanks in the modern American polity, as well as in Canada and the EU. The class will examine the causes and impact of the change that many observers have seen in the American polity from a civil to a consumptive political culture and question the extent to which this is a U.S. based versus more global phenomenon. At the same time, the class will aim to provide the student will a hands-on understanding of the way in which various marketing techniques are employed to sell politics. The techniques will include message development, branding, micro-targeting, and political marketing campaign strategy by looking at a series of cases from around the world. Cases examined will include the Barack Obama, Hillary Clinton and John McCain campaigns from 2008, the effort to brand the Conservative Party and New Labour in the United Kingdom.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **GVT-404 International Political Marketing**

  Prerequisites:

  At least 54 credits required.

  Credits:

  4.00

  Description:

  This class will examine the ways in which political marketing is conducted across the globe. It will look at a variety of political systems and cultures in an effort to discern which techniques work best with which political systems and political cultures. The cases will be drawn from all 7 continents and a wide diversity of socio-political cultures. Cases are likely to include Canada, New Zealand, India, Japan, Ireland, the United Kingdom, Argentina, Russia...
and many others. By the end of the class, students should have a strong sense of how political marketing is done globally and which techniques work best with which systems.

- **GVT-410 Politics of Korea**

  Prerequisites:

  Junior Status required

  Credits:

  4.00

  Description:

  Study of the government and politics of North and South Korea, including the political systems of the two countries and relationship between them, including issues of reunification, nuclear weapons, and democratization. Offered alternate years.

  Type:

  Social Science, Asian Studies

- **GVT-411 Politics of North and South East Asia**

  Prerequisites:

  Junior Status required

  Credits:

  4.00

  Description:

  This course examines the cultural background and political systems mainly of China, Korea and Japan, also touching upon the small tiger states in South-East Asia. It elucidates the historical origins, evolution and current trajectory of these states with a particular concentration on North Korea. One further concentration is the interplay of domestic and foreign policy in the relations of these states, regional stability and cooperation. Topics include history, social structure, the interplay of culture and ideology, political economy, humanitarian issues, security, and the politics of North Korean domestic and foreign policy. We will spend considerable time analyzing China’s and North Korea's relationship with regional and world powers and examining the origins, history, and implications of the North Korean nuclear weapons program. Students will be expected to demonstrate the ability to apply theoretical and historical knowledge toward analyzing the rapidly evolving landscape of contemporary issues related to East Asia.

  Type:

  Social Science, Asian Studies

- **GVT-420 German Greens and Environmentalism**
Prerequisites:
Junior Status required

Credits:
4.00

Description:
The rise of the Green Party, from its grass-roots beginnings to participation in the federal government. Background on the development of green consciousness in Germany and Europe since the early 20th century. Present governmental policies and programs (e.g., alternative energy sources, organic farming, recycling, dismantling of nuclear power). Cross-listed GER 420 and ENST 420

Type:
Social Science, BSBA SOCIAL CHANGE

- GVT-428 Congressional Parties, Leadership, & Public Policy

  Prerequisites:
  Junior status or above

  Credits:
  4.00

  Description:
  This course focuses on the Congressional leadership, parties in Congress and their impact on political interactions, and public policy. The course will examine the relationship between the leadership in the Congress and the powerful elements in the House and Senate such as committee chairmen and the party caucuses as well as the media and lobbyists. Emphasis is on the decades long trend toward greater political polarization and its impact on the ability of the institution to respond effectively current national problems.

  Type:
  Social Science

- GVT-434 Immigration Policy and Politics

  Prerequisites:
  Junior Status required

  Credits:
  4.00

  Description:
This course examines how American governmental institutions, political actors, and processes have both shaped and responded to one of the most significant and complex issues of public policy facing the nation: immigration to the United States. This class will explore a number of intriguing and difficult policy topics related to the almost unprecedented level of immigration that the U.S. has been experiencing. The focus of the class will include the following: admissions, citizenship, deportation and detention (including that of suspected terrorists), refugee/asylum law, and highly contested issues of today, such as definitions of citizenship, immigrant rights, and border enforcement. A major objective of this course is to provide students with the opportunity to conduct their own original research in American politics by delving into some aspect of immigration as a public policy issue.

**Type:**

Social Science, BSJ SOCIAL SCIENCE

- **GVT-435 Race and Public Policy**

  **Prerequisites:**

  Junior Status required

  **Credits:**

  4.00

  **Description:**

  Public policy's impact on Blacks Chicano's, Native Americans Puerto Ricans, and other minority groups; how public policy has contributed to racial oppression; policies for attaining racial equality; political strategies of minority groups. Cultural Diversity A

- **GVT-438 Environmental Policy & Politic**

  **Prerequisites:**

  This course will have a service learning component Junior Status required

  **Credits:**

  4.00

  **Description:**

  From Rio to the Boston Harbor Project, this course examines the policies and politics of the environment. It examines the origins of the environmental movement in the United States focusing on the development and present function of government and non-government organizations responsible for the development and implementation of global, national, state and local environmental policies.

  **Type:**

  Social Science, BSJ SOCIAL SCIENCE
• GVT-439 Global Environmental Threat

  Prerequisites:

  Junior Status required

  Credits:

  4.00

  Description:

  In the 20th century the general public became aware of the need for following a sustainable lifestyle. Non-governmental organizations, governmental institutions and individuals began to study environmental problems and issues to enhance the concept of conservation of nature and the protection of the planet's biodiversity among other important concepts. However, as we enter the 21st century, we are finding ourselves involved in new environmental threats such as increasingly disturbing natural disasters, eco-terrorism and endless extreme poverty. This course is aimed at learning the basic environmental aspects that affect society and nature as a whole, along with the new issues that are arising and leading scientists to continue new lines of research in the field of environmental conservation and awareness, knowing also that the key to hope lies in the field of environmental education. Offered on the Madrid Campus only.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

• GVT-H439 Honors Global Environmental Threat

• GVT-441 Ready, Set, Run!

Prerequisites:
Junior Status required

Credits:
2.00

Description:
Designed to introduce students to the nuts and bolts of preparing to run for office or guiding a candidate through the process. Students learn how to file nomination papers, develop a field team, and create a general branding strategy.

Type:
Social Science

• GVT-442 Candidate Definition

Prerequisites:
Junior Status required

Credits:
1.00

Description:
Students learn the basics of how candidates successfully introduce their candidacy to the public. From announcing the campaign to conducting meet and greets to producing candidate photos, this course guides through the process of effectively defining the candidate.

Type:
Social Science

• GVT-443 Candidate Media Strategy 101

Prerequisites:
Junior status required

Credits:
1.00

Description:
Students learn the fundamentals of how to maximize positive media coverage with attention paid to generating endorsements, developing non-paid media, and persuading voters.

Type:
Social Science

- **GVT-444 Campaign Issues: Taking a Stand**

  Prerequisites:
  Over 54 credits required.

  Credits:
  1.00

  Description:
  In this highly interactive course, students learn how to develop position papers, conduct opposition research, and ultimately use their knowledge to convey information effectively in political speeches and debates. Attention paid to message development.

  Type:
  Social Science

- **GVT-446 Getting Out the Vote**

  Prerequisites:
  Junior Status required

  Credits:
  1.00

  Description:
  Learn the cutting edge techniques to help register new voters, identify voters, and effectively manage election-day operations to increase turnout for your candidacy. Learn how to successfully recruit and retain volunteers.

  Type:
  Social Science

- **GVT-447 Race, Gender, and Sexual Orientation on Campaigns**

  Prerequisites:
  Need to have completed at least 54 credits
This course will examine the role that race, gender and sexual orientation fill on political campaigns. We will explore the challenges and opportunities that women, people of color, and LGBT individuals face as candidates, the consequences diversity (or lack thereof) on campaign team, and how race, gender, and sexual orientation are mobilized by campaigns to reinforce messages, target voters and raise money.

Type:
Social Science

- **GVT-450 Lobbying, the Media and Public Policy Opinion, and Politics**

  **Prerequisites:**
  Junior status or above

  **Credits:**
  4.00

  **Description:**
  This class will examine the role of lobbyist and the media in influencing state and national decision makers and public policy. Focusing primarily on current issues relating to energy and environmental policy, we will discuss and critically examine all sides of today's hot topics - renewable power, climate change, sustainability and others. The goal is not to determine who is right and who is wrong, but rather to get behind the headlines and separate fact from hype and discuss how and why certain policy decisions are made and how policy makers are influenced. You'll gain an appreciation as to how public opinion, lobbyists and the media (even celebrities!) can actually change government priorities - and not always for the better, as rising public opinion and political pressure often collides with well established scientific evidence.

  **Type:**
  Social Science, BSJ SOCIAL SCIENCE

- **GVT-452 Boston's Future: Local Politics in a Global Context**

  **Prerequisites:**
  Junior Status required

  **Credits:**
  4.00

  **Description:**
This year, Boston's longest-serving mayor of 20 years, Thomas Menino, announced he would not seek re-election. Twelve candidates are now vying to be mayor of Boston. Boston is among the most educated cities and is an epicenter for research and development, building an innovation economy of engagement, community networks, and collaboration. Yet it faces a variety of challenges. Boston also counts itself as third most unequal cities in the United States in terms of income inequality. Can Boston sustain its success while also lifting more of its population out of poverty? This course examines these questions by focusing attention on the 2013 mayoral election. What prescriptions for success and visions for the future of Boston do the various candidates offer? What constituencies vote? How will the successful candidate craft a winning coalition? Guest speakers, including candidates, local media analysts, and policy makers will highlight key aspects of the urban issues we will examine. Neighborhood visits and a variety of readings will round out the course. For any student interested in the interplay between politics, local government and the global economy, this course is for you.

Type:
Social Science

**GVT-462 Debates on Conflicting Ideas in U.S. Foreign Policy**

Prerequisites:
GVT 261. Junior status or above

Credits:
4.00

Description:
In order to understand the change and continuity in U.S. foreign policy, it is crucial to examine the debate among those who inform the ideas put forward by U.S. foreign policy experts, policymakers, and the group-whether political parties or NGOs-with which they are allies. This course will explore the importance of ideas in U.S. foreign policy from the early days of the republic with an emphasis on the post-World War II period. Prerequisite: GVT 281 or instructor's consent. Open only to Juniors and Seniors. 1 term - 4 credits.

Type:
Social Science

**GVT-463 International Legal Systems**

Prerequisites:
Junior status or above

Credits:
4.00

Description:
This course explains the main components of the international legal system. It begins by exploring the rules, principles and norms that govern the relationship among states, the different cultural and philosophical legal perspectives and the history of the international legal system. The second part of the course covers the study of
the sources and subjects of the international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors. The third part of the course addresses a number of significant topics derived from the process of globalization legal norms: human rights, humanitarian intervention, law of the sea, environmental law, and economic relations.

Type:

Social Science

• GVT-465 International and Transnational Organizations

Prerequisites:

GVT-261 Junior Status required

Credits:

4.00

Description:

This course explores the institutional structures, political processes, and impact of international governmental and nongovernmental organizations. It analyzes their increasingly prominent role in efforts to resolve a wide range of global problems and contribution to strengthen the current system of global governance. While the course covers the problems of international security, global distribution of wealth, deterioration of the environmental system, and threats to social welfare, it focuses on the interaction between the United Nations System and regional organizations, on the one hand, and the role of non-governmental organizations in cooperating or competing to solve specific problems in the area of international relations.

Type:

Social Science, BSJ SOCIAL SCIENCE, BSBA SOCIAL CHANGE

• GVT-466 Governance & Regional Political Economy

Prerequisites:

Junior Status required

Credits:

4.00

Description:

This course examines the intertwined nature of the globalization and regionalization processes from the perspective of global political economy. The first part of the course provides the basic elements and indicators to understand the main challenges the international economy is facing such as crisis, protectionism, and underdevelopment, inter alia. The second part presents the evolution of globalization and regionalism in the past decades. The third and final section compares how the distinct regions in the world are dealing with local and global problems; particularly attention is paid to the European Union, NAFTA, Mercosur and APEC.

Type:
• GVT-467 Comparative Social Movements

Prerequisites:

Junior status

Credits:

4.00

Description:

This class examines the political ramifications of social movements primarily but not exclusively within the United States. It looks at ideology, beliefs and mechanisms of mobilization. Another important focus is an analysis of non-white social movements in this country and their impact on domestic politics. Among the movements to be examined are: the Pan-African movement 1919-1939 which will, to some extent, take us outside this country; the U.S. Civil Rights Movement 1955 to 1969 which covers the rise of the Black Power movement; and the U.S. Labor Movement 1900 to 1955 in terms of non-white influence on its programmatic goals. Normally offered alternate years. Cultural Diversity B

• GVT-469 International Human Rights

Prerequisites:

GVT 261 Junior status or above

Credits:

4.00

Description:

An examination of human rights at the end of the 20th century. Attention will be given to the origin and expansion of the concept of human rights in different political systems, the links between culture and human rights and the means and mechanisms for safeguarding human rights with particular reference to the United Nations system.

Type:

Social Science,BSJ SOCIAL SCIENCE

• GVT-471 Topics in Democracy

Prerequisites:

take gvt-110, gvt-120, or instructor’s consent for non majors. Junior status or above
In this course, students will have an opportunity to examine the basic foundations of the democratic theory and practice. Specifically, this course will focus on building blocks of a democratic relationship between people and government, including transparency, accountability, accessibility, and opportunities for effective advocacy and participation. Both classical and modern authors who have weighed in on these issues will be discussed. Normally offered alternate years.

Type:
Social Science, BSJ SOCIAL SCIENCE

• **GVT-472 East Germany and the Cold War**

  Prerequisites:
  
  Junior Status required
  
  Credits:
  
  4.00
  
  Description:
  
  When the German Democratic Republic was founded in 1949, observers in the West viewed it as an artificial construct created to serve the needs of the Soviet empire. The self-image of the GDR as created by its leadership revolved around the idea of an anti-fascist German state designed as a bulwark against any revival of National Socialism. Over a generation after the fall of the Berlin Wall, it is possible to undertake a dispassionate analysis of the forty-year history of the ?other? German state as manifested in its cultural identity and political role during the Cold War.
  
  Type:
  
  Social Science

• **GVT-473 American Political Thought**

  Prerequisites:
  
  open to juniors and seniors only
  
  Credits:
  
  4.00
  
  Description:
  
  Reading and discussion of original works by significant American political thinkers. Readings vary, but might include The Federalist and works by Paine, Jefferson, Calhoun, Thoreau, Sumner, Reed, Dewey, Lippman,
Goodman, King, Malcolm X, Carmichael, Hamilton, Friedan and Dillinger. Offered every year.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **GVT-475 Radical & Revolutionary Political Thought**

  Prerequisites:

  Open to Juniors and Seniors only.

  Credits:

  4.00

  Description:

  This course focuses on those political thinkers, such as socialists, feminists, anarchists, pacifists, and ecologists, who have opposed established order and sought to change it. Topics covered include utopian visions (e.g., Owen, Morris, Bellamy, Gilman), criticism of existing institutions (Wollstonecraft, Marx, Fanon, de Beauvoir) and strategies for change (Goldman, Malcolm, Lenin, Cabral). The emphasis is on reading original theoretical works, with several writings assignments. Normally offered every third year.

- GVT-501 Senior Seminar

Prerequisites:
Senior status

Credits:
1.00

Description:
This course is designed to provide all Government degree-seeking students with a team-taught capstone experience. In this course, we will collectively discuss and consider career, professional and academic experience for the Government major, including learning more about the fields of public policy, public service, law, nonprofit management, international development, and nongovernmental organization management. This course focuses on career entry and transition, networking for career success, impression management concept and skills, and related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. Pre-requisite: Senior standing.

Type:
Social Science

- GVT-503 Washington Academic Seminar I

Prerequisites:
Instructor permission required

Credits:
4.00

Description:
An intensive off-campus experience, normally of two-week's duration, arranged through The Washington Center in Washington, D.C. Topics vary. Students will be graded by both an on-site evaluator and an assigned Government Department faculty member. In addition, students are normally required to meet three times during the semester of registration, keep a journal of the off-campus experience and to write a significant research paper based on the topic of the academic seminar.

Type:
Social Science, Expanded Classroom Requirement

- GVT-505 Washington Seminar on National Security

  Prerequisites:
  Instructor's consent required

  Credits:
  4.00

  Description:
  A two-week intensive seminar in Washington DC; the first week will focus on a look inside the defense and intelligence community in the US government; the second week will examine issues, threats, and challenges in global society. The seminar, carried out in partnership with The Washington Center for Internships and Academic Seminars, will include briefing sessions with security officials, site visits, small group meetings, keeping a journal, and academic papers. There will also be some further academic work after you return to Suffolk. Prerequisites: Registration in this course requires advance application. The seminar is offered in May, and applications are due by March 1. Interested students should consult the instructor for further details.

  Type:
  Social Science

- GVT-506 Political Convention Program

  Prerequisites:
  Instructor permission required

  Credits:
  4.00

  Description:
  An opportunity to do an internship through The Washington Center at either the Republican National Convention or the Democratic National Convention. Students will learn what goes on behind the scenes and interact with important public figures influential in setting public policy at various levels of government. The week prior to the convention is spent in Washington, D.C. studying the electoral process, becoming familiar with conventions operations and preparing for convention fieldwork assignments. Students will hear from a wide variety of speakers, including members of the media, party officials, and other political personalities. Students are then assigned as volunteers to assist with the work of the convention during the second week.
• GVT-507 GVT Study Trip

Prerequisites:

INSTRUCTOR'S PERMISSION This course fulfills the Expanded Classroom Requirement

Credits:

4.00

Description:

APPROVAL OF DEPT. CHAIRPERSON. Specially arranged study trip to a foreign country for the purpose of obtaining knowledge through direct experience and observation. Includes prearranged site visits, meetings, required reading and written assignments. ECR

Type:

Social Science, Expanded Classroom Requirement

• GVT-509 United Nations Seminar

Prerequisites:

Instructor's consent

Credits:

4.00

Description:

This course provides an introduction to the study of the role of the United Nations System in the globalization era. The course is divided in two main sections. The first is based on a series of readings, lectures and discussion on the rules, principles and norms which govern the relationship among states and the UN system; it also covers traditional topics such as the sources and subjects of international law, the jurisdiction of states, the peaceful settlement of disputes, the use of force and the legal personality of international actors, human rights, humanitarian intervention, global environment, used of armed forces, as well as economic relations. The second part of the course is based on a required study trip to the UN headquarters in order to experience a direct contact with policy-makers within the UN system in a diversity of areas such as security, aid and peacekeeping areas.

Type:

Social Science, Expanded Classroom Requirement, Global Engagement Experience

• GVT-510 Independent Study

Prerequisites:
Instructor's consent required

Credits:

1.00- 4.00

Description:

Individual program of reading and research on an approved topic under the supervision of a member of the department. Only for qualified juniors or seniors. Offered every semester.

Type:

Social Science

- **GVT-513 The Presidency, Congress & Media**

  Prerequisites:

  Junior status or above

  Credits:

  4.00

  Description:

  This course is fast-paced, highly interactive, multi-media and thought provoking. We apply the traditional academic requirements at The Washington Center, while adding the unique elements that allow you to connect with students at other universities. This course offers interesting guests, lively discussions, thoughtful debates, historic video from C-SPAN and the National Archives. As we examine and analyze the political, legislative and social issues facing our country, we will take an in-depth look at the issues and events shaping the agenda for next Congress & the next round of elections. Our focus will also include the historical process of public policy making, as well as an intense examination on the changing role of media, especially social media, in shaping public opinion.

  Type:

  Social Science

- **GVT-515 Senior Seminar**

  Credits:

  1.00

  Description:

  This course is designed to provide all Government degree-seeking students with a team-taught capstone experience. In this course, we will collectively discuss and consider career, professional and academic experience for the Government major, including learning more about the fields of public policy, public service, law, nonprofit management, international development, and nongovernmental organization management. This course focuses on career entry and transition, networking for career success, impression management concept and skills, and
related life-long learning skills. Students articulate and reflect on academic, work, and co-curricular experiences
from the perspective of professionals entering or advancing their careers. Pre-requisite: Senior standing.

Type:
Social Science

• GVT-521 Internship in Government

Prerequisites:
Government major, sophomore status. Applications to participate must be approved by the Instructor. It is the
responsibility of students to arrange internship placements in advance of the course.

Credits:
4.00

Description:
This course is designed to enhance the academic learning students achieve in a substantive government, politics,
issue advocacy, public policy or public administration related, supervised, internship that is concurrent with the
seminar. Students will use their experiences in the internship of their choosing as a basis for reflection, analysis,
type of skills and career development. Individual learning goals and objectives will be formulated for each student, based
on their placement, interest and career goals. Internships must be a minimum of 120 hours in total and approved
by the instructor in advance.

Type:
Social Science, Expanded Classroom Requirement

• GVT-523 Washington Internship

Prerequisites:
Sophomore standing and instructor's permission required

Credits:
12.00

Description:
A full-time, one-semester internship in Washington, D.C. Consult the Department office for more details. ECR

Type:
Social Science, Expanded Classroom Requirement

• GVT-524 Washington Internship-Summer

Prerequisites:
Sophomore standing and Instructor’s permission required

Credits:
8.00

Description:
A full-time summer internship in Washington D.C. Consult the Department for more details. ECR

Type:
Social Science, Expanded Classroom Requirement

- **GVT-525 Washington Internship Seminar**

  Prerequisites:
  Concurrent enrollment in GVT 523 or GVT 524; sophomore standing; Instructor permission.

  Credits:
  4.00

  Description:
  ECR

  Type:
  Social Science, Expanded Classroom Requirement

- **GVT-526 International Internship-London**

  Prerequisites:
  Junior standing; GVT 528 & GVT 529 Concurrent; Instructor permission.

  Credits:
  8.00

  Description:
  A full-time, one-semester International Internship in London. Students must also complete academic work designed to enhance experiential learning and professional development in their internship abroad that is supervised by a Suffolk instructor. Course work will include developing individualized learning goals and objectives for their internships, journaling, mid-term self-evaluation and a final research paper.

  Type:
  Social Science, Expanded Classroom Requirement
• GVT-527 International Internship-Brussels

Prerequisites:
Junior standing; GVT 528 & GVT 529 Concurrent; Instructor permission

Credits:
8.00

Description:
A full-time, one-semester International Internship in Brussels. Students must also complete academic work designed to enhance experiential learning and professional development in their internship abroad that is supervised by a Suffolk instructor. Course work will include developing individualized learning goals and objectives for their internships, journaling, mid-term self-evaluation and a final research paper.

Type:
Social Science, Expanded Classroom Requirement

• GVT-528 International Seminar I

Prerequisites:
Concurrently with GVT 526 or GVT 530 and GVT 529

Credits:
4.00- 8.00

Description:
One of two required seminars to be taken by International interns and service learning participation. ECR

Type:
Social Science, Expanded Classroom Requirement

• GVT-529 International Seminar II

Prerequisites:
Concurrently with GVT 526 or GVT 530 and GVT 528

Credits:
4.00- 8.00

Description:
One of two required seminars to be taken by International interns and service learning participation ECR
- **GVT-533 International Internship-Edinburgh**

  **Prerequisites:**
  Junior standing; GVT 528 & GVT 529 Concurrent; Instructor permission

  **Credits:**
  8.00

  **Description:**
  A full-time, one-semester International Internship in Edinburgh. Student must also complete academic work designed to enhance experiential learning and professional development in their internship abroad that is supervised by a Suffolk instructor. Course work will include developing individualized learning goals and objectives for their internships, journaling, mid-term self-evaluation and a final research paper.

- **GVT-538 Summer Campaign Lab**

  **Prerequisites:**
  At least 54 credits

  **Credits:**
  3.00

  **Description:**
  This two-week, intensive class will combine in-depth training on building and running a successful campaign, with site visits to leading political strategy and non-profit agencies. Students will broaden their network meeting leaders in government, public policy, and non-profits by participating in evening speaker series and networking events. Evening teamwork will culminate in a final campaign plan to be presented on the final day of the program.

- **GVT-555 Senior Thesis**

  **Prerequisites:**
  Instructor's consent required

  **Credits:**
  4.00
Description:

Individual program of reading, research, writing on an approved topic under the supervision of a member of the department, for students in all tracks who meet the criteria for departmental honors and who wish to prepare a thesis for submission to the honors committee. Must be taken in the first semester of the senior year. Prerequisites: Grade point average 3.0 overall, 3.4 in major; completion of a minimum of 6 credits in Government at Suffolk University; advisor's signed consent; application approved by honors committee in spring of applicant's junior year. 1 term - 4 credits. Normally offered every fall.

2016-2017 Archived Catalog Information

Graphic Design

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Graphic Design Minor Requirements
- Certificate Program
- Gainful Employment Disclosure
- Graphic Design Courses

Major Requirements: 27 courses, 84-85 credits

Courses numbered 200 and above have as a prerequisite the completion of the Foundation Studies program or its equivalent. Exceptions may be made only with the permission of the instructor and the Graphic Design program director.

The letter “S” preceding the course number indicates a studio course. A studio fee is assessed for all studio courses.

In addition to the required courses listed below all BFA candidates must participate in all portfolio reviews and exhibit work in the Graphic Design Student Exhibition.

For a specific sequence of courses, contact your advisor or the department.

Core Requirements (24 courses, 75-76 credits)

- ADF-S101 Foundation Drawing I

  Credits:
  
  3.00

  Description:

  This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

  Term:

  Offered Both Fall and Spring
- **ADF-S102 Foundation Drawing II**

  **Prerequisites:**

  ADF S101

  **Credits:**

  3.00

  **Description:**

  This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

  **Term:**

  Offered Both Fall and Spring

- **ADF-S152 3-Dimensional Design**

  **Prerequisites:**

  ADF S151 or ADF S166

  **Credits:**

  3.00

  **Description:**

  This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

  **Term:**

  Offered Both Fall and Spring

- **ADF-S156 Imaging**

  **Prerequisites:**
Digital visual image generation and modification, especially when combined with traditional hand techniques, are essential skills for artists and designers of the 21st century. This course introduces techniques of image capture, manipulation and output. Weekly and longer-length assignments will address creative and innovative idea generation using these approaches.

Term:

Offered Both Fall and Spring

- **ADF-S166 2D/Color**

  Credits:
  3.00

  Description:

  This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

  Type:

  Arts Admin Minor Elective

- **ADF-S171 CI: Integrated Studio 1**

  Credits:
  3.00

  Description:

  This cross-disciplinary course will integrate the ideas and practices of two-dimensional design, color and drawing emphasis will be placed on understanding the creative process, exploring concepts and developing research skills. Students will undertake individual and collaborative projects in three spaces; the studio classroom, the digital world and the city at large.

  Type:

  Creativity and Innovation, Arts Admin Minor Elective
• ADF-S172 CI: Integrated Studio II

Prerequisites:

ADF S101

Credits:

3.00

Description:

This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media—including video/sound capture and editing—as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

Type:

Creativity and Innovation

• ADG-S201 Basic Typography

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.

Term:

Offered Fall Term

• ADG-S202 Computer Typography

Prerequisites:

ADG S201 and ADG S219

Credits:

3.00

Description:
This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:
Offered Spring Term

- **ADG-S204 Design Beyond Design**

  Credits:
  3.00

  Description:
  This course focuses on the multi-disciplinary nature of the graphic design profession and the designer as a visual communicator, critical thinker and problem solver. Students will be exposed to a series of outside topics to which they will apply design solutions, mirroring the range of fields in which designers today are employed.

- **ADG-S206 Graphic Design I**

  Prerequisites:
  ADF S151 OR ADF S166

  Credits:
  3.00

  Description:
  Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

    Term:
    Offered Fall Term

- **ADG-S207 Graphic Design II**

  Prerequisites:
  ADG S206 and ADG S219

  Credits:
  3.00
Description:
A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.

Term:
Offered Spring Term

• ADG-S213 Web Design I

Prerequisites:
ADG S219

Credits:
3.00

Description:
This course will introduce basic web site design and creation skills to students in order to prepare them for more advanced study in Web Design II. The class will use a variety of industry standard software to design and create basic working websites. Students will learn HTML, XHTML and CSS. Javascript, Flash and Action Scripting will be discussed and presented as supplemental tools. Information architecture, wire frames, interface design, user experience and web page layouts will be explored. The history, societal context and future of new media will be discussed throughout the semester.

• ADG-S214 Illustration for Designers

Prerequisites:
ADF S102

Credits:
3.00

Description:
This course introduces the skills necessary for meeting clients illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Students' development of visual research and photo reference, thumbnailing and rendering skills for a presentation of ideas and concepts while designing the proper environment for their illustration will be required.

Term:
Offered Spring Term

• ADG-S219 Computer Applications in Design
In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Offered Fall Term

- ADG-224 History of Graphic Design

  Credits:

  4.00

  Description:

  The first part of the course will focus on the history of graphic design from prehistoric times to the Industrial Revolution, including the origins of graphic communications in the ancient world, the development of the alphabet and early printing and typography. The second portion will concentrate on the period from the late 19th century to the present, and will include the Arts and Crafts Movement, the various-isms and their influence on modern art, the Bauhaus and International Style, and contemporary visual systems and image making.

  Term:

  Offered Fall Term

  Type:

  Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

- ADG-337 Professional Practice

  Prerequisites:

  Senior BFA status

  Credits:

  3.00

  Description:

  This senior-year course is designed to provide final preparation for employment in the field of graphic design. In addition to helping each student develop a professional portfolio, the course will provide students with practical knowledge of the business aspects of graphic design, interviewing skills, resume preparation, personal branding and help students target internship opportunities for the following semester.
- **ADG-S340 Web Design II**

  **Prerequisites:**
  
  ADG S213 or Instructors permission

  **Credits:**
  
  3.00

  **Description:**
  
  This course is intended as a continuation of the experience gained in Web Design I. The objective of the course is the development of advanced conceptual skills such as prototyping, usability testing, interactive philosophy, accessibility, project and content management. Students will further develop their professional multimedia skills by working with HTML, XHTML, CSS and other industry-standard tools. JavaScript will be discussed and we will use Flash for animation and video. Current techniques for distributions on mobile devices will be explored. Software that will be used during the class will include Dreamweaver, Flash, and other professional level software tools.

- **ADG-S344 Graphic Design III**

  **Prerequisites:**
  
  ADG S202, ADG S207, and ADG S219

  **Credits:**
  
  3.00

  **Description:**
  
  This continuation of Graphic Design I and II (ADG S206, 207) will concentrate on increasing sophistication in creative problem-solving abilities. Students will also develop an understanding of prepress terms and operations and the impact of technology on those operations. It will also provide the knowledge and skills necessary to enable students to make appropriate prepress decisions regarding more complex projects. Senior status preferred.

  **Term:**
  
  Offered Fall Term

- **ADG-S345 Graphic Design IV**

  **Prerequisites:**
  
  ADG S344

  **Credits:**
Description:
A continuation of the concepts and skills developed in Graphic Design III and their application to more complex, multi-pieced, in-depth projects.

Term:
Offered Spring Term

- **ADG-S354 Advanced Computer Applications**
  
  **Prerequisites:**
  ADG S201, ADG S206, and ADG S219
  
  **Credits:**
  3.00
  
  **Description:**
  This course is designed to further explore software applications for specific and experimental effects. It aims to provide students with the knowledge and skills necessary to choose the appropriate software application and to execute the desired design, focusing on the design itself rather than on the limitations of computer programs. The course also focuses on solving the technical and production problems when preparing artwork electronically for printing. Software applications include Adobe Creative Suite: InDesign, Illustrator, and Photoshop.
  
  Term:
  Offered Spring Term

- **ARH-101 Art History I**
  
  **Credits:**
  4.00
  
  **Description:**
  Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.
  
  Term:
  Offered Both Fall and Spring
  
  **Type:**
  Humanities Literature Requirement, Vis. & Perform Thry & Hst
• ARH-102 Art History II

  Credits:
  4.00

  Description:
  Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

  Term:
  Offered Both Fall and Spring

  Type:
  Humanities Literature Requirement, Vis. & Perform Thry & Hst

Choose one of the following:

• ADG-400 Graphic Design Internship

  Prerequisites:
  Senior BFA status.

  Credits:
  3.00- 4.00

  Description:
  Seniors are required to pursue an internship with a local graphic design firm, whose work is directly related to that students intended area of professional concentration. Interns will observe and participate in all office procedures permitted by their place of internship and will be required to maintain a notebook of their observations. Required classroom seminars will reinforce new skills, share learning experiences and answer questions or concerns.

  Term:
  Offered Spring Term

  Type:
  Expanded Classroom Requirement

• ADG-S410 Thesis Studio

  Prerequisites:
Senior BFA standing required.

Credits:
3.00

Description:
The Thesis Studio involves the application of previously learned studio skills in a detailed investigation of a design project relating to the student's intended professional area of specialization. Normally offered spring semester.

Choose an Art History course

Studio Electives (3 courses, 9 credits)

These electives are subject to change and must be approved by the Graphic Design program director. Choose three of the following:

1. ADG-S302 Italian Journal: Painting and Drawing On Paper

   Prerequisites:
   Instructors Consent

   Credits:
   3.00

   Description:
   This faculty-led study abroad course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to context. Florence, Italy and its environs will serve as the subject matter and catalyst in developing the ability to draw objects, i.e. Architecture, people and landscape while advancing a personal style. Study will begin with a pre-departure journal/book binding workshop at Suffolk University and then to the outdoors in and around Florence, Italy, Tuscan hill towns and the Veneto, where students will explore basic illustration styles, methods and techniques.

   Term:
   Summer

   Type:
   Expanded Classroom Requirement, Global Engagement Experience

2. ADG-S305 Conceptual Typography

   Prerequisites:
   Take ADG-S202

   Credits:
Description:

This course is designed to build on core typography knowledge and further students' understanding of the conceptual possibilities of using type in design. Advanced typographic problems requiring the implementation of both traditional and alternative methods will facilitate a deeper exploration of modern communication issues including layered hierarchies, type in motion, typographic voice and illustration.

- ADG-S311 Integrated Advertising
  Prerequisites:
  ADG S206 and ADG S219
  Credits:
  3.00
  Description:
  This course will provide instruction towards creatively translating marketing needs into innovative and effective advertising solutions through a series of challenging projects. Students will learn skills applicable to the advertising industry by focusing on creative executions across multiple-media applications including print, direct mail, collateral, outdoor, online, and other media. There will be emphases on idea generation and campaign development with the goal of message communication through the balance of various elements including page design, copywriting, typography, illustration, photography, and visual effects. The history of advertising from the early 20th century to the ever-changing complexity of today's digital landscape will be studied.

  Term:
  Occasional

- ADG-S312 Packaging Design
  Prerequisites:
  ADG S201 or ADG S601 AND ADG S206 or ADG S606 AND ADG S219 or ADG S619 OR Instructor Permission.
  Credits:
  3.00
  Description:
  In this course, students will study the evolution and history of packaging design, discuss philosophies, learn industry terminology and examine contemporary designs. Using case studies, students will analyze the package design process from concept to production and over the course of the semester, develop a line of packaging and supporting marketing materials for one brand. Guest lectures and field trips will supplement readings and in-class discussions, which will address brand extension and consistency, packaging templates, professional procedures, product photography and printing.

  Term:
• ADG-S316 Interactive Project Development

Prerequisites:
ADG S340 or Instructor's consent.

Credits:
3.00

Description:
This course will allow students to take the skills learned in Web I, Web II and Advanced Topics, and apply them to the kinds of projects they'll see in a professional setting. The class will focus on challenging students to develop a holistic understanding of how the code they write affects their designs, and vice versa, and to think about how all aspects of building a website affect the final user experience. There will also be a strong emphasis on expanding student digital portfolios, with numerous projects based on actual client requests, fully mobile-friendly responsive sites, group projects and more. Students will learn related skills like server management, search engine optimization and how to work as part of a team. This class is intended to prepare students who plan to enter the web and interactive fields upon graduation.

Term:
Occasional

• ADG-S330 Motion Graphics

Prerequisites:
ADG S219 OR instructor approval

Credits:
3.00

Description:
Enter the world of motion design and learn how to make movies that incorporate image, type and video. This class will focus on learning to create moving graphics that are geared toward being broadcast on television, web or film. Students will create time-based works such as title sequences, ads, and videos that they art direct. In the very near future, motion design will be a necessary skill for designers to compete in the marketplace. Motion design can be applied to many areas of graphic design from on-screen presentation to environmental design. During the class, students will build their motion design portfolio that will give them an edge above conventional print and web designers.

Term:
Offered Spring Term

• ADG-S334 Publication Design
**Prerequisites:**
ADG S202 and ADG S207 and ADG S219 or Instructor's Consent.

**Credits:**
3.00

**Description:**
This course will focus on the skills necessary to create publications such as books, magazines, annual reports and catalogs. The goals of this course are three-fold: to further enhance the understanding of typography in regard to publications, to provide the skills and knowledge necessary to design publications for either a print or digital environment, and to integrate the students' own art and/or photography in their work.

**Term:**
Offered Fall Term

- **ADG-S343 Advanced Topics in Interactive Design**

  **Prerequisites:**
  ADG-S340;

  **Credits:**
  3.00

  **Description:**
  This course is designed to follow Web II (ADG S340/ADG S740) and will prepare students for the real-world experiences designers often encounter in the field of interactive media. Students will continue their exploration of interactive design and choose a final project direction that furthers their understanding of interactive media. These topics include designing for and implementing Content Management Systems, designing and production for mobile computing platform uses, cross platform compatibility and concepts of information architecture, and designing with an emphasis on market needs for multimedia.

  **Term:**
  Occasional

- **ADG-S360 Corporate Design**

  **Prerequisites:**
  ADG S202 and ADG S207

  **Credits:**
  3.00

  **Description:**
This course explores the issues of contemporary branding used to identify, establish and promote the business community. Specific emphasis will be placed on the analysis and development of corporate identity systems including the development of logotypes, stationery, signage systems, marketing collateral/advertising/direct mail campaign development, environmental graphics and websites.

Term:
Occasional

- **ADG-S365 Digital Photography**

  Credits:
  3.00

  Description:

  This course offers students the experience of creating digital and film photographs while studying concepts of art direction and techniques that can enhance their compositions. The primary objective is to generate professional still and motion images for digital media, including the Web. Students will manipulate their photographic images using Photoshop rather than the traditional darkroom. Students will also learn how to photograph their own artwork and use a digital camera. Advanced students will be encouraged to explore independent tracks of study.

  Term:
  Occasional

- **ADG-S366 Environmental Graphic Design**

  Prerequisites:
  ADG S202, ADG S207 and ADG S219

  Credits:
  3.00

  Description:

  A cross disciplinary course bringing together interior design students and graphic design students to collaborate on problem solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three dimensional graphic design projects within the built environment.

  Term:
  Occasional

- **ADG-S370 Artists' Books**
Prerequisites:

Take ADG-S201 ADG-S206 or Instructor's permission.

Credits:

3.00

Description:

This course will cover traditional book design and construction techniques, as well as contemporary, non-traditional methods. Students will learn to blend design, craftsmanship and content to create books that are themselves works of art. This is a hands-on studio course.

Term:

Occasional

• ADFA-S251 Printmaking Studio

Credits:

3.00

Description:

This course is designed to familiarize students with the printmaking studio and various techniques. Students will gain exposure to a number of techniques including non-toxic processes. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

Term:

Offered Fall Term

• ADIL-S202 Illustration II: Process & Practice

Prerequisites:

ADIL-S201;

Credits:

3.00

Description:

This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignment each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.
Term:
Offered Spring Term

- **ADIL-S223 Traditional Techniques**

  **Prerequisites:**
  ADF-S166 and ADF-S101

  **Credits:**
  3.00

  **Description:**
  Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:
Offered Fall Term

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Minor Requirements: 6 courses, 18 credits

BFA candidates may not double count major requirements towards the minor.

Course substitutions are permissible per minor advisor consent.

- **ADG-S201 Basic Typography**
  
  **Prerequisites:**
  
  ADF S151 OR ADF S166
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.
  
  **Term:**
  
  Offered Fall Term

- **ADG-S202 Computer Typography**
  
  **Prerequisites:**
ADG S201 and ADG S219

Credits:

3.00

Description:

This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:

Offered Spring Term

• ADG-S206 Graphic Design I

Prerequisites:

ADF S151 OR ADF S166

Credits:

3.00

Description:

Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

Term:

Offered Fall Term

• ADG-S207 Graphic Design II

Prerequisites:

ADG S206 and ADG S219

Credits:

3.00

Description:

A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.
Term: Offered Spring Term

- **ADG-S219 Computer Applications in Design**

  Credits: 3.00

  Description:
  
  In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term: Offered Fall Term

Non-Art & Design majors should choose the following:

- **ADF-S166 2D/Color**

  Credits: 3.00

  Description:
  
  This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists' decisions, affecting the look, meaning and use of visual phenomena.

  Type:

  Arts Admin Minor Elective

Art & Design BFA students should choose one Graphic Design studio course.

Note:

Communication & Journalism majors may substitute CJN-247 for ADG-S219.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a...
major.

- Major Requirements
- Graphic Design Minor Requirements
- Certificate Program
- Gainful Employment Disclosure
- Graphic Design Courses

A short-term, part-time program, the Graphic Design Certificate is appropriate for those who have some prior college-level background and/or significant employment experience in a related field. Please review the curricular requirements as outlined and admission requirements in order to determine whether this program is appropriate for you.

Graphic Design Certificate Program: 12 courses, 36 credits

The Graphic Design Certificate is designed for those who do not want the extensive training of the BFA, but who require more focused design training to complement existing educational or work credentials.

Within the framework of a 12 course (36 credit) sequence, the program provides real-world preparation built on a foundation of design and typography skills, coupled with a thorough grounding in the use of the computer as a design tool. The primary emphasis of all courses, however, remains the conceptual, creative process. The goal of the program is to provide students with the practical and technical design skills necessary to secure entry-level employment in the graphic design field.

The Certificate is designed as a part-time program and can be completed in two or more years (four semesters minimum). Students may choose from day and evening course offerings and may take as many courses per semester as scheduling, prerequisite requirements, and outside commitments allow.

Requirements for Completion of the Graphic Design Certificate Program

- All students must earn a minimum of 36 credits, with a minimum cumulative grade point average of 2.0, in order to be awarded a Certificate in Graphic Design.
- All students must earn a minimum of 27 of the required 36 credits while enrolled as Certificate candidates and must satisfy all course requirements of the Certificate program. A maximum of nine transfer or advanced-standing credits may be applied toward requirements for graduation.
- In addition to the required courses listed below all BFA candidates must participate in all portfolio reviews and exhibit work in the Graphic Design Student Exhibition.
- Please note: credits earned as a NESAD continuing education student are considered transfer credits.
It is recommended that students take no more than five years to complete the program.

Core Requirements: 10 courses, 30 credits

- **ADF-S166 2D/Color**
  
  **Credits:**
  
  3.00
  
  **Description:**

This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.

Term:
Offered Spring Term

- ADG-S206 Graphic Design I

Prerequisites:
ADF S151 OR ADF S166

Credits:
3.00

Description:
Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

Term:
Offered Fall Term

- ADG-S207 Graphic Design II

Prerequisites:
ADG S206 and ADG S219

Credits:
3.00

Description:
A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.

Term:
Offered Spring Term

- ADG-S219 Computer Applications in Design
Description:

In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:

Offered Fall Term

• ADG-337 Professional Practice

Prerequisites:

Senior BFA status

Credits:

3.00

Description:

This senior-year course is designed to provide final preparation for employment in the field of graphic design. In addition to helping each student develop a professional portfolio, the course will provide students with practical knowledge of the business aspects of graphic design, interviewing skills, resume preparation, personal branding and help students target internship opportunities for the following semester.

Term:

Offered Fall Term

• ADG-S344 Graphic Design III

Prerequisites:

ADG S202, ADG S207, and ADG S219

Credits:

3.00

Description:

This continuation of Graphic Design I and II (ADG S206, 207) will concentrate on increasing sophistication in creative problem-solving abilities. Students will also develop an understanding of prepress terms and operations and the impact of technology on those operations. It will also provide the knowledge and skills necessary to enable students to make appropriate prepress decisions regarding more complex projects. Senior status preferred.
Term:
Offered Fall Term

• ADG-S345 Graphic Design IV

Prerequisites:
ADG S344

Credits:
3.00

Description:
A continuation of the concepts and skills developed in Graphic Design III and their application to more complex, multi-piece, in-depth projects.

Term:
Offered Spring Term

• ADG-S354 Advanced Computer Applications

Prerequisites:
ADG S201, ADG S206, and ADG S219

Credits:
3.00

Description:
This course is designed to further explore software applications for specific and experimental effects. It aims to provide students with the knowledge and skills necessary to choose the appropriate software application and to execute the desired design, focusing on the design itself rather than on the limitations of computer programs. The course also focuses on solving the technical and production problems when preparing artwork electronically for printing. Software applications include Adobe Creative Suite: InDesign, Illustrator, and Photoshop.

Term:
Offered Spring Term

Studio Electives (2 courses, 6 credits)

These electives are subject to change and must be approved by the Graphic Design program director. Choose two of the following:

• ADG-S213 Web Design I
Prerequisites:
ADG S219

Credits:
3.00

Description:
This course will introduce basic web site design and creation skills to students in order to prepare them for more advanced study in Web Design II. The class will use a variety of industry standard software to design and create basic working websites. Students will learn HTML, XHTML and CSS. Javascript, Flash and Action Scripting will be discussed and presented as supplemental tools. Information architecture, wire frames, interface design, user experience and web page layouts will be explored. The history, societal context and future of new media will be discussed throughout the semester.

- **ADG-S214 Illustration for Designers**

  Prerequisites:
  ADF S102

  Credits:
  3.00

  Description:
  This course introduces the skills necessary for meeting clients illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Students' development of visual research and photo reference, thumbnailing and rendering skills for a presentation of ideas and concepts while designing the proper environment for their illustration will be required.

  Term:
  Offered Spring Term

- **ADFA-S251 Printmaking Studio**

  Credits:
  3.00

  Description:
  This course is designed to familiarize students with the printmaking studio and various techniques. Students will gain exposure to a number of techniques including non-toxic processes. Over the course of the semester, students will be expected to develop a portfolio of prints while working in class and independently.

  Term:
• ADG-S302 Italian Journal: Painting and Drawing On Paper

Prerequisites:
Instructors Consent

Credits:
3.00

Description:
This faculty-led study abroad course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to context. Florence, Italy and its environs will serve as the subject matter and catalyst in developing the ability to draw objects, i.e. Architecture, people and landscape while advancing a personal style. Study will begin with a pre-departure journal/book binding workshop at Suffolk University and then to the outdoors in and around Florence, Italy, Tuscan hill towns and the Veneto, where students will explore basic illustration styles, methods and techniques.

Term:
Summer

Type:
Expanded Classroom Requirement, Global Engagement Experience

• ADG-S305 Conceptual Typography

Prerequisites:
Take ADG-S202

Credits:
3.00

Description:
This course is designed to build on core typography knowledge and further students' understanding of the conceptual possibilities of using type in design. Advanced typographic problems requiring the implementation of both traditional and alternative methods will facilitate a deeper exploration of modern communication issues including layered hierarchies, type in motion, typographic voice and illustration.

• ADG-S311 Integrated Advertising

Prerequisites:
ADG S206 and ADG S219
Description:

This course will provide instruction towards creatively translating marketing needs into innovative and effective advertising solutions through a series of challenging projects. Students will learn skills applicable to the advertising industry by focusing on creative executions across multiple-media applications including print, direct mail, collateral, outdoor, online, and other media. There will be emphases on idea generation and campaign development with the goal of message communication through the balance of various elements including page design, copywriting, typography, illustration, photography, and visual effects. The history of advertising from the early 20th century to the ever-changing complexity of today’s digital landscape will be studied.

Term:
Occasional

- **ADG-S312 Packaging Design**

  Prerequisites:

  ADG S201 or ADG S601 AND ADG S206 or ADG S606 AND ADG S219 or ADG S619 OR Instructor Permission.

  Credits:

  3.00

  Description:

  In this course, students will study the evolution and history of packaging design, discuss philosophies, learn industry terminology and examine contemporary designs. Using case studies, students will analyze the package design process from concept to production and over the course of the semester, develop a line of packaging and supporting marketing materials for one brand. Guest lectures and field trips will supplement readings and in-class discussions, which will address brand extension and consistency, packaging templates, professional procedures, product photography and printing.

  Term:

  Occasional

- **ADG-S316 Interactive Project Development**

  Prerequisites:

  ADG S340 or Instructor’s consent.

  Credits:

  3.00

  Description:
This course will allow students to take the skills learned in Web I, Web II and Advanced Topics, and apply them to the kinds of projects they'll see in a professional setting. The class will focus on challenging students to develop a holistic understanding of how the code they write affects their designs, and vice versa, and to think about how all aspects of building a website affect the final user experience. There will also be a strong emphasis on expanding student digital portfolios, with numerous projects based on actual client requests, fully mobile-friendly responsive sites, group projects and more. Students will learn related skills like server management, search engine optimization and how to work as part of a team. This class is intended to prepare students who plan to enter the web and interactive fields upon graduation.

Term:
Occasional

- **ADG-S330 Motion Graphics**

  **Prerequisites:**
  ADG S219 OR instructor approval

  **Credits:**
  3.00

  **Description:**
  Enter the world of motion design and learn how to make movies that incorporate image, type and video. This class will focus on learning to create moving graphics that are geared toward being broadcast on television, web or film. Students will create time-based works such as title sequences, ads, and videos that they art direct. In the very near future, motion design will be a necessary skill for designers to compete in the marketplace. Motion design can be applied to many areas of graphic design from on-screen presentation to environmental design. During the class, students will build their motion design portfolio that will give them an edge above conventional print and web designers.

  **Term:**
  Offered Spring Term

- **ADG-S334 Publication Design**

  **Prerequisites:**
  ADG S202 and ADG S207 and ADG S219 or Instructor's Consent.

  **Credits:**
  3.00

  **Description:**
  This course will focus on the skills necessary to create publications such as books, magazines, annual reports and catalogs. The goals of this course are three-fold: to further enhance the understanding of typography in regard to publications, to provide the skills and knowledge necessary to design publications for either a print or digital environment, and to integrate the students' own art and/or photography in their work.
• ADG-S340 Web Design II

Prerequisites:
ADG S213 or Instructors permission

Credits:
3.00

Description:

This course is intended as a continuation of the experience gained in Web Design I. The objective of the course is the development of advanced conceptual skills such as prototyping, usability testing, interactive philosophy, accessibility, project and content management. Students will further develop their professional multimedia skills by working with HTML, XHTML, CSS and other industry-standard tools. JavaScript will be discussed and we will use Flash for animation and video. Current techniques for distributions on mobile devices will be explored. Software that will be used during the class will include Dreamweaver, Flash, and other professional level software tools.

• ADG-S343 Advanced Topics in Interactive Design

Prerequisites:
ADG-S340;

Credits:
3.00

Description:

This course is designed to follow Web II (ADG S340/ADG S740) and will prepare students for the real-world experiences designers often encounter in the field of interactive media. Students will continue their exploration of interactive design and choose a final project direction that furthers their understanding of interactive media. These topics include designing for and implementing Content Management Systems, designing and production for mobile computing platform uses, cross platform compatibility and concepts of information architecture, and designing with an emphasis on market needs for multimedia.

Term:

Occasional

• ADG-S360 Corporate Design

Prerequisites:
ADG S202 and ADG S207
This course explores the issues of contemporary branding used to identify, establish and promote the business community. Specific emphasis will be placed on the analysis and development of corporate identity systems including the development of logotypes, stationery, signage systems, marketing collateral/advertising/direct mail campaign development, environmental graphics and websites.

Term:
Occasional

• **ADG-S365 Digital Photography**

  Credits:
  3.00

  Description:
  This course offers students the experience of creating digital and film photographs while studying concepts of art direction and techniques that can enhance their compositions. The primary objective is to generate professional still and motion images for digital media, including the Web. Students will manipulate their photographic images using Photoshop rather than the traditional darkroom. Students will also learn how to photograph their own artwork and use a digital camera. Advanced students will be encouraged to explore independent tracks of study.

  Term:
  Occasional

• **ADG-S366 Environmental Graphic Design**

  Prerequisites:
  ADG S202, ADG S207 and ADG S219

  Credits:
  3.00

  Description:
  A cross disciplinary course bringing together interior design students and graphic design students to collaborate on problem solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three dimensional graphic design projects within the built environment.

  Term:
• **ADG-S370 Artists' Books**

  Prerequisites:

  Take ADG-S201 ADG-S206 or Instructor's permission.

  Credits:

  3.00

  Description:

  This course will cover traditional book design and construction techniques, as well as contemporary, non-traditional methods. Students will learn to blend design, craftsmanship and content to create books that are themselves works of art. This is a hands-on studio course.

  Term:

  Occasional

• **ADG-400 Graphic Design Internship**

  Prerequisites:

  Senior BFA status.

  Credits:

  3.00- 4.00

  Description:

  Seniors are required to pursue an internship with a local graphic design firm, whose work is directly related to that students intended area of professional concentration. Interns will observe and participate in all office procedures permitted by their place of internship and will be required to maintain a notebook of their observations. Required classroom seminars will reinforce new skills, share learning experiences and answer questions or concerns.

  Offered Spring Term

  Type:

  Expanded Classroom Requirement

- **ADG-500 Graphic Design Directed Study**

  Prerequisites:

  Consent of Program Director required

  Credits:

  3.00

  Description:

  The student completes a directed study project, under the supervision of a graphic design faculty member. All Directed Study request forms must be accompanied by a written proposal and schedule and must be approved by the faculty member, the Graphic Design Program Director, and the department Chair.
• ADG-510 Graphic Design Undergraduate Independent Study
  
  Prerequisites:
  
  An independent study form must be submitted to the CAS Dean's Office.
  
  Credits:
  
  1.00- 6.00
  
  Description:
  
  An Independent Study provides the student with the opportunity to examine an issue of interest that falls outside the parameters of the existing curricula. The student will work on a one-on-one basis with a full-time faculty member to realize a particular and well-defined goal. All proposals for Independent Study must be approved by the Deans Office in advance of the semester during which the work will be completed.

• ADG-S201 Basic Typography
  
  Prerequisites:
  
  ADF S151 OR ADF S166
  
  Credits:
  
  3.00
  
  Description:
  
  This course will introduce students to the creative use of typography in the design process and will provide them with the skills and knowledge necessary to design with type.
  
  Term:
  
  Offered Fall Term

• ADG-S202 Computer Typography
  
  Prerequisites:
  
  ADG S201 and ADG S219
  
  Credits:
  
  3.00
  
  Description:
  
  This advanced course focuses on the translation of the historical knowledge and hand skills learned in Basic Typography into a digital format. Students will learn how to produce quality typography, as well as experiment with and explore letterform design and manipulation.
Term:
Offered Spring Term

- **ADG-S204 Design Beyond Design**
  
  Credits:
  3.00
  
  Description:
  This course focuses on the multi-disciplinary nature of the graphic design profession and the designer as a visual communicator, critical thinker and problem solver. Students will be exposed to a series of outside topics to which they will apply design solutions, mirroring the range of fields in which designers today are employed.

- **ADG-S206 Graphic Design I**
  
  Prerequisites:
  ADF S151 OR ADF S166
  
  Credits:
  3.00
  
  Description:
  Emphasizing the creative process from thumbnail to comprehensive, the course will also introduce the student to the language, tools, and techniques of the professional graphic designer. Attention will be paid to conceptualization, production and presentation in solving design problems. This course will expose students to a series of assignments designed to show step-by-step problem solving from observation and research, to the incorporation of these findings into the design of communication vehicles.

Term:
Offered Fall Term

- **ADG-S207 Graphic Design II**
  
  Prerequisites:
  ADG S206 and ADG S219
  
  Credits:
  3.00
  
  Description:
  A continuation of the skills learned in Graphic Design I, involving projects that are broader in scope, more in-depth, and address societal issues.
• ADG-S213 Web Design I

Prerequisites:
ADG S219

Credits:
3.00

Description:
This course will introduce basic web site design and creation skills to students in order to prepare them for more advanced study in Web Design II. The class will use a variety of industry standard software to design and create basic working websites. Students will learn HTML, XHTML and CSS. Javascript, Flash and Action Scripting will be discussed and presented as supplemental tools. Information architecture, wire frames, interface design, user experience and web page layouts will be explored. The history, societal context and future of new media will be discussed throughout the semester.

• ADG-S214 Illustration for Designers

Prerequisites:
ADF S102

Credits:
3.00

Description:
This course introduces the skills necessary for meeting clients illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Students' development of visual research and photo reference, thumbnailing and rendering skills for a presentation of ideas and concepts while designing the proper environment for their illustration will be required.

Term:
Offered Spring Term

• ADG-S219 Computer Applications in Design

Credits:
3.00

Description:
In this course students will learn the major software applications used by graphic designers, such as Adobe Creative Suite: InDesign, Illustrator, and Photoshop. Through a series of problems, students will learn how and when to use specific software to produce their solutions and prepare portfolio-quality design.

Term:
Offered Fall Term

- **ADG-S250 Graphic Design I-II**

  Prerequisites:
  
  Open to MAGD Accelerated Program Students only.

  Credits:
  
  3.00

  Description:
  
  Emphasizing the creative process from thumbnail to comprehensive, this course will also introduce students to language, tools and techniques of the professional graphic designer. Attention will be paid to the conception, production, and presentation in solving design problems. This course will expose students to a series of exercises designed to show how to get from observation and research, to the incorporation of these findings into the design of communication vehicles (logos, brochures, posters, ads, etc.) on a variety of scales. As a survey of graphic design, the goal of this course is to deal with typical problems faced by graphic designers in their profession.

  This faculty-led study abroad course introduces the skills necessary for meeting clients’ illustration needs in a variety of media appropriate to context. Florence, Italy and its environs will serve as the subject matter and catalyst in developing the ability to draw objects, i.e. Architecture, people and landscape while advancing a personal style. Study will begin with a pre-departure journal/book binding workshop at Suffolk University and then to the outdoors in and around Florence, Italy, Tuscan hill towns and the Veneto, where students will explore basic illustration styles, methods and techniques.

  Term:
  
  Summer
• ADG-S305 Conceptual Typography

Prerequisites:
Take ADG-S202

Credits:
3.00

Description:
This course is designed to build on core typography knowledge and further students' understanding of the conceptual possibilities of using type in design. Advanced typographic problems requiring the implementation of both traditional and alternative methods will facilitate a deeper exploration of modern communication issues including layered hierarchies, type in motion, typographic voice and illustration.

• ADG-S311 Integrated Advertising

Prerequisites:
ADG S206 and ADG S219

Credits:
3.00

Description:
This course will provide instruction towards creatively translating marketing needs into innovative and effective advertising solutions through a series of challenging projects. Students will learn skills applicable to the advertising industry by focusing on creative executions across multiple-media applications including print, direct mail, collateral, outdoor, online, and other media. There will be emphases on idea generation and campaign development with the goal of message communication through the balance of various elements including page design, copywriting, typography, illustration, photography, and visual effects. The history of advertising from the early 20th century to the ever-changing complexity of today's digital landscape will be studied.

Term:
Occasional

• ADG-S312 Packaging Design

Prerequisites:
ADG S201 or ADG S601 AND ADG S206 or ADG S606 AND ADG S219 or ADG S619 OR Instructor Permission.

Credits:
In this course, students will study the evolution and history of packaging design, discuss philosophies, learn industry terminology and examine contemporary designs. Using case studies, students will analyze the package design process from concept to production and over the course of the semester, develop a line of packaging and supporting marketing materials for one brand. Guest lectures and field trips will supplement readings and in-class discussions, which will address brand extension and consistency, packaging templates, professional procedures, product photography and printing.

Term:
Occasional

- **ADG-S316 Interactive Project Development**

  Prerequisites:
  
  ADG S340 or Instructor's consent.

  Credits:
  3.00

  Description:
  
  This course will allow students to take the skills learned in Web I, Web II and Advanced Topics, and apply them to the kinds of projects they'll see in a professional setting. The class will focus on challenging students to develop a holistic understanding of how the code they write affects their designs, and vice versa, and to think about how all aspects of building a website affect the final user experience. There will also be a strong emphasis on expanding student digital portfolios, with numerous projects based on actual client requests, fully mobile-friendly responsive sites, group projects and more. Students will learn related skills like server management, search engine optimization and how to work as part of a team. This class is intended to prepare students who plan to enter the web and interactive fields upon graduation.

  Term:
  Occasional

- **ADG-S328 Designing for the Greater Good**

  Prerequisites:
  
  ADG S207 and ADG S219

  Credits:
  3.00

  Description:
In this class, students will study contemporary models of inspiring change through branding, systems design, and product design, and explore how design can have an impact in raising awareness and funding for social, environmental, political, and health issues. Students will work on three integrated design campaigns projects focused in social innovation, design of community, connected to health, and environmental impact to learn how to identify the opportunities to inspire change through design, and how to leverage print, social media, new fundraising tools, and online resources to create a successful effort. Students will also explore successful case studies in cause-related design.

Term:
Occasional

- **ADG-S330 Motion Graphics**

  Prerequisites:
  
  ADG S219 OR instructor approval

  Credits:
  3.00

  Description:

  Enter the world of motion design and learn how to make movies that incorporate image, type and video. This class will focus on learning to create moving graphics that are geared toward being broadcast on television, web or film. Students will create time-based works such as title sequences, ads, and videos that they art direct. In the very near future, motion design will be a necessary skill for designers to compete in the marketplace. Motion design can be applied to many areas of graphic design from on-screen presentation to environmental design. During the class, students will build their motion design portfolio that will give them an edge above conventional print and web designers.

  Term:
  Offered Spring Term

- **ADG-S334 Publication Design**

  Prerequisites:
  
  ADG S202 and ADG S207 and ADG S219 or Instructor's Consent.

  Credits:
  3.00

  Description:

  This course will focus on the skills necessary to create publications such as books, magazines, annual reports and catalogs. The goals of this course are three-fold: to further enhance the understanding of typography in regard to publications, to provide the skills and knowledge necessary to design publications for either a print or digital environment, and to integrate the students' own art and/or photography in their work.
Term:
Offered Fall Term

- **ADG-S340 Web Design II**
  
  **Prerequisites:**
  ADG S213 or Instructors permission
  
  **Credits:**
  3.00
  
  **Description:**
  This course is intended as a continuation of the experience gained in Web Design I. The objective of the course is the development of advanced conceptual skills such as prototyping, usability testing, interactive philosophy, accessibility, project and content management. Students will further develop their professional multimedia skills by working with HTML, XHTML, CSS and other industry-standard tools. JavaScript will be discussed and we will use Flash for animation and video. Current techniques for distributions on mobile devices will be explored. Software that will be used during the class will include Dreamweaver, Flash, and other professional level software tools.

- **ADG-S343 Advanced Topics in Interactive Design**
  
  **Prerequisites:**
  ADG-S340;
  
  **Credits:**
  3.00
  
  **Description:**
  This course is designed to follow Web II (ADG S340/ADG S740) and will prepare students for the real-world experiences designers often encounter in the field of interactive media. Students will continue their exploration of interactive design and choose a final project direction that furthers their understanding of interactive media. These topics include designing for and implementing Content Management Systems, designing and production for mobile computing platform uses, cross platform compatibility and concepts of information architecture, and designing with an emphasis on market needs for multimedia.

  **Term:**
  Occasional

- **ADG-S344 Graphic Design III**
  
  **Prerequisites:**
  ADG S202, ADG S207, and ADG S219
This continuation of Graphic Design I and II (ADG S206, 207) will concentrate on increasing sophistication in creative problem-solving abilities. Students will also develop an understanding of prepress terms and operations and the impact of technology on those operations. It will also provide the knowledge and skills necessary to enable students to make appropriate prepress decisions regarding more complex projects. Senior status preferred.

Term:
Offered Fall Term

- ADG-S345 Graphic Design IV

  Prerequisites:
  ADG S344

  Credits:
  3.00

  Description:
  A continuation of the concepts and skills developed in Graphic Design III and their application to more complex, multi-pieced, in-depth projects.

  Term:
  Offered Spring Term

- ADG-S354 Advanced Computer Applications

  Prerequisites:
  ADG S201, ADG S206, and ADG S219

  Credits:
  3.00

  Description:
  This course is designed to further explore software applications for specific and experimental effects. It aims to provide students with the knowledge and skills necessary to choose the appropriate software application and to execute the desired design, focusing on the design itself rather than on the limitations of computer programs. The course also focuses on solving the technical and production problems when preparing artwork electronically for printing. Software applications include Adobe Creative Suite: InDesign, Illustrator, and Photoshop.
• **ADG-S360 Corporate Design**
  
  **Description:**
  
  This course explores the issues of contemporary branding used to identify, establish and promote the business community. Specific emphasis will be placed on the analysis and development of corporate identity systems including the development of logotypes, stationery, signage systems, marketing collateral/advertising/direct mail campaign development, environmental graphics and websites.

  **Term:**
  
  Occasional

• **ADG-S365 Digital Photography**

  **Description:**

  This course offers students the experience of creating digital and film photographs while studying concepts of art direction and techniques that can enhance their compositions. The primary objective is to generate professional still and motion images for digital media, including the Web. Students will manipulate their photographic images using Photoshop rather than the traditional darkroom. Students will also learn how to photograph their own artwork and use a digital camera. Advanced students will be encouraged to explore independent tracks of study.

  **Term:**
  
  Occasional

• **ADG-S366 Environmental Graphic Design**

  **Prerequisites:**

  ADG S202, ADG S207 and ADG S219

  **Credits:**

  3.00
A cross disciplinary course bringing together interior design students and graphic design students to collaborate on problem solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three dimensional graphic design projects within the built environment.

Term:
Occasional

- **ADG-S370 Artists' Books**
  
  Prerequisites:
  Take ADG-S201 ADG-S206 or Instructor's permission.
  
  Credits:
  3.00
  
  Description:
  This course will cover traditional book design and construction techniques, as well as contemporary, non-traditional methods. Students will learn to blend design, craftsmanship and content to create books that are themselves works of art. This is a hands-on studio course.
  
  Term:
  Occasional

- **ADG-S410 Thesis Studio**
  
  Prerequisites:
  Senior BFA standing required.
  
  Credits:
  3.00
  
  Description:
  The Thesis Studio involves the application of previously learned studio skills in a detailed investigation of a design project relating to the student's intended professional area of specialization. Normally offered spring semester.

- **ADG-S500 Graphic Design Directed Studio**
  
  Prerequisites:
Consent of Program Director required.

Credits:

1.00- 6.00

Description:

The student completes a directed studio project under the supervision of a graphic design faculty member. All Directed Studio request forms must be accompanied by a written proposal and schedule and must be approved by the faculty member, the Graphic Design Program Director, and the department Chair.

Term:

Offered Both Fall and Spring

- ADG-S510 Graphic Design Independent Study

Prerequisites:

Consent of Program Director required.

Credits:

1.00- 6.00

Description:

In an Independent Studio/Study, the student works in an independent fashion, pursuing an area of study that is outside the scope of existing curricula. Independent Studio/Study courses require CAS Dean's approval in addition to departmental approval.
History & Literature Honors

Students in the History and Literature Honors major explore the extent to which history and literature are interdependent by analyzing historical texts and understanding literature in cultural context. Through this interdisciplinary work, History and Literature majors develop a remarkable ability to synthesize ideas, to question common knowledge, and to shape how cultural events are perceived by the world at large. Students must complete a major in either History or English and a minor in the other field. They may also double major in History and English.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements

Major Requirements: 14-15 courses, 56-60 credits

To be considered for honors in History and Literature, a student must satisfy the following criteria:

1. Prospective majors must seek the approval of the coordinators of the program to undertake this major. Qualifying students must have a 3.5 GPA in the major subject.

2. Students must complete two classes on methodology. These courses also fulfill major and minor requirements in each department:

- HST-200 Gateway to the Past: The Historian's Craft

  Credits:

  4.00

  Description:

  Explores history as an evolving academic discipline, a method of inquiry into the past, and a profession. Students learn historical thinking and research skills that enable them to frame a research question, identify and retrieve required sources, and make an argument about the ideas and actions of past peoples and societies. Required for history majors. Offered annually during Fall term.

  Term:

  Offered Fall Term

  Type:

  Humanities & History, Humanities Literature Requirement
ENG-301 Seminar for English Majors

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
This course seeks to answer the following questions. What is literature? Why do we study literature? What methods aid the study of literature? What are English Studies all about? This course extends reading and writing skills, and provides more specialized terms, knowledge, and approaches to prepare students for study at the junior and senior level. Topics vary from term to term. Student must have completed 80 credits or less Normally offered Fall and Spring semesters.

Term:
Offered Both Fall and Spring

3. The student must complete one honors seminar in English or History. The honors seminar may also fulfill a major or minor requirement.

4. The student must complete an interdisciplinary honors thesis under the joint direction of one professor in History and one professor in English. To write a thesis, the student should register for Independent Study in the major department (ENG-510 or HST-510). Normally, the student should undertake one credit of 510 in the fall semester of the senior year and three credits of 510 in the spring semester of the senior year. Independent Study (510) may fulfill an elective in the major. Any student who completes 510 will receive credit for the course; however, projects completed in 510 must also be approved by the History and English departments to satisfy the requirement for honors.

5. The student must provide an oral defense of the honors thesis, to be evaluated and approved by faculty from both departments.

6. Honors students must finish their coursework in the major and minor with a GPA of 3.5.

7. In special circumstances (such as the case of transfer students), particular exceptions to the requirements above will be considered.

Interdisciplinary Advising in History and Literature

To facilitate this process, and to help the student select appropriate courses in both departments, the student should seek advising as follows:

1. The student should see the coordinators of the program during advising periods to ensure that departmental requirements and honors requirements for the major and minor are being met. The coordinators will also help the student to identify potential thesis advisors and to coordinate interdepartmental aspects of the program such as the oral defense. Finally, the coordinators will guide the student in selecting courses in the department that are particularly interdisciplinary in approach or that are appropriate to the student's focus. For example, a student may be directed to courses in both departments on American history and literature of the 19th century or on women in history and literature.
2. The student must select two thesis advisors, one from History and one from English. These advisors will help the student identify a thesis topic and guide him or her through the writing process, and may also help the student to select courses appropriate to his or her research interests.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Major Requirements: 11 courses, 41 credits

Core Requirements (4 courses, 13 credits)

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

  Prerequisites:

  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

  Credits:

  1.00

  Description:

  This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- **HST-200 Gateway to the Past: The Historian's Craft**

  Credits:

  Offered Spring Term

  Type:
  Humanities & History, Humanities Literature Requirement

- **HST-200 Gateway to the Past: The Historian's Craft**

  **Credits:**
  4.00

  **Description:**

  Explores history as an evolving academic discipline, a method of inquiry into the past, and a profession. Students learn historical thinking and research skills that enable them to frame a research question, identify and retrieve required sources, and make an argument about the ideas and actions of past peoples and societies. Required for history majors. Offered annually during Fall term.
HST-210 Traditional Chinese Society from 1800 to 1949

Credits:
4.00

Description:

HST-216 The Thousand Year Reich: the Holy Roman Empire, 800-1806

Credits:
4.00

Description:
Examines the purposes, ideology, structure, institutions, context, and historical evolution of Europe's most enduring, most important, most influential, and (before the European Union) most inclusive political formation, the Holy Roman Empire, during its thousand-year history from the coronation of Charlemagne in 800 to its dissolution in the Napoleonic Europe of 1806.

HST-218 History of the Mongols

Credits:
4.00

Description:
The history of the Mongol Empire, from the emergence of unified Mongol federation at the beginning of 13th century to its dismemberment into independent territories in Mongolia, China, Transoxiana, Iran, and Kipchak Khanate. We will discuss the topological and geographical features of the Mongolian homeland; and the social, economic, and ideological aspects of their lives. The life and the military and political achievements of Genghis Khan will be highlighted, as well as the Mongols' rule over conquered realms. We will also explore through critical discussions the most important historical approaches to the Mongols.
• HST-234 History of Sports in Boston and the World

Credits:

4.00

Description:

Explore the modern Winter Olympics and the development of athletic events such as the Boston Marathon; as well as the history of basketball (invented in Massachusetts) and baseball and their importance to Boston's history. Examine some of the iconic sports figures of Boston, and the statues and monuments made to them.

Type:

Humanities & History

• HST-235 History of Sport and the Olympic Games

Credits:

4.00

Description:

Explore the History of Boston and around the world through sports, with special focus on American football, association football (soccer) and the World Cup; the development of the NCAA, Title IX and college athletics; the Olympic Games—ancient, revival and modern. Students will also analyze how athletics and athletic events have been commemorated by statues and memorials in and around Boston.

• HST-236 Public History and Cultural Heritage

Credits:

4.00

Description:

Explores the key concepts and current practices of public history as an academic discipline and professional field in museums, libraries, archives, historical societies, historic houses, and preservation organizations. Examines the presentation and interpretation of history to popular audiences through documentaries, motion pictures, Web sites, and other forms of media. Topics covered will include curation, conservation, fundraising, educational and interpretive programming. Students will gain practical experience by participating in substantive, directed projects with partnering organizations.

Type:

Humanities & History

• HST-237 Medieval Iran under the Nomadic Dynasties

Credits:
Description:

Revolutionary changes through three crucial centuries of Iran's history (12th-15th), as Iran withstood two destructive invasions by nomadic leaders, including Genghis Khan and Tamerlane. Examines the social and economic changes Iran experienced, and the rise of Shi'ism and mysticism, which all resulted in the emergence of the Safavid dynasty. A multilateral perspective--political, cultural social, and economic--to conceptualize the different aspects of this important period.

Type:

Asian Studies

- HST-238 Reemergence of Iran and Its Medieval & Early Modern History

Credits:

4.00

Description:

Examines many different aspects of political, social, economic, and cultural history of Iran in the two centuries (1501-1722) of the Safavid dynasty. The Safavids raised Iran's culture and civilization to a high level which had never been in its Islamic period. But the Safavids also traumatized the unity of the Islamic world, preventing the Ottomans from prosecuting their military victories over the western world.

- HST-244 History of the Iranian Islamic Revolution

Credits:

4.00

Description:

Reviews modern Iranian politics with a special attention on the history of the Islamic Revolution of 1979; evaluates the factors which caused the revolution and its impacts on Iranian society, the Middle East, and the world. Among the important topics of discussion will be the role of the United States in Iranian politics (1953-1979); the policies of Mohammad Reza Shah Pahlavi (1941-1979); the hostage crisis (1979-1981); the Iran-Iraq War (1980-1988); the Reform Movement (1997-2005); and the re-emergence of radical policies under Ahmadinejad since 2005.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, Cultural Diversity Opt B

- HST-246 History of Modern Iran

Credits:
Examines the contemporary history of Persia (Iran) from the time of its independence in the beginning of the sixteenth century to the present with special concentration on geographical/historical background; social structure, ethnic, religious, and linguistic diversities; Safavid and Qajar dynasties; Anglo-Russian interventions and occupations; constitutional revolution and reform; centralization, secularization and modernization under Pahlavi dynasty; opposition to westernization and Islamic revolution.

Type:
Humanities & History, Diverse Perspectives

- **HST-247 History of Modern Middle East**

  Credits:
  4.00

  Description:

  Explores the broad historical forces, conflicts and major events that have shaped the contemporary nations of the modern Middle East. Topic include: the emergence of the modern Middle East from the empires of the sixteenth and seventeenth centuries; the age of colonialism; the rise of nationalism; socialism, capitalism; the impact of Israeli and Palestinian conflict on the region; oil, the Islamic Revolution in Iran and the rise of Islamic fundamentalist movements; U.S. policy; and Saddam Hussein's Iraq.

  Term:
  Offered Fall Term

  Type:
  Humanities & History, Cultural Diversity Opt B, Humanities Literature Requirement, BSBA SOCIAL CHANGE

- **HST-248 Peaceful Coexistence: Muslims, Christians, and Jews in Medieval Iberia**

  Credits:
  4.00

  Description:

  Surveys Muslim and Christian occupied territories on the Iberian Peninsula (modern-day Spain and Portugal), focusing on principal events and broad trends, 711-1492. Special emphasis will be placed on tolerance as manifested in the toleration of religious minorities, cultural and scientific interaction, translation and peaceful coexistence convivencia); and on intolerance as manifested through warfare (jihad, crusade), frontier mentality, massacres, forced conversions, the setting up of the Inquisition and the final expulsion of the Jews in 1492 and of the descendants of the converted Muslims or moriscos in 1609 and 1814.

  Type:
- **HST-251 Modern East Asia**

  Credits:

  4.00

  Description:

  China, Japan, and Korea - East Asia's critical players - share many historical influences, but each has a distinct culture, and they competed with each other for much of the twentieth century, proud of their achievements but feeling threatened by their neighbors. Lectures interspersed with movies and documentaries to show how East Asia has developed in the past one-hundred-plus years.

  Type:

  Humanities & History, Diverse Perspectives

- **HST-255 Films and Contemporary China**

  Credits:

  4.00

  Description:

  Uses a series of films to demonstrate the changes in people's lives in contemporary China. It focuses on the Reform Era between 1980 and present. The topics include Chinese politics, economic growth, social change, and popular cultures.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt B, Humanities & History, Asian Studies, Humanities Literature Requirement

- **HST-256 Exploring Asia**

  Credits:

  4.00

  Description:

  In this course each student will select a topic about Asia that they wish to study. Virtually any topic, to be approved by the professor, is acceptable. The goal will be to write a five to seven page paper about that topic by the end of the course. As a class, we will work together through each step of the process of defining a topic, gathering materials about it, and organizing and reporting the final paper.
HST-260 Asian Peoples and Cultures

Credits:
4.00

Description:
Introduces the peoples of Asia and the cultures they have created. Particular attention is paid to the lives of the common people in both historical and contemporary times. By understanding the richness and complexities of daily life in Asia, we will understand the continuities and discontinuities brought on by social, cultural, and economic changes. We will gain an appreciation of our fellow human beings in Asia.

Type:
Humanities & History

HST-261 African History to 1800

Credits:
4.00

Description:
Explores the history of Africa from prehistoric times to the nineteenth century to give students an introduction to African Studies and a sense of Africa's place in world history. Topics include: the Nile Valley civilizations, West African empires, the trans-Saharan trade, the slave trade, the spread and impact of Islam.

Term:
Offered Fall Term

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

HST-262 Modern African History Since 1800

Credits:
4.00

Description:
Examines the history of Africa from 1800 to the present and enable students to develop an understanding of issues that affect the relationship between modern Africa and the world. Topics include: the African tradition; the impact of Islam and Christianity, abolition of the slave trade, European imperialism and colonialism, African independence movements, African nationalism, Pan Africanism.

Term:
Offered Spring Term
HST-263 Comparative Race Relations

Credits: 4.00

Description:
Compares and analyzes the history of race and politics in South Africa and the United States from the 17th century to the present. Examines how race as a social and ideological construct influenced and informed political conflicts over land, labor, and social relations in the two countries including slavery, segregation, apartheid, and the struggle to create racial democracies.

Term:
Offered Fall Term

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

HST-265 Comparative Slavery

Credits: 4.00

Description:
This lecture-discussion course compares the institution of slavery over time and across space. Beginning with its emergence and articulation in the Ancient World, the institution of slavery was evident on all of the continents and played a dynamic role in defining humanity and in forming social, economic, cultural, and political formations up to the Modern Era. The course examines the institution of slavery in its many manifestations from nomadic societies to sedentary ones, from kinship-based states to territorial-based ones, from tribal societies to advanced civilizations, from pre-capitalist economies to capitalist ones.

Type:
Humanities & History

HST-266 Crime and Punishment in Early Modern Europe: 1500-1800

Credits: 4.00

Description:
Explores crime, law and punishment in Europe in the early modern era (1500-1800). Topics include: the nature of crime in early modern Europe; the purposes and roles of law (criminal, civil, and others); forms of punishment and what law, crime, and punishment tell us about early modern European society.

**Type:**

Humanities & History

- **HST-268 History of the Mediterranean**

Examines the Second World War from political, military and socio-cultural perspectives, connecting experiences of combatants and civilians with issues of total war and shows how global conflict fundamentally altered both the world’s geopolitical contours and the consciousness of those who waged and endured it.
Term:
Occasional

Type:
Humanities & History, Humanities Literature Requirement

• **HST-357 History of Spain I**

  Credits:
  
  4.00

  Description:
  
  Surveys the most transcendental social, cultural, economic and political developments in the history of Spain from the Neolithic to the Early Modern Period. Examines the broad history of the nation and its peoples and placing emphasis on three central themes: diversity within the Iberian Peninsula, the region's social and geo-political structures, and the transformation of the Old Order of the ancient kingdoms into a modern, nation-state. Topics include: the Pre-historical period, Roman Hispania, the Medieval Kingdoms, Islamic Civilization, the Christian Reconquest, the Catholic Monarchy, Imperial Spain under the Habsburgs, and the Crisis of the Spanish Empire in the 17th century.

  Type:

  Humanities & History, Humanities Literature Requirement

• **HST-358 History of Spain II**

  Credits:
  
  4.00

  Description:
  
  Examines the political, economic, and social history of Spain from 1700 to the present. Topics include: the War of Spanish Succession; the Bourbon state; the Enlightenment in Spain; the impact of the French Revolution; Spain in the Napoleonic Wars; the rise of liberalism, socialism, and anarchism; the crisis of 1898; the problems of modernization; the Spanish Civil War and the Franco regime; the transition from dictatorship to democracy; Spain's international position today.

  Type:

  Humanities & History, Humanities Literature Requirement

• **HST-H359 The Age of Franklin**

  Prerequisites:
  
  Permission of the Instructor required.
Benjamin Franklin (1706-1790) rose from relative poverty and obscurity to become one of the most powerful and successful men of his century. Examines the political, scientific, and literary, and diplomatic cultures of the eighteenth century by focusing on Franklin's life, reading Franklin's Autobiography, and selections from his political, scientific, and satirical writings. This is an Honors-level course.

- HST-360 Native America: From Pre-History to the Trail of Tears

Credits:
4.00

Description:
Examines the native people of North America before and after the European conquest. Native Americans' relations with one another and their reactions to the Europeans; European and Native American perceptions of one another; white Indians and noble savages; resistance and assimilation; the United States and Indian removal.

Term:
Occasional

Type:
Cultural Diversity Opt A, Cultural Diversity Opt B, Humanities & History

- HST-361 Native America 1832 to Present

Credits:
4.00

Description:
Topics will include the Plains Indian Wars; ethnological aspects of Indian tribes; the pitfalls of Indian reform movements; Indian resistance to U.S. assimilation and reservation policies; the Indian New Deal; activism and the American Indian Movement; Indians' future prospects. Cultural Diversity A

Term:
Occasional

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement

- **HST-362 History of Piracy**

  Credits:

  4.00

  Description:

  Explores the historical reality of pirates and piracy, focusing on the Golden Age years of 1650 to 1730, reasons why men (and some women) turned pirate, and why there has existed a continuing fascination with pirates for centuries. Particular emphasis is placed on the interaction between pirates and New England. Students will read primary sources and accounts, secondary sources, and fictional presentations - both books and films - to better understand piracy, why it happened, and why it continues to fascinate.

  Term:

  Offered Spring Term

  Type:

  Humanities & History, Humanities Literature Requirement

- **HST-363 Naval History: U.S.S. Constitution**

  Prerequisites:

  03 Feb 2010 02:57pm Eric A Hatch

  Credits:

  4.00

  Description:

  In 1794 Boston's citizens watched the largest ship built here up to that time come together at the water's edge. Students will explore the 203-year story of Constitution by learning how craftsmen built this massive ship without electric tools; by following her two hundred years of naval service to the nation; by examining life at sea for the 450 sailors and officers who lived on board for voyages lasting several months; and by surveying the ways Americans have adopted Constitution as a national symbol, using her image to adorn decorative as well as utilitarian objects. Meets at the USS CONSTITUTION Museum and the USS CONSTITUTION.

  Type:

  Humanities & History, Humanities Literature Requirement

- **HST-364 History Curating & Exhibiting**
Prerequisites:

Instructor Approval Required

Credits:

4.00

Description:

Explores the opportunities and challenges of presenting and interpreting history through exhibits at public institutions. Examines the role of history curator as traditional keeper of the past and current presenter and communicator of history and the role of history museums/heritage centers as educational institutions for diverse, multiple audiences. Students will learn how to evaluate objects and other materials to create an historical narrative. Students will experience how to research, design, plan, fund, install, and promote exhibits of historical subjects.

- **HST-368 Boston's Historic Houses**

  Credits:

  4.00

  Description:

  Working with historic houses in Boston, students will learn that art of interpreting history. Using collections, archives, and other repositories, students will research the houses and the people who lived in them. Many of these houses have existed from colonial times and had various uses. Formerly: HST 368 Introduction to Historical Interpretation.

  Term:

  Occasional

  Type:

  Humanities & History, Expanded Classroom Requirement, Humanities Literature Requirement

- **HST-369 American Objects: Materials, Meaning and History**

  Credits:

  4.00

  Description:

  Explores American history through material objects - from colonial silver teapots to 1960s lava lamps. Students will investigate an object's purpose, how it was made and who made it, and interpret the object's cultural meanings for American history. Topics covered will include the decorative arts, vernacular architecture, archaeology, industrial design, ethnicity and gender, visual culture, and landscapes. Lectures and discussions will be complemented with visits to museums, historic houses, and other sites. Students will learn how to research and write about material cultures, placing objects or spaces in their historical context.
• **HST-370 Workers in America**

  **Credits:**
  
  4.00

  **Description:**

  Examines how ordinary Americans shaped and have been shaped by the experience of work in a capitalist economic order. Surveys the world of work and workers, free and unfree, from 1800 to the present. Topics include changing conceptions of work, formation of workers' consciousness and communities, working-class cultures, movements for labor reform, and the impact of race, ethnicity, and gender on labor markets, workplace dynamics, and working-class families and communities. Explores workers' experiences of industrialization and technological innovation, immigration and migration, consumerism and globalization.

  **Term:**

  Occasional

  **Type:**

  Cultural Diversity Opt A, Humanities & History

• **HST-371 U.S. Women's History Colonial to 1865**

  **Credits:**

  4.00

  **Description:**

  Traces the roles, images and experiences of women in America from colonial times to 1865. Topics include the family, work, religion, education, health care, motherhood, sexuality, social and political activism, legal status, labor activism and popular culture. With attention to ethnicity, race, class, age, region of residence, disability and sexual orientation, the course focuses primarily on the everyday lives of ordinary women.

  **Term:**

  Offered Fall Term

  **Type:**

  Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

• **HST-372 U.S. Women's History: 1865-present**

  **Credits:**
4.00

Description:

Examines the social and cultural history of women in the United States from the close of the Civil War to the present. Using not only gender but also race, ethnicity, class, age, disability, region of residence, and sexual orientation as important categories of analysis, this course focuses on women's private and public lives. Topics include the family, work, religion, education, health care, private lives, motherhood, sexuality, social and political activism, legal status, labor activism, and popular culture.

Offered Spring Term

Type:

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE, DHST-373 History of Human Rights

• HST-373 History of Human Rights

Credits:

4.00

Description:

Examines the history of human rights from the Enlightenment to the present, including the historical origins of human rights and its evolution over time as well as topics such as slavery, imperialism, women's rights, and genocide.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement

• HST-377 Caribbean and Latin-American Diaspora

Credits:

4.00

Description:

A look at the migration of people, along with their culture, to and from the Caribbean and Latin America. The first half of the course looks at how European, Asian and African diasporas settled in the region, assimilated and contributed to the ethnic and cultural base of Caribbean and Latin America countries in the colonial period. The second half offers insight into how and why people from the Caribbean and Latin America would later form diasporas of their own in countries like the United States in the twentieth century. Students taking this course will get a sense of the struggles, accomplishments and culture of Caribbean and Latin American peoples in the United States. Formerly HST 286.
• HST-381 American Colonial History

Credits:

4.00

Description:

Explores the founding and settlement of North America; the social, economic, and political development of European colonies and their interactions with Native People; the social religious, and cultural world of early America; witchcraft, slavery, and warfare; the British-French struggle for control of the North American continent; and the background and causes of the American Revolution.

Term:

Type:

Humanities & History, Humanities Literature Requirement

• HST-383 Boston: Heritage of a City

Prerequisites:

One History course

Credits:

4.00

Description:

Boston from its foundation in 1630 to its development as a 21st century metropolis. From the Massachusetts Bay Colony, to cradle of the American Revolution, to a Yankee merchant capital, Brahmin cultural center, and immigrant melting pot. When offered in the hybrid format, this course will meet at the regularly-scheduled time, but lectures and other course materials will be available on the course Blackboard site in case you cannot attend.

Term:

Offered Fall Term

Type:

Humanities & History, Expanded Classroom Requirement, Humanities Literature Requirement
• **HST-384 History of Boston and Suffolk University**

  Credits:

  4.00

  Description:

  Numerous walking tours will highlight an overview of Boston's history (its foundation in 1630 as part of the Massachusetts Bay Colony; as cradle of the American Revolution; as a Yankee merchant capital, Brahmin cultural center, and immigrant melting pot; and as a modern metropolis) leading to a consideration of the history of Suffolk University, as product and contributor to Boston history and culture, as well as to its immediate urban neighborhood.

• **HST-389 Creating the Constitution**

  Prerequisites:

  Sophomore Standing Required

  Credits:

  4.00

  Description:

  Investigates the development of American constitutional government, from the political crisis of the 1780s to the Civil War. The problems of individual liberty versus government power; state rights; race and slavery; war powers; pluralism.

  Term:

  Occasional

  Type:

  Humanities & History, Humanities Literature Requirement

• **HST-392 American Civil War and Reconstruction**

  Credits:

  4.00

  Description:

  Examines the biggest war in American History; from the antebellum reform and expansion movements, slavery and the deepening sectional crisis of the 1850s. Analyzes violent war and Reconstruction to 1877.

  Term:

  Occasional
- **HST-394 Slavery in Film, Literature and History**
  
  Credits:  
  4.00
  
  Description:
  
  A seminar on slavery in the United States as depicted in history, literature, and film. Topics may include resistance to slavery, honor, the attack on slavery, the cultural and social worlds of masters and enslaved people, the thought of masters and enslaved people, women and slavery, and/or slavery as an economic institution.

- **HST-395 US History: Race and Ethnicity**
  
  Prerequisites:
  
  Permission of Instructor Required
  
  Credits:  
  4.00
  
  Description:
  
  Explores the history of the United States from perspectives of some of America's racial and ethnic groups. Through readings, writings, and discussions students will examine the history of difference and diversity in the United States.

  Term:  
  Occasional

  Type:

  Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement

- **HST-396 The African Diaspora**
  
  Credits:  
  4.00
  
  Description:
Examines the global dispersion of African people outside of the African continent. The history and culture of African descendant people and their communities in the Americas, Europe, and Asia will be included.

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities & History, Cultural Diversity Opt A

- **HST-407 German History 1517 - 1871**

  Credits:
  4.00

  Description:
  Explores the social, political and cultural development of the German-speaking population of central Europe from the beginning of the Reformation to the proclamation of the Second Reich, with major attention to the Wars of Religion, the emergence of Prussia and its competition with Austria, and the development of German nationalism.

  Term:
  Offered Spring Term

• HST-452 Ancient China Seminar

Credits:
4.00

Description:
Discusses the emergence of early Chinese states, feudalism during Chinese antiquity, the emergence of Confucianism and other competing political ideologies, and the consolidation of the imperial power.

Term:
Occasional
Type:
Humanities & History, Asian Studies

• HST-469 Research Seminar: African American Life in Slavery and Freedom- Reconstruction and the Freedman's Bureau
Credits: 4.00

Description:

Introduces students to the Reconstruction era in American history, and uses Reconstruction as a bridge to look at enslavement, which preceded the era, and the issue of freedom during, and after the era. In the first half of the class students read from texts that will provide them with an understanding of slavery, emancipation and reconstruction. The second half of the class will utilize on-line collections of the Freedman’s Bureau Papers to allow students to use documents to deepen their understanding of the Reconstruction era. The class will also provide a comparative approach by considering questions of citizenship in the 19th century for people of African descent in the United States, Latin America and the Caribbean. This course is identical to BLKST 469.

Term: Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-471 Self, Body, & Sexuality- U.S. History**

Credits: 4.00

Description:

This course examines American debates over the natures, capacities, and responsibilities of men and women from settlement of the New World through the present. Emphasis is given to three elements of the self: social and civic personhood, the body, and sexuality. We will focus on representations of womanhood and masculinity - across racial, ethnic, and class lines - and their effects on men and women in society, politics, and at law. Course readings will also examine concepts of human nature and the interplay among mind, body, and sexuality.

Term: Occasional

Type:

Humanities & History, Humanities Literature Requirement

- **HST-483 Death, Disease, Healing-Us Hst**

Credits: 4.00

Description:
Investigates how Americans have understood and responded to health, illness, and death from the eighteenth century to the present. Examine interactions among patients, healers (orthodox and heterodox), the medical and scientific professions, business, and government. Explore the effects of scientific and technological advancements, industrialization, urbanization, immigration, war, and social movements on the nation's moral and political economies of health, and on evolving ideas about bodily integrity and autonomy, linked to historical relations of gender, race, class, and sexuality.

Type:
Cultural Diversity Opt A, Humanities & History

- HST-484 History of the Emotions

Credits:
4.00

Description:
Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel
toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

Term:
Occasional

Type:

Humanities & History, Humanities Literature Requirement, Cultural Diversity Opt A, Diverse Perspectives

- **HST-489 Germany: Film, Politics, Memory Since 1945**

  Credits:
  4.00

  Description:
  Explores German history since 1945 through film, newsreels and other archival footage, war memorials and museums, novels, published diaries, memoirs, and recent historical scholarship. Topics include the representation, in film and other texts, of: post-war rebuilding; the German Economic Miracle; divided Berlin; 1960s and 70s radical politics; coming to terms since 1945, with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multi-cultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

  Type:
  Humanities & History

- **HST-494 Politics and Protest**

  Credits:
  4.00

  Description:
  Examines the impact of organized reform movements on American history from the 1800s to the twenty first century. In each era presented, students will explore the various dynamics that impact reform.

  Term:
  Occasional

• ENG-123 Great Books of the World I Great Books of World Lit. I

Credits:
4.00

Description:
Literary masterpieces from ancient times to the Renaissance, including: Homer's Odyssey, Sophocles' Oedipus, Virgil's Aeneid, selections from the Hebrew Bible and the Gospels, and Dante's Divine Comedy. List may vary at the discretion of the instructor.

Term:
Offered Fall Term

Type:
Humanities & History, Humanities Literature Requirement, Diverse Perspectives

• ENG-124 Great Books of the World II

Credits:
4.00

Description:
This course will introduce students to a selection of Great Books from around the world from the 17th century to the 21st, such as Don Quixote (Spain), Madame Bovary (France), The Communist Manifesto (Germany), The Origin of Species (England), War and Peace (Russia), On Dreams (Austria), Night (Hungary), Things Fall Apart (Nigeria), Satyagraha (India), I Am Prepared to Die (South Africa), Saeed the Pessoptomist (Israel), The Rouge of the North (China), and The House of Spirits (Chile). Readings may vary at the discretion of the instructor.

Term:
Offered Spring Term

Type:
Humanities & History, Humanities Literature Requirement, Diverse Perspectives

Choose one of the following:

• PHIL-210 History of Ancient & Medieval Philosophy

Credits:
4.00

Description:
The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement

**PHIL-211 History of Modern Philosophy**

Credits:

4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement

Advanced Courses (2 courses, 8 credits)

Choose two Art History or Music History courses at the 200-level or higher.

Note:

- A maximum of two courses taken at other institutions or as part of a study abroad program may apply toward the minor.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Humanities

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Humanities Courses

Students interested in honors should consult with the department chair during the spring semester of their junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 GPA in Humanities courses.

Honors candidates should register for HUM-502 in the fall semester of the senior year. Under the guidance of a faculty member, they will use this course to complete a research paper, which will be evaluated by all the professors in the student’s field of study. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

- HUM-502 Honors Thesis

  Prerequisites:

  Permission of the Department Chair.

  Credits:

  4.00

  Description:

  A major research project completed under the supervision of a regular faculty member.

  Term:

  Occasional

  Type:

  Humanities & History, Humanities Literature Requirement

Illustration

A minor in Illustration provides an introduction to the theory and practice of the discipline. The curriculum is rooted in fundamental principles of visual communication related to picture making, with emphasis on the development of essential technical and conceptual skills. Students are introduced to traditional genres and applications (narrative, editorial, technical, advertising, visual development) in the context of contemporary professional practice.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Illustration Minor Requirements
- Illustration Courses

Minor Requirements: 6 courses, 18 credits

BFA candidates may not double count major requirements towards the minor.

Required for All Students:

- ADIL-S201 Illustration I: Visual Communication

  Prerequisites:
  
  ADF-S101 and ADF-S166 and ADIL-S223 is recommended(previously or concurrently)

  Credits:

  3.00

  Description:

  This course introduces fundamental concepts and principles of visual communication, with emphasis on the expression of ideas and storytelling through pictures. Topics include implied and sequential narrative, theatrical singing, and visual metaphor. Informed by lecture, discussion and examples, students explore these concepts through a series of assignments with defined objectives related to audience and function (description, symbolism, narrative, poetic allusion, etc.) Through preliminary studies and sketches, students are encouraged to explore multiple solutions, carefully considering concept, drawing, composition, and technical approach. Students are encouraged to use media and methods of choice.

  Term:

  Offered Fall Term
Required for Art & Design BFA students:

- **ADIL-S202 Illustration II: Process & Practice**
  
  **Prerequisites:**
  
  ADIL-S201;
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignment each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.
  
  **Term:**
  
  Offered Spring Term

Art & Design BFA students should choose four of the following:

- **ADF-S123 Painting**
  
  **Prerequisites:**
  
  ADF S101, ADF S166
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.
  
  **Term:**
  
  Offered Spring Term

- **ADIL-S223 Traditional Techniques**
Prerequisites:
ADF-S166 and ADF-S101

Credits:
3.00

Description:
Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:
Offered Fall Term

- ADIL-S255 Digital Techniques
  Prerequisites:
  Take ADF-S101 and ADF-S166;
  Credits:
  3.00
  Description:
  Introduction and exploration of applications used for digital drawing, painting, and sculpting, including Adobe Photoshop, Adobe Illustrator, and LightWave 3D modeling software. Similarities, compatibilities, and essential differences between applications are demonstrated. Efficient file management, help menus, online tutorials, scanning, formatting, printing, and presentation procedures are also covered. Assignments are observational (still life, landscape, portrait, and figure) - not invented imagery. Exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.
  Term:
  Offered Spring Term

- ADIL-S301 Illustration III: Style & Substance
  Prerequisites:
  Take ADIL-S202;
  Credits:
3.00

Description:

This course examines the elements of visual style, the relationship between style and meaning, and the role and impact of stylistic trends in contemporary illustration. Students explore aesthetics and factors that contribute to unique and authentic style. Art buyer choices and public tastes are analyzed. Assignments are approached professionally, as art direction, and within a set of parameters, students are encouraged to take advantage of opportunities for creative freedom. Assignments include an interdisciplinary collaborative project and the integration of text with image. Students practice with their preferred media as they develop awareness of elements that contribute to the characteristic look that identifies their work.

Term:

Offered Fall Term

- **ADIL-S305 Figure in Context**

Prerequisites:

ADF-S101 AND ADF-S166(OR ADF-S143 and ADF-S151), and ADF-S102 is recommended.(may be taken concurrently)

Credits:

3.00

Description:

Explores the relationship between the human figure and the environment, providing intensive observational drawing and painting practice as preliminary study and visual reference for spatially and compositionally cohesive narrative imagery. Principles of color theory, light logic, and linear and atmospheric perspective are applied to address both 2-dimensional and 3-dimensional concerns (composition, color and the illusion of volume and spatial depth). With attention to theatrical staging, students arrange pose, drapery, clothing, props, and lighting to express specific narrative and emotional context. Camera and dioramas are used for visual reference and students combine reference materials from various sources. Sculptural models are used to explore human skeletal and muscular anatomy.

Required for Non-Art & Design Majors:

- **ADF-S101 Foundation Drawing I**

Credits:

3.00

Description:

This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.
ADF-S102 Foundation Drawing II

Prerequisites:
ADF S101

Credits:
3.00

Description:
This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

ADF-S166 2D/Color

Credits:
3.00

Description:
This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists’ decisions, affecting the look, meaning and use of visual phenomena.

Type:
Arts Admin Minor Elective

Non-Art & Design Majors should choose two of the following:
• ADF-S123 Painting

Prerequisites:

ADF S101, ADF S166

Credits:

3.00

Description:

In this introductory course, students will learn to accurately perceive relationships of shape, form, color and value, and to translate that information through the medium of paint. In a series of in-class and outside projects on canvas, prepared paper and panel, students will explore various approaches to the use of acrylic and oil paint. Emphasis will be placed on the development of disciplined technical skills as well as the exploration of painting's potential as a medium of communication and creative visual expression.

Camera and dioramas are used for visual reference and students combine reference materials from various sources. Sculptural models are used to explore human skeletal and muscular anatomy.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
A minor in Illustration provides an introduction to the theory and practice of the discipline. The curriculum is rooted in fundamental principles of visual communication related to picture making, with emphasis on the development of essential technical and conceptual skills. Students are introduced to traditional genres and applications (narrative, editorial, technical, advertising, visual development) in the context of contemporary professional practice.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Illustration Minor Requirements
- Illustration Courses

- ADIL-224 History of Illustration
  
  Credits:
  
  4.00
  
  Description:
  
  The study of how images have been used to illustrate ideas, tell stories, convey information and assist in human communication throughout history. Through presentation, lecture, discussion, research, field trips and selected readings, students explore the historical antecedents and significant trends in illustration before the late 20th century. Important illustration markets and applications are emphasized, and notable artists and artworks are presented in the context of the larger culture. The changing role, employment status and professional practices of the commercial artist are discussed. Attention is given to the impact of reproduction and distribution technologies on the evolution Illustration profession and markets for creative content as well as the impact of economics on intellectual property rights.
  
  Term:
  
  Offered Fall Term

- ADIL-338 Illustration Professional Practices
  
  Prerequisites:
  
  ADIL-S301
  
  Credits:
Description:

An introduction to contemporary illustration professional practices within a broad range of specializations and related fields. Students identify personal interests, capabilities, strengths and career priorities and goals that will influence their lives as creative professionals. Contemporary professional issues, marketing and self-promotion are covered in depth. Assignments include logo design and a direct marketing/email promotional piece. Students research professional competitions and organizations as advertising and networking opportunities and identify prospective clients and employers, produce resumes and polish interviewing and presentation skills. Freelance/contractor self-employment issues and entrepreneurial small business practices are thoroughly addressed, including reproduction rights, pricing, licensing, negotiation, contracts, bookkeeping, taxes, insurance and retirement.

• ADIL-400 Illustration Internship

Prerequisites:

Take ADIL-338;

Credits:

3.00

Description:

Illustration Majors may choose to complete an Illustration Internship in substitution for the course Collaboration (ADIL-S402). The Internship is designed to give students experience and exposure to the professional world of illustration or an illustration-related field in order to prepare for employment. Student interns work on a part-time basis, essentially as apprentice employees. Interns maintain a journal of activities and observations. Classroom seminars will provide opportunities for reinforcing new skills, sharing learning experiences and discussing concerns. Before the end of the junior year, students interested in an internship should investigate potential employment directly related to their intended area of professional concentration. All internships must be approved in advance by the Illustration Program Director and should be completed during the senior year or the prior summer semester.

Type:

Expanded Classroom Requirement

• ADIL-S201 Illustration I: Visual Communication

Prerequisites:

ADF-S101 and ADF-S166 and ADIL-S223 is recommended(previously or concurrently)

Credits:

3.00

Description:
This course introduces fundamental concepts and principles of visual communication, with emphasis on the expression of ideas and storytelling through pictures. Topics include implied and sequential narrative, theatrical singing, and visual metaphor. Informed by lecture, discussion and examples, students explore these concepts through a series of assignments with defined objectives related to audience and function (description, symbolism, narrative, poetic allusion, etc.) Through preliminary studies and sketches, students are encouraged to explore multiple solutions, carefully considering concept, drawing, composition, and technical approach. Students are encouraged to use media and methods of choice.

Term:
Offered Fall Term

- **ADIL-S202 Illustration II: Process & Practice**

  Prerequisites:
  ADIL-S201;
  
  Credits:
  3.00

  Description:

  This course expands on concepts introduced in Illustration I, with emphasis on visual problem solving, generation of original ideas, and the process of picture making. Sequenced assignment each address a different set of parameters related to a different target audience, a different illustration genre (editorial, entertainment, institutional, educational, advertising, etc.) Emphasis is placed on the need to preserve spontaneity and authentic vitality in task-based creative work with multiple requirements, time restraints and periodic art direction. Students use traditional or digital media of their choice and are introduced to pre-production, formatting and presentation requirements for effective print and digital reproduction.

  Term:
  Offered Spring Term

- **ADIL-S214 Illustration for Designers**

  Prerequisites:
  ADF S102
  
  Credits:
  3.00

  Description:

  This course introduces the skills necessary for meeting clients' illustration needs in a variety of media appropriate to their context. Emphasis will be placed on developing the ability to draw real objects and real people while advancing a personal style. Development of visual research and photo reference, thumbnailing and rendering skills for ones presentation of ideas and concepts while designing the proper environment for their illustration will be required.
• ADIL-S223 Traditional Techniques

Prerequisites:

ADF-S166 and ADF-S101

Credits:

3.00

Description:

Students explore a variety of wet and dry medias, surfaces, tools and approaches traditionally used for illustration. Assignments involve observational subject matter, including still life, wildlife, urban and natural landscape, portrait and clothed figure. Media are handled expressively or with precision, and preliminary exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Fall Term

• ADIL-S255 Digital Techniques

Prerequisites:

Take ADF-S101 and ADF-S166;

Credits:

3.00

Description:

Introduction and exploration of applications used for digital drawing, painting, and sculpting, including Adobe Photoshop, Adobe Illustrator, and LightWave 3D modeling software. Similarities, compatibilities, and essential differences between applications are demonstrated. Efficient file management, help menus, online tutorials, scanning, formatting, printing, and presentation procedures are also covered. Assignments are observational (still life, landscape, portrait, and figure) - not invented imagery. Exercises provide opportunities for experimentation and practice. Final results are evaluated in terms of technical process and proficiency, readability and reproducibility, and successful application of fundamental principles of design and color theory.

Term:

Offered Spring Term

• ADIL-S270 3D Modeling

Prerequisites:
This course addresses basic digital 3D modeling for film and interactive graphics and animation techniques used in computer animation, game development, visual effects and concept and production art. Students will be prepared for more advanced training in modeling, rigging and animation. Using the basic functions and tools of Mudbox, students will be introduced to the fundamentals of polygon modeling and sculpting. They will explore Maya, using components to make objects and images to create skins and map textures with essential training in rendering, exporting, compositing and file management. Students will design simplified figurative characters posed in simple environments, explore basic rigging and 3D manipulation, use photo manipulation to create complex textures, and implement pan, tracking and simple walking animations.

• **ADIL-S301 Illustration III: Style & Substance**

Prerequisites:

Take ADIL-S202;

Credits:

3.00

Description:

This course examines the elements of visual style, the relationship between style and meaning, and the role and impact of stylistic trends in contemporary illustration. Students explore aesthetics and factors that contribute to unique and authentic style. Art buyer choices and public tastes are analyzed. Assignments are approached professionally, as art direction, and within a set of parameters, students are encouraged to take advantage of opportunities for creative freedom. Assignments include an interdisciplinary collaborative project and the integration of text with image. Students practice with their preferred media as they develop awareness of elements that contribute to the characteristic look that identifies their work.

Term:

Offered Fall Term

• **ADIL-S302 Illustration IV: Originality & Creativity**

Prerequisites:

Take ADIL-S301;

Credits:

3.00

Description:
This course provides an opportunity for students to consolidate the knowledge and experience from the three previous semesters of Illustration to expand their conceptual and technical skills as they strive for a synthesis of concept, process, technique, and style. Students will explore innovative and personal ways to express visual ideas, while focusing on advanced assignments that address a variety of real world applications and genres. Progressing from instructor-defined to student-defined objectives, assignments provide opportunity for students to develop an efficient and dependable ideation process and technical competence in a preferred medium. In the final weeks, students will be asked to develop a draft Studio Project Proposal Outline for the following semester.

Term:
Offered Spring Term

- **ADIL-S305 Figure in Context**

  **Prerequisites:**

  ADF-S101 AND ADF-S166(OR ADF-S143 and ADF-S151), and ADF-S102 is recommended.(may be taken concurrently)

  **Credits:**

  3.00

  **Description:**

  Explores the relationship between the human figure and the environment, providing intensive observational drawing and painting practice as preliminary study and visual reference for spatially and compositionally cohesive narrative imagery. Principles of color theory, light logic, and linear and atmospheric perspective are applied to address both 2-dimensional and 3-dimensional concerns (composition, color and the illusion of volume and spatial depth). With attention to theatrical staging, students arrange pose, drapery, clothing, props, and lighting to express specific narrative and emotional context. Camera and dioramas are used for visual reference and students combine reference materials from various sources. Sculptural models are used to explore human skeletal and muscular anatomy.

- **ADIL-S307 Visual Development**

  **Prerequisites:**

  Take ADIL-S201 and ADIL-S255 or ADG-S219;

  **Credits:**

  3.00

  **Description:**

  This studio elective explores the basic components of the pre-production process for animation, computer games, film and television - concept, character design, properties and assets, backgrounds and environments. Using a given story sequence and working as a team, students will produce everything from plot analysis to storyboards, maquettes, dioramas, background layouts and matte painting. Both aesthetic and technical issues will be addressed, with emphasis on effective process, including research and generation of ideas. Theories of dramatic staging, atmospheric and linear perspective and anatomy of visual storytelling will be reviewed with attention to narrative sequence, point of view, action, transitions and editing. Students will work with a variety of traditional 2D
and 3D media and computer applications for drawing and painting (Photoshop, Painter, SketchUp, Blender, Maya) and be introduced to professional practices and presentation.

- **ADIL-S401 Studio Project**

  Prerequisites:

  Take ADIL-S302;

  Credits:

  3.00

  Description:

  This semester of rigorous intellectual and creative exploration provides opportunity to research a subject of personal interest with social, cultural, scientific or commercial relevance. Students visually communicate ideas and information from their research and analyze and synthesize information and data to produce original visual works for a particular audience. This studio practice has interdisciplinary focus and may be the spark for ideas to be expanded in Illustration Portfolio or Illustration Collaboration courses. Experience and insights are a higher priority than the tangible results. Students carefully document and evaluate their ideas, research activities and results.

  Term:

  Offered Fall Term

- **ADIL-S402 Collaboration**

  Prerequisites:

  ADIL-S302

  Credits:

  3.00

  Description:

  Creative collaboration provides a valuable opportunity for Illustration seniors to work with other artists or designers from any discipline - students or practicing professionals (on a pro bono basis), in partnership or groups - on original interdisciplinary creative projects related to theater (set, lighting and costume design), advertising (ads, packaging, signage and exhibitions), creative writing (publishing), journalism (commentary and reportage), medical or environmental science, biology, public service, or entrepreneurial licensed products. Content must derive from an existing source and all text must be previously published and written by someone other than the student illustrator. Collaborators divide tasks and responsibilities to best advantage.

  Term:

  Offered Spring Term

  Type:
• **ADIL-S410 Portfolio**

  Prerequisites:

  TAKE ADIL-S302;

  Credits:

  3.00

  Description:

  Concentrated studio practice within a student's preferred illustration-related field, genre, market or subject matter, using the preferred media and format and targeting the preferred audience. Projects may involve existing or self-generated content (creative writing, product design, etc.). Students develop a concise project outline and work independently to create a focused body of artwork to be used to obtain employment or freelance work. Progress is discussed in weekly group seminars and individual instructor critiques. Final artwork is reproduced and assembled in a professional quality print portfolio. Students also present the work on a professional web site and may choose to participate in a solo or group exhibition of the original artwork. Each student invites an outside professional (publisher, art director, licensing agent, artist rep., etc.) to evaluate their portfolio for a final Portfolio Review.

  Term:

  Offered Fall Term

• **ADIL-S500 Illustration Directed Studio**

  Prerequisites:

  Instructor's Approval

  Credits:

  3.00

  Description:

  The student completes a directed studio project under the supervision of a full-time Illustration faculty member. Directed Studio request forms must be accompanied by a written proposal with a schedule and must be approved by the instructor, the Illustration Program Director, and the Department Chair.

  Term:

  Offered Both Fall and Spring
2016-2017 Archived Catalog Information

Interior Design

The New England School of Art & Design offers a Bachelor of Fine Arts in Interior Design.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Accelerated Bachelor's/Master's Degree in Interior Architecture
- Interior Design Courses

Major Requirements: 28 courses, 88 credits

Courses numbered 200 and above have as a prerequisite the completion of the Foundation Studies program (with the exception of Foundation Drawing II) or its equivalent. Other exceptions may be made only with the permission of the instructor and the Interior Design program director.

The letter "S" preceding a course number indicates a studio course. A studio fee is assessed for all studio courses.

For specific sequence of courses, contact your advisor or the department.

- ADF-S101 Foundation Drawing I

  Credits:

  3.00

  Description:

  This course concentrates on the traditional techniques of observational drawing. Fundamental principles and elements of drawing are introduced in structured lessons and exercises, which are supplemented by additional outside assignments. Foundation Drawing I stresses the development of visual skills as well as the broad use of drawing concepts, vocabulary, techniques and variety of materials.

  Term:

  Offered Both Fall and Spring

  Type:

  Arts Admin Minor Elective
• ADF-S102 Foundation Drawing II

  Prerequisites:
  ADF S101

  Credits:
  3.00

  Description:
  This course will refine the basic visual skills developed in Foundation Drawing I (ADF S101). The elements of color and mixed media are introduced to expand technical possibilities, while more intensive work with the nude human figure provides exposure to gesture, structure and complex form. As students begin to develop a more sophisticated and personal approach, issues of expression and interpretation will be investigated, focusing on personal style and expression.

  Term:
  Offered Both Fall and Spring

• ADF-S152 3-Dimensional Design

  Prerequisites:
  ADF S151 or ADF S166

  Credits:
  3.00

  Description:
  This course focuses on the fundamental elements of three-dimensional form. Line, plane and volume will be explored as students develop visual analysis and critical thinking skills in the round. The role of scale, proportion, structure, surface, light and display will be addressed, as students create forms that activate space and engage the viewer. The course will proceed from work with simple forms and techniques to more challenging and comprehensive problems addressing both additive and subtractive methods.

  Term:
  Offered Both Fall and Spring

• ADF-S166 2D/Color

  Credits:
  3.00

  Description:
This is an introductory-level course in the basic concepts and practices of two-dimensional design and color theory. The study of color and design is supportive of all studio disciplines and is vital to the understanding of all visual media. This course features an intensive, hands-on approach to color and design as students create, modify and master the three dimensions of color (hue, value, and strength) plus the principles of design (line, shape, value, composition and image). This in-depth study is essential and underlies all of the visual arts as they are practiced today. An understanding of color and design influences all artists’ decisions, affecting the look, meaning and use of visual phenomena.

- **ADF-S172 CI: Integrated Studio II**
  
  Prerequisites:
  
  ADF S101
  
  Credits:
  
  3.00
  
  Description:

  This course builds on the Integrated Studio 1 experience: synthesizing fundamental visual ideas. IS 2 investigates the construction, documentation, and transformation of volumetric form, environmental space, and time. Projects will explore narrative strategies and the creation of immersive experiences. Students will develop critical and analytical skills while employing a range of traditional and digital media—including video/sound capture and editing—as they explore the creative boundaries of the classroom studio, the city of Boston, and virtual space.

  Type:

  Creativity and Innovation

- **ADI-S106 Interior Design Communications**
  
  Prerequisites:
  
  Take ADF-S101 ADI-S108 OR ADI-S205;
  
  Credits:
  
  3.00
  
  Description:

  Interior Design Communications teaches students how drawing media, observational drawing, perspective theory, color and design graphics can be integrated into the designer's process. In addition to exploring contrast, accent, reflection, shade and shadow, the course underscores the importance of freehand sketching as a tool to foster intellectual inquiry and convey design concepts to a wider audience. The course introduces students to manual and digital methods for composing work for conceptual expression, technical drawing presentation, and portfolio purposes.
• **ADI-S108 Perspective Principles**

Prerequisites:

Prior or concurrent drawing experience

Credits:

3.00

Description:

This course introduces students to the systems of perspective developed during the Renaissance as a means of creating the illusion of 3-dimensional space on a 2-dimensional surface. Using 1-, 2-, and 3-point perspective, students will learn to effectively represent space. Basic drafting techniques and architectural scale are introduced. Both free-hand sketching and technical drawing methods will be emphasized. Manipulation of drawing through computerized scanning and digital photography included.

Term:

Offered Both Fall and Spring

• **ADI-S110 Digital Orthographics**

Prerequisites:

Take ADI-S108 OR ADI-S205;

Credits:

3.00

Description:

This course will provide students with an understanding of orthographic principles and their importance to spatial thinking and design communication. Students will produce manual drawings in order to manipulate scale. Students will employ Computer Aided Drafting (CAD) software to create measured architectural plans, elevations and sections. The course will introduce students to file management skills and develop proficiency in using cloud based resources. Students will employ virtual workspaces to conduct work in, and out of class. Vector graphic software will also be used to compose work, manipulate technical drawings and illustrate plans and sections for portfolio use.

Term:

Offered Both Fall and Spring

• **ADI-S201 Interior Design Studio I**
Prerequisites:

ADF S152, ADF S143, ADI S110 Prior to or concurrent with ADI 234 Take ADI S106 or ADI S205

Credits:

3.00

Description:

This studio introduces students to basic design principles, design theory and concept development. Emphasis will be placed on design process, problem solving, spatial organization, anthropometrics, universal design awareness, and presentation techniques. Students will be given a series of projects of increasing complexity, utilizing and building upon the skills developed in the Foundation courses. Students will be expected to produce process diagrams, plans, elevations, models, and finish boards.

Term:

Offered Both Fall and Spring

• ADI-S202 Residential Design Studio

Prerequisites:

ADI S201 AND ADF S102

Credits:

3.00

Description:

This course addresses residential interior environments on a large scale. Students will develop client contact and programming skills. Emphasis will be placed on residential precedents, design process, human factors, accessibility, building codes, diagramming, spatial organization, detailing, presentation techniques, furnishings, finishes and lighting.

Term:

Offered Both Fall and Spring

• ADI-221 History of Furniture & Architecture I

Credits:

4.00

Description:

The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the
visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of furniture and architecture.

Term:
Offered Both Fall and Spring

Type:
Humanities & History, Humanities Literature Requirement

**ADI-222 History of Furniture & Architecture II**

**Prerequisites:**
ADI 221

**Credits:**
4.00

**Description:**
A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become actively involved in stylistic progression, local living history, and the benefits of preserving our past for future generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:
Offered Both Fall and Spring

Type:
Humanities & History, Humanities Literature Requirement

**ADI-234 History & Theory of Interior Architecture**

**Prerequisites:**
Taken concurrently with ADI S201

**Credits:**
3.00

**Description:**
This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon
the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:
Offered Fall Term

Type:
Vis. & Perform Thry & Hst

- **ADI-242 Interior Codes & Construction**

  Prerequisites:

  Prerequisite: ADI S110 or S510.

  Credits:

  3.00

  Description:

  This course examines various interior construction assemblies of non-load-bearing walls, load-bearing walls, floors, stairs, elevators, fireplaces, ceilings, doors, interior windows, frames, millwork and fire-related construction. Emphasis will be placed on building codes including state, BOCA, Underwriters Laboratory, ASTM, state and federal accessibility codes and construction materials. Students will also be introduced to basic structural concepts and characteristics of structural materials.

  Term:

  Offered Both Fall and Spring

- **ADI-244 Interior Materials & Finishes**

  Prerequisites:

  Intended for majors only

  Credits:

  3.00

  Description:

  Students will study the visual qualities, technical characteristics and applications of the common materials and finishes used in interior installations. These materials include floor coverings, wall coverings, textiles, ceiling and sustainable materials. Related fire, health and safety codes, as well as maintenance and life cycle costs, will be discussed. Class material will be presented in the form of lectures, guest speakers and a tour of the Boston Design Center. Students will learn to analyze, select and specify materials and finishes for the appropriate applications, write specifications, and prepare a resource notebook.
• ADI-254 Lighting

Prerequisites:
Prior drafting or CAD experience recommended

Credits:
3.00

Description:
This course introduces students to the art and technology of lighting and explores the use of lighting as a design element in the interior environment. Class material will be presented as a series of lectures, readings and demonstrations. Students will learn to analyze interior lighting installations, calculate lighting levels for interiors, select appropriate light fixtures and prepare a lighting plan based on one of their studio projects.

Term:
Offered Both Fall and Spring

• ADI-S264 Advanced Interior Design Communication

Prerequisites:
Take ADI-S106 and ADI-S110 (Required) Take ADF-S101 (Recommended)

Credits:
3.00

Description:
As a continuation of the Interior Design Communication course, students will develop proficiency in communicating aspects of the design process. These process skills include digital wireframe modeling and manual drawings enhanced by digital tools. Students will employ three-dimensional rendering software to enhance perspectives and create walk-through visualizations of their digital models. Movie editing software will be used to create multimedia presentations and students will learn to employ a variety of media formats for presenting their work.

Term:
Offered Both Fall and Spring

• ADI-S303 Contract Design Studio I

Prerequisites:
This commercial design studio focuses on the design of work environments. Students will develop programming and space planning skills unique to these environments through a series of small- to medium-sized projects. Emphasis will be placed on commercial precedents, programming, design process, human factors, building codes, ADA, spatial organization, detailing, presentation techniques, office furniture systems, equipment, finishes, and lighting.

Term:
Offered Both Fall and Spring

**ADI-S304 Furniture and Detailing Studio**

Prerequisites:
ADI S201, ADI S264

Credits:
3.00

Description:
This course introduces students to the design process as it applies to furniture, addressing furniture ergonomics, materials, construction techniques, manufacturing and design. Students will research selected topics, and design seating, work/service pieces and cabinetry. Emphasis will be placed on furniture precedents, research, design process, human factors, accessibility, detailing, documentation and presentation techniques.

Term:
Offered Both Fall and Spring

**ADI-S305 Contract Design Studio II**

Prerequisites:
ADI S202, ADI 221, ADI S110

Credits:
3.00

Description:
This studio focuses on adaptive re-use and renovation of commercial interiors with attention given to historical buildings in the Boston area. Emphasis on creative problem-solving methods and a philosophical approach to
medium- and large-scale hospitality and retail design projects. Students will be required to incorporate the skills and knowledge gained throughout their studies to create a comprehensive project, including presentation drawings, models, material and furniture boards, and a set of construction documents and specifications.

Term:
Offered Fall Term

- **ADI-352 Environmental Systems**

  **Prerequisites:**
  ADI 242

  **Credits:**
  3.00

  **Description:**
  This course studies mechanical, electrical, and plumbing technology and systems commonly employed in residential and commercial interiors. It will introduce students to the vocabulary, concepts and basic components of these fields of engineering. This will enable students to integrate these building systems in their design work and communicate ideas effectively with project engineers and contractors. The course will include commonly used heating, ventilating, air conditioning, plumbing piping and fixtures, fire sprinklers, electrical supply and distribution, smoke detection and fire alarm systems. Related mechanical, electrical and plumbing codes will also be discussed.

  Term:
  Offered Both Fall and Spring

- **ADI-S372 Construction Documents**

  **Prerequisites:**
  ADI S110 AND ADI S201

  **Credits:**
  3.00

  **Description:**
  Building on the curriculum of Orthogonal Drawing, this course will explore in more detail the features of CAD and BIM software. Programs will be used as tools to draft, organize, and produce a set of construction documents. Students will complete a full set of contract documents.

  Term:
  Offered Both Fall and Spring
• ADI-384 Interiors Marketing & Contracts
  
  Prerequisites:
  
  ADI-S201; Intended for majors only
  
  Credits:
  
  3.00
  
  Description:
  
  This course will cover the business aspects of interior design, including firm management, client, and contractor relationships, project management, proposal writing, and market resourcing. In addition, students will be exposed to career planning practices, such as portfolio development, resume preparation and interviewing techniques. Tours of architectural and interior design firms will also be included.
  
  Term:
  
  Offered Both Fall and Spring
  
• ADI-398 Senior Programming & Pre-Design
  
  Prerequisites:
  
  ADI S201, ADI S202, ADI S303, ADI S304, ADI S372
  
  Credits:
  
  3.00
  
  Description:
  
  This course is designed to be the first part of the BFA Senior Studio in Interior Design. The senior ID project is intended as the culmination of the interior design studio sequence. It is an individual effort, supported by the studio faculty, that is inclusive of the entire design process from the programming phase through final design and documentation. The objective of part one, Senior Programming & Pre-Design, is for individual students to research, develop, and draft a program document which will guide their design work in part two, Senior Studio. Students will explore the possible project types and precedents, select and develop a client profile and program, and research and analyze an architectural site. Written and graphic analysis tools will be employed. The preliminary conceptual (pre-design) phase of work is also introduced.
  
  Term:
  
  Offered Spring Term
  
• ADI-400 Interior Design Internship
  
  Prerequisites:
  
  ADI S202 and ADI S303; senior BFA standing required. This course fulfills the Expanded Classroom Requirement
  
  Credits:
With the assistance of the faculty advisor, each student will identify an appropriate internship site with a local interior design firm. All interns are required to complete 120 hours of work/study within the semester, working a minimum of 8 hours per week under the direction of a qualified Interior Designer. Interns are expected to contribute to the host firm at a high level of design interaction. All interns will meet bi-weekly with the faculty advisor. The classroom seminars will reinforce new skills, share learning experiences, and answer questions or concerns. A firm site visit, production of firm profile, and participation in a professional organization are required within the seminar.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

**ADI-S401 Senior Studio**

Prerequisites:

ADI S201, ADI S202, ADI S303, ADI S304, ADI S305, ADI S372 AND ADI 398

Credits:

3.00

Description:

This studio course completes the undergraduate studio sequence in Interior Design. This final design studio emphasizes individual competence with respect to the total design process. Students will utilize the research and programming document produced in ADI 398, Senior Programming & Pre-Design, to develop a comprehensive design solution for their individual studio problem through schematics, design development, presentation drawings and specifications.

Term:

Offered Spring Term

**ARH-101 Art History I**

Credits:

4.00

Description:

Surveys the art of Western civilization from prehistoric caves to medieval cathedrals. Considers works from the Ancient Near East, Ancient Egypt, Ancient Greece and Rome, the Byzantine Era, the Romanesque Period, and
the Gothic Period in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

- ARH-102 Art History II

Credits:

4.00

Description:

Surveys the art of Europe and America from the Renaissance to the present. Considers work of painting, sculpture, and architecture from periods such as the Renaissance, the Baroque, the Rococo, Neoclassicism, Romanticism, Impressionism, Abstract Impressionism, and Post-Modernism in their historical contexts. Introduces students to formal analysis, iconography, and critical thinking.

Term:

Offered Both Fall and Spring

Type:

Humanities Literature Requirement, Vis. & Perform Thry & Hst

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Interior Design

The New England School of Art & Design offers a Bachelor of Fine Arts in Interior Design.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Accelerated Bachelor's/Master's Degree in Interior Architecture
- Interior Design Courses

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of the Interior Design BFA degree program.
2. Student must also meet all requirements for the Master's degree in Interior Architecture.
3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.
4. Before enrolling in a particular graduate course during the senior year, a student must obtain permission from the program director.
5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor’s degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

- Accelerated Bachelor's/Master's Degree in Interior Architecture
- Interior Design Courses

• ADI-01 Introduction to Interior Design & Decoration

  Credits:

  2.00

  Description:

  This elective course is designed to aid students in determining whether to pursue a career in interior design and decorating. Through both lectures and studio work, students will be shown basic drafting and graphic communication techniques used in presentation of visual ideas, as well as various elements of interior composition, such as space planning, color, furniture, finish and material selection. The final project will be suitable for inclusion in a portfolio. Normally offered each semester.

  Term:

  Offered Both Fall and Spring

• ADI-221 History of Furniture & Architecture I

  Credits:

  4.00

  Description:

  The goal of this course is the enhancement of the student's critical comprehension of historic styles and the impact they have on contemporary design solutions. The survey begins with the Egyptian period and provides an overview of the history of furniture and architecture through the mid-1700s, including ancient Greece and Rome, the Gothic and Renaissance, Baroque and Rococo periods. Emphasis will be placed on chronological periods, the
visual characteristics of each style including regional idiosyncrasies, and the terminology germane to a study of
furniture and architecture.

Term:
Offered Both Fall and Spring

Type:
Humanities & History, Humanities Literature Requirement

• ADI-222 History of Furniture & Architecture II

Prerequisites:
ADI 221

Credits:
4.00

Description:
A continuation of History of Furniture & Architecture I, this course will extend the investigation of furniture and
architecture into the 20th century, while addressing issues concerning preservation, restoration, rehabilitation, and
adaptive re-use. Drawing on the vast resources of the city of Boston and its environs, students will become
actively involved in stylistic progression, local living history, and the benefits of preserving our past for future
generations. Field trips will include visits to restored Federal, Victorian and Contemporary venues.

Term:
Offered Both Fall and Spring

Type:
Humanities & History, Humanities Literature Requirement

• ADI-223 History of Furniture & Architecture

Credits:
4.00

Description:
This course provides students with the skills to critically analyze historic styles and examine the impact they have
had on design. Emphasis will be placed on chronological periods, from antiquity to the 21st century. By examining
visual characteristics of each time period, the course reveals how geography, culture and societal values have
shaped furniture and architecture for centuries. The course also introduces terminology germane to a study of
contemporary furniture and architecture styles. Using the city of Boston as a reference point, students will explore
issues of preservation, restoration, rehabilitation, and adaptive re-use in order to identify how the region's design
landscape is adapting to environmental and social demands.
ADI-234 History & Theory of Interior Architecture

Prerequisites:
Taken concurrently with ADI S201

Credits:
3.00

Description:
This course introduces students to the important individuals, ideas and issues that have shaped the direction of contemporary interior design practice in the twentieth century, building upon the historical foundation established by the Ideas of Western Art and History of Furniture and Architecture classes. Intermixing lectures and readings with visits to important local buildings, it discusses the influences of culture, technology, fashion and media upon the work and thinking of the first generation of modern designers, as well as emerging social, moral and environmental imperatives that will form the basis of future practice; cultural identity, interdisciplinary collaboration, sustainability and universal design.

Term:
Offered Fall Term

Type:
Vis. & Perform Thry & Hst

ADI-242 Interior Codes & Construction

Prerequisites:
Prerequisite: ADI S110 or S510.

Credits:
3.00

Description:
This course examines various interior construction assemblies of non-load-bearing walls, load-bearing walls, floors, stairs, elevators, fireplaces, ceilings, doors, interior windows, frames, millwork and fire-related construction. Emphasis will be placed on building codes including state, BOCA, Underwriters Laboratory, ASTM, state and federal accessibility codes and construction materials. Students will also be introduced to basic structural concepts and characteristics of structural materials.

Term:
Offered Both Fall and Spring

ADI-244 Interior Materials & Finishes

Prerequisites:
Students will study the visual qualities, technical characteristics and applications of the common materials and finishes used in interior installations. These materials include floor coverings, wall coverings, textiles, ceiling and sustainable materials. Related fire, health and safety codes, as well as maintenance and life cycle costs, will be discussed. Class material will be presented in the form of lectures, guest speakers and a tour of the Boston Design Center. Students will learn to analyze, select and specify materials and finishes for the appropriate applications, write specifications, and prepare a resource notebook.

Term:
Offered Both Fall and Spring

- **ADI-254 Lighting**

  Prerequisites:
  Prior drafting or CAD experience recommended

  Credits:
  3.00

  Description:
  This course introduces students to the art and technology of lighting and explores the use of lighting as a design element in the interior environment. Class material will be presented as a series of lectures, readings and demonstrations. Students will learn to analyze interior lighting installations, calculate lighting levels for interiors, select appropriate light fixtures and prepare a lighting plan based on one of their studio projects.

  Term:
  Offered Both Fall and Spring

- **ADI-306 Portfolio**

  Prerequisites:
  Senior Status

  Credits:
  3.00

  Description:
This course employs manual and digital skills to develop a professional portfolio. Students will investigate key components of portfolio content and consider how existing graphic skills can be employed to demonstrate ideas creatively and substantively. Through hands-on mock up and layout techniques students compare and contrast different presentation formats in advance of digital composition. Students will also explore methods for documenting and archiving their own work. In addition to presenting final work, students will also explore ways to present research, schematic analysis and precedent investigations.

Term:
Offered Both Fall and Spring

- **ADI-333 Linked Generations: Survey of Contemporary Spanish Architecture**
  
  **Credits:**
  3.00
  
  **Description:**
  This seminar aims to reveal the key elements of contemporary practices by analyzing the relationship between the masters of Spanish architecture of the 20th C. and the generations following. It will focus on such figures such as Saenz de Oiza, Fisac and De la Sota, continuing with current masters such as Campo Baeza, Moneo and Navarro Baldeweg, the first generation of Spanish architects to have international recognition. More recent inheritors include Aparicio, Abalo, Herreros, Mansilla & Tunon, Nieto Sobejano and Miralles, professionals with prominent academic positions worldwide. Attention will also be given to a new generation of promising architects (Garcia Abril, Sanchez, Jaque, Virseda Vila, Fernandez) whose projects are outstanding for the rigor of their construction and sensitivity to their natural and cultural surroundings. Class lectures will be accompanied by site visits to Madrid buildings designed by these architects, as well as to the studio offices where some of them actually work, to familiarize the students with how these small-scale firms develop their projects. Students will individually carry out a conceptual analysis of a prominent building through sketching and diagrammatic modeling of its principal architectural elements, with a final presentation of the results to a panel of critics.

- **ADI-352 Environmental Systems**
  
  **Prerequisites:**
  ADI 242
  
  **Credits:**
  3.00
  
  **Description:**
  This course studies mechanical, electrical, and plumbing technology and systems commonly employed in residential and commercial interiors. It will introduce students to the vocabulary, concepts and basic components of these fields of engineering. This will enable students to integrate these building systems in their design work and communicate ideas effectively with project engineers and contractors. The course will include commonly used heating, ventilating, air conditioning, plumbing piping and fixtures, fire sprinklers, electrical supply and distribution, smoke detection and fire alarm systems. Related mechanical, electrical and plumbing codes will also be discussed.
• ADI-384 Interiors Marketing & Contracts
  
  Prerequisites:
  ADI-S201; Intended for majors only
  
  Credits:
  3.00
  
  Description:
  This course will cover the business aspects of interior design, including firm management, client, and contractor relationships, project management, proposal writing, and market resourcing. In addition, students will be exposed to career planning practices, such as portfolio development, resume preparation and interviewing techniques. Tours of architectural and interior design firms will also be included.

  Term:
  Offered Both Fall and Spring

• ADI-398 Senior Programming & Pre-Design
  
  Prerequisites:
  ADI S201, ADI S202, ADI S303, ADI S304, ADI S372
  
  Credits:
  3.00
  
  Description:
  This course is designed to be the first part of the BFA Senior Studio in Interior Design. The senior ID project is intended as the culmination of the interior design studio sequence. It is an individual effort, supported by the studio faculty, that is inclusive of the entire design process from the programming phase through final design and documentation. The objective of part one, Senior Programming & Pre-Design, is for individual students to research, develop, and draft a program document which will guide their design work in part two, Senior Studio. Students will explore the possible project types and precedents, select and develop a client profile and program, and research and analyze an architectural site. Written and graphic analysis tools will be employed. The preliminary conceptual (pre-design) phase of work is also introduced.

  Term:
  Offered Spring Term

• ADI-400 Interior Design Internship
Prerequisites:
ADI S202 and ADI S303; senior BFA standing required. This course fulfills the Expanded Classroom Requirement

Credits:
3.00

Description:
With the assistance of the faculty advisor, each student will identify an appropriate internship site with a local interior design firm. All interns are required to complete 120 hours of work/study within the semester, working a minimum of 8 hours per week under the direction of a qualified Interior Designer. Interns are expected to contribute to the host firm at a high level of design interaction. All interns will meet bi-weekly with the faculty advisor. The classroom seminars will reinforce new skills, share learning experiences, and answer questions or concerns. A firm site visit, production of firm profile, and participation in a professional organization are required within the seminar.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

- **ADI-500 Interior Design Directed Study**
  
  Prerequisites:
  Consent of Program Director required.

  Credits:
  1.00- 6.00

  Description:
  Directed Study/Studio allows students to pursue an in-depth research project in an area of particular interest, directed by a qualified faculty member. Available every semester.

- **ADI-H500 Interior Design Directed Study**
  
  Prerequisites:
  Consent of Program Director required.

  Credits:
  1.00- 6.00

  Description:
Directed Study/Studio allows students to pursue an in-depth research project in an area of particular interest, directed by a qualified faculty member. Available every semester.

Type:
Honors

- **ADI-S106 Interior Design Communications**

  **Prerequisites:**
  Take ADF-S101 ADI-S108 OR ADI-S205;

  **Credits:**
  3.00

  **Description:**
  Interior Design Communications teaches students how drawing media, observational drawing, perspective theory, color and design graphics can be integrated into the designer's process. In addition to exploring contrast, accent, reflection, shade and shadow, the course underscores the importance of freehand sketching as a tool to foster intellectual inquiry and convey design concepts to a wider audience. The course introduces students to manual and digital methods for composing work for conceptual expression, technical drawing presentation, and portfolio purposes.

  **Term:**
  Offered Both Fall and Spring

- **ADI-S107 Spatial Graphics**

  **Credits:**
  3.00

  **Description:**
  Students will be exposed to a range of software applications commonly used in the design industry. Exercises will be used to enhance compositional skills, demonstrate the effective utilization of color and how to integrate images, drawings and vector graphics. Work will be presented in a variety of formats common to studio and client presentations. Students will compose multi-page documents and develop an understanding of appropriate file hierarchies. Exercises expose students to the experiential qualities of design through an exploration of signs, symbols and maps. In addition to 2D graphic solutions, vector graphics for generating 3D artifacts using digital fabrication tools, will be employed.

- **ADI-S108 Perspective Principles**

  **Prerequisites:**
  Prior or concurrent drawing experience
This course introduces students to the systems of perspective developed during the Renaissance as a means of creating the illusion of 3-dimensional space on a 2-dimensional surface. Using 1-, 2-, and 3-point perspective, students will learn to effectively represent space. Basic drafting techniques and architectural scale are introduced. Both free-hand sketching and technical drawing methods will be emphasized. Manipulation of drawing through computerized scanning and digital photography included.

Term:
Offered Both Fall and Spring

- **ADI-S110 Digital Orthographics**
  
  Prerequisites:
  Take ADI-S108 OR ADI-S205;
  
  Credits:
  3.00
  
  Description:
  This course will provide students with an understanding of orthographic principles and their importance to spatial thinking and design communication. Students will produce manual drawings in order to manipulate scale. Students will employ Computer Aided Drafting (CAD) software to create measured architectural plans, elevations and sections. The course will introduce students to file management skills and develop proficiency in using cloud based resources. Students will employ virtual workspaces to conduct work in, and out of class. Vector graphic software will also be used to compose work, manipulate technical drawings and illustrate plans and sections for portfolio use.
  
  Term:
  Offered Both Fall and Spring

- **ADI-S201 Interior Design Studio I**
  
  Prerequisites:
  ADF S152, ADF S143, ADI S110 Prior to or concurrent with ADI 234 Take ADI S106 or ADI S205
  
  Credits:
  3.00
  
  Description:
This studio introduces students to basic design principles, design theory and concept development. Emphasis will be placed on design process, problem solving, spatial organization, anthropometrics, universal design awareness, and presentation techniques. Students will be given a series of projects of increasing complexity, utilizing and building upon the skills developed in the Foundation courses. Students will be expected to produce process diagrams, plans, elevations, models, and finish boards.

Term:
Offered Both Fall and Spring

- **ADI-S202 Residential Design Studio**

  **Prerequisites:**
  ADI S201 AND ADF S102

  **Credits:**
  3.00

  **Description:**
  This course addresses residential interior environments on a large scale. Students will develop client contact and programming skills. Emphasis will be placed on residential precedents, design process, human factors, accessibility, building codes, diagramming, spatial organization, detailing, presentation techniques, furnishings, finishes and lighting.

  Term:
  Offered Both Fall and Spring

- **ADI-S215 Human Factors & Universal Design**

  **Credits:**
  3.00

  **Description:**
  In this course, students will explore how physiological and psychological factors inform the design of space. Students participate in a series of design challenges that explore topics such as anthropometrics, ergonomics, and proxemics. The seven principles of universal design will be examined through a sequence of charrette exercises. Students will solicit input from User-Experts and employ a more inclusive design process to develop equitable design solutions. In doing so, culture, gender, age, and physical ability will be identified as catalysts for creativity and innovation.

- **ADI-S264 Advanced Interior Design Communication**

  **Prerequisites:**
  Take ADI-S106 and ADI-S110 (Required) Take ADF-S101 (Recommended)
Credits:
3.00

Description:

As a continuation of the Interior Design Communication course, students will develop proficiency in communicating aspects of the design process. These process skills include digital wireframe modeling and manual drawings enhanced by digital tools. Students will employ three-dimensional rendering software to enhance perspectives and create walk-through visualizations of their digital models. Movie editing software will be used to create multimedia presentations and students will learn to employ a variety of media formats for presenting their work.

Term:
Offered Both Fall and Spring

- **ADI-S303 Contract Design Studio I**

  **Prerequisites:**

  ADF S102, ADI S201, ADI 242, ADI 244, ADI S264

  **Credits:**

  3.00

  **Description:**

  This commercial design studio focuses on the design of work environments. Students will develop programming and space planning skills unique to these environments through a series of small- to medium-sized projects. Emphasis will be placed on commercial precedents, programming, design process, human factors, building codes, ADA, spatial organization, detailing, presentation techniques, office furniture systems, equipment, finishes, and lighting.

  **Term:**

  Offered Both Fall and Spring

- **ADI-S304 Furniture and Detailing Studio**

  **Prerequisites:**

  ADI S201, ADI S264

  **Credits:**

  3.00

  **Description:**

  This course introduces students to the design process as it applies to furniture, addressing furniture ergonomics, materials, construction techniques, manufacturing and design. Students will research selected topics, and design
seating, work/service pieces and cabinetry. Emphasis will be placed on furniture precedents, research, design process, human factors, accessibility, detailing, documentation and presentation techniques.

Term:
Offered Both Fall and Spring

- **ADI-S305 Contract Design Studio II**

  Prerequisites:
  ADI S202, ADI 221, ADI S110

  Credits:
  3.00

  Description:

  This studio focuses on adaptive re-use and renovation of commercial interiors with attention given to historical buildings in the Boston area. Emphasis on creative problem-solving methods and a philosophical approach to medium- and large-scale hospitality and retail design projects. Students will be required to incorporate the skills and knowledge gained throughout their studies to create a comprehensive project, including presentation drawings, models, material and furniture boards, and a set of construction documents and specifications.

Term:
Offered Fall Term

- **ADI-S366 Environmental Graphic Design**

  Prerequisites:
  ADI S372

  Credits:
  3.00

  Description:

  A cross-disciplinary course bringing together interior design students and graphic design students at the senior BFA level to collaborate on problem-solving in the visual and built environments. In the studio, students will be exposed to design issues and problems, both experiential and graphic. Students will be working in teams bringing new insight to solutions for a variety of client/project types. Field trips to fabricators, professional firms and EGD sites will be included. This is a survey class designed to introduce students to ways of producing three-dimensional graphic design projects within the built environment.

Term:
Offered Fall Term
• ADI-S372 Construction Documents

Prerequisites:
ADI S110 AND ADI S201

Credits:
3.00

Description:
Building on the curriculum of Orthogonal Drawing, this course will explore in more detail the features of CAD and BIM software. Programs will be used as tools to draft, organize, and produce a set of construction documents. Students will complete a full set of contract documents.

Term:
Offered Both Fall and Spring

• ADI-S401 Senior Studio

Prerequisites:
ADI S201, ADI S202, ADI S303, ADI S304, ADI S305, ADI S372 AND ADI 398

Credits:
3.00

Description:
This studio course completes the undergraduate studio sequence in Interior Design. This final design studio emphasizes individual competence with respect to the total design process. Students will utilize the research and programming document produced in ADI 398, Senior Programming & Pre-Design, to develop a comprehensive design solution for their individual studio problem through schematics, design development, presentation drawings and specifications.

Term:
Offered Spring Term

• ADI-S500 Interior Design Directed Studio

Credits:
1.00- 6.00

Description:
The student completes a directed study project, either studio (ADI S500) or non-studio (ADI 500), under the supervision of an interior design faculty member. Please see Directed Study elsewhere in this catalog for details.
All independent study projects must be approved by the individual faculty member, the Interior Design Program Director and the NESADSU Chairman. Available each semester.
International Economics

Major Requirements

Students who wish to acquire a strong background in economics should choose the BS, which emphasizes economic decision making within a global environment.

Core Requirements (10 courses, 32 credits)

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

  Prerequisites:

  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

  Credits:

  1.00

  Description:

  This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- **EC-101 Applied Microeconomics**

  Prerequisites:
Non CAS majors need to have completed at least 15 credits.

Credits:

3.00

Description:

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods and services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **EC-102 Global Macroeconomics**

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country’s exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country’s central bank. It examines the basis and pattern of international trade and the effects of a country’s trade policy on the economy.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **STATS-250 Applied Statistics**

Prerequisites:

MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

Credits:
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:
Quantitative Reasoning

- **EC-430 International Trade Theory & Policy**

  Prerequisites:

  EC 101 and EC 102

  Credits:

  4.00

  Description:

  This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

  Type:
  Social Science,BSJ SOCIAL SCIENCE

- **EC-442 International Monetary Economics**

  Prerequisites:

  EC 101 and EC 102

  Credits:

  4.00

  Description:

  The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

  Type:
  Social Science,BSJ SOCIAL SCIENCE
EC-450 Applied Econometrics

Prerequisites:

STATS-250 or STATS-240 or MATH-255 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

EC-511 Professional Development in Economics

Prerequisites:

CAS-201 and at least 54 credits

Credits:

1.00

Description:

This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation.

Choose one of the following Economics courses:

EC-141 Development Economics

Credits:

4.00

Description:
Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

EC-151 Economic & Human Geography

Credits:

4.00

Description:

The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

EC-311 Intermediate Micro Theory

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science,BSJ SOCIAL SCIENCE
EC-312 Intermediate Macro Theory

Prerequisites:
EC-101 and EC-102

Credits:
4.00

Description:
This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:
Social Science, BSJ SOCIAL SCIENCE

Electives (1 course, 4 credits)
Choose one elective from the Economics course list.

Major Requirements for BA in International Economics: 13 courses, 44 credits

Students who wish to acquire a broad liberal arts preparation with a strong emphasis on languages and cultures should choose the BA. Students choosing the BA take five courses in French or Spanish. Those who enter the program with considerable foreign language experience will be required to take alternative courses as determined by advisor.

Core Requirements (8 courses, 24 credits)

- CAS-201 College to Career: Explore Your Options And Find Your Path

Prerequisites:
CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. World Language Requirement (5 courses, 20 credits)

Choose five courses in French or Spanish

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
International Economics

- Major Requirements
- Societies
- Economics Courses
- French Courses
- Spanish Courses

Omicron Delta Epsilon

Membership in Omicron Delta Epsilon, the international honor society in economics, is open to juniors and seniors who have a grade point average of “B” or higher in at least four economics courses and who have maintained an overall grade point average of “B” or higher. Members receive a certificate recognizing their scholastic achievement and have the opportunity to enter an economics essay contest.

Suffolk Economic Association

Membership in the Suffolk Economic Association is open to all members of the university community. The association sponsors lectures and seminars on economic issues and on careers in Economics.

- EC-H101 Honors Principles of Microeconomics
  Prerequisites:
  Honors Section Only : GPA of 3.3 or higher required.
  
  Credits:
  3.00
Introduction to the organization and operation of a market economy with a focus on how it allocates scarce resources; the analysis of consumer demand and profit maximizing behavior of business; examination of pricing and output decisions under conditions of competition, monopoly and imperfect competition. Analysis of markets for labor and capital. Policy issues include price ceilings and floors, competition and monopoly. Normally offered every semester.

Type:

Social Science, BSJ SOCIAL SCIENCE, Honors

- **EC-102 Global Macroeconomics**

  Prerequisites:

  Non-CAS majors need to have completed at least 15 credits

  Credits:

  3.00

  Description:

  This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. - **EC-H102 Honors Global Macroeconomics**

  Prerequisites:

  GPA of 3.3 or higher

  Credits:

  3.00

  Description:

  The measurement of economic growth; introduction to the theory of determination of national income and the price level; unemployment and inflation; theories on economic growth and the role of labor and capital in economic growth; functioning and impact of the monetary system; analysis of monetary and fiscal policies for
economic stabilization; international transactions and their influence on the domestic economy. Prerequisites: GPA of 3.2 or higher. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE, Honors

- **EC-131 Environmental Economics**

  Credits:

  4.00

  Description:

  Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially preferable level of pollution. Traces role played by institutions, including common ownership, in affecting environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **EC-141 Development Economics**

  Credits:

  4.00

  Description:

  Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? - **EC-300 Professional Development in Economics**

  **Prerequisites:**

  EC-101 and EC-102 and at least 54 credits

  **Credits:**

  1.00

  **Description:**

  This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation. Ordinarily taken during junior year. Offered during the fall semester.

- **EC-311 Intermediate Micro Theory**

  **Prerequisites:**

  EC 101 and EC 102

  **Credits:**

  4.00

  **Description:**

  Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

  **Type:**

  Social Science, BSJ SOCIAL SCIENCE

- **EC-312 Intermediate Macro Theory**
Prerequisites:
EC-101 and EC-102

Credits:
4.00

Description:
This course covers the neoclassical and Keynesian models of aggregate economic activity. Coverage of the measurement of economic variables, such as aggregate income, the inflation rate, and the unemployment rate. Examines the behavior of the economy under conditions of price flexibility in the long run and price rigidity in the short run under rational and adaptive expectations. Analysis of the effect of changes in taxes and government expenditures, monetary policy and deficits on the economy. Coverage of the sources of economic growth. Required of all majors in Economics. Normally offered every semester.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **EC-420 Special Topics in Economics**

  Credits:
  4.00

  Description:
  Special Topics course. Topic varies semester to semester.

  Type:
  Social Science

- **EC-421 Public Finance**

  Prerequisites:
  EC 101 and EC 102

  Credits:
  4.00

  Description:
  The theory of tax policy and tax structure. The effects on economic behavior (including labor supply, saving, risk-taking and investment, charitable giving, and growth) of different taxes (income, sales, value-added, inheritance, wealth, property). Tax equity, efficiency and incidence, in the United States and in comparative perspective. Additional topics include modeling state taxes; social security and pensions; and tax compensation. Normally offered yearly.
• **EC-423 Economics of Regulation**

  **Prerequisites:**
  
  EC 101 and EC 102

  **Credits:**
  
  4.00

  **Description:**

  This course examines regulation and analyzes the structure, conduct, and performance of American industry. Monopoly and strategic behavior in oligopoly and monopolistic competition are considered. U.S. antitrust law and the effect of regulatory laws on industrial performance are explored. Regulatory practices, rate setting, deregulation, public-enterprise pricing, and issues in privatization are examined, with an emphasis on case studies and policy analysis. Normally offered every other year.

• **EC-430 International Trade Theory & Policy**

  **Prerequisites:**
  
  EC 101 and EC 102

  **Credits:**
  
  4.00

  **Description:**

  This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the the political economy of trade are studied. Normally offered every year.

• **EC-431 History of Economic Thought**

  **Prerequisites:**
  
  EC-101 and EC-102
Credits:
4.00

Description:

Presents the leading contemporary schools of economic thought as the outcome of theoretical and philosophical controversies that began with the ancient Greeks and that continue today. The course covers the major contributors to economic thought, including Aristotle, Aquinas, the mercantilists, and the contributors to the 18th-century enlightenment, notably Adam Smith and David Hume. Going forward, it considers Marx, the neoclassical school of Jevons, Menger and Walras and the Keynesian school, along with some of the more modern schools such as behaviorism, institutionalism and cognitive economics. The contributions of the economists and philosophers studied in the course are considered in context of the times in which they wrote and lived. Students will acquire a grasp of the principal tenets of contemporary economic theory as well as an understanding of the historical origins of the disputes that still divide economists on major theoretical and philosophic issues.

Type:

BSJ SOCIAL SCIENCE

• EC-432 Managerial Economics

Prerequisites:

EC-101 and EC-102

Credits:

4.00

Description:

Managerial economics applies microeconomic and quantitative analysis to the formulation of rational managerial decisions. These tools shape decisions about output and pricing, about the choice of product quality, the type of production process used, the mix of inputs employed, the suitability of mergers and acquisitions, the management of risk, and the design of incentives in a world of imperfect information. This course explains the tools of managerial economics, puts them into context using numerous case studies, and applies them to significant real business situations.

Type:

Quantitative Reasoning

• EC-433 Public Choice

Prerequisites:

EC-101 and EC-102

Credits:

4.00
This course considers the degree to which it is possible to explain, predict, and guide political decision through the application of economic analysis. The course is organized around two competing visions of public choice: (1) a traditional organic approach that sees the core problem for public choice as requiring the maximization of social welfare and (2) a newer contractual approach that sees that problem as requiring attention to the institutional framework within which political decisions are made. Topics to be considered include the Arrow paradox and other problems in aggregating individual choices, rent-seeking, the Leviathan hypothesis, and non-market demand-revealing methods.

Type:

Social Science, BSJ SOCIAL SCIENCE

• EC-435 Economics of Energy and Natural Resources

Prerequisites:

Take EC-101;

Credits:

4.00

Description:

This course applies economic analysis to identify the origins, consequences, and policy implications of problems related to renewable and non-renewable natural resources, with particular attention to energy. Resources considered include forests, fisheries, water, minerals, and land. Energy resources covered include oil, gas, coal, nuclear, and alternatives (wind, solar, biomass, hydrogen, etc.), as well as electricity. Concepts examined include externalities, learning-by-doing, peak-load pricing, regulation, sustainability, cost-benefit analysis, and the commons problem.

Type:

BSJ SOCIAL SCIENCE, Social Science

• EC-440 International Financial Economics

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course is a combination of International Finance and Corporate Finance and designed to give students a strong foundation in the theory and practice of multinational financial management. Course materials include (a) basics of corporate finance and capital asset pricing, (b) foreign currency futures, (c) derivative securities in
foreign exchange markets such as currency futures, options, swaps, (d) exchange risk management for multinational corporations, (e) global capital markets and financial crisis.

Type:
Social Science

- **EC-442 International Monetary Economics**

  Prerequisites:
  
  EC 101 and EC 102

  Credits:
  
  4.00

  Description:
  
  The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

  Type:
  
  Social Science, BSJ SOCIAL SCIENCE

- **EC-445 The Economics of the European Union**

  Prerequisites:
  
  EC 101 and EC 102

  Credits:
  
  4.00

  Description:
  
  An economic analysis of the European Union, the history of European monetary and economic integration. and the creation of the Euro. A survey of the development and evolution of key European policies, such competition, industry, agriculture, environment, regional, etc. A discussion of economic implications of the enlargement of the European Union, as well as its trade relations with the U.S. and other countries within the context of the World Trade Organization.

  Type:
  
  Social Science, BSJ SOCIAL SCIENCE

- **EC-450 Applied Econometrics**

  Prerequisites:
STATS-250 or STATS-240 or MATH-255 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science, BSJ SOCIAL SCIENCE

• EC-460 Game Theory

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:

Quantitative Reasoning

• EC-483 Money, Banking & Financial Markets

Prerequisites:

EC 101, EC 102

Credits:

4.00
This course examines the role of depository institutions and the Federal Reserve system in determining the supply of money. The course also explains the financial environment and the role of monetary policy decisions on changes in price, interest rates, money, and economic activity. The course provides the student with both theoretical and applied analysis. Prerequisites: EC 101, EC 102.

Type:
Social Science, BSJ SOCIAL SCIENCE

- **EC-490 Senior Seminar in Economics**

  Prerequisites:

  EC-450 or STATS-350 and Senior Standing; Or permission of Undergraduate Director.

  Credits:

  4.00

  Description:

  This is a required course for all students majoring in economics, to be taken in the spring semester of their senior year. Students are required to develop an economic thesis project in consultation with the professor for the course and to present it to the class.

  Type:

  BSJ SOCIAL SCIENCE, Social Science

- **EC-503 Internship in Economics**

  Prerequisites:

  Instructor's consent required

  Credits:

  4.00

  Description:

  Approximately 12 hours per week working in a position designed to give the student responsibility and a learning opportunity in economics. Interested students should consult the instructor in advance.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **EC-504 Economic Competitiveness: Theory and Practice**
Prerequisites:
Instructor's consent required

Credits:
4.00

Description:
This course examines the concept of economic competitiveness among nations and states and its usefulness to policymakers seeking to improve economic conditions. The emphasis will be on state-based economic competitiveness. We will read the current literature on economic growth and competitiveness and explore the current controversy surrounding the shortcomings of business climate indices. Special attention will be given to Beacon Hill Institute's index which attempts to identify the states with the sets of policies that sustain long-term economic growth and sustainable high incomes for citizens. The student will apply a stress test to the BHI index identifying its strengths and weaknesses. To learn how the index is used by professionals, the student will also compare the index against similar measures and interview at least two practitioners on how their states apply the index. The student will meet regularly with her advisor and submit a research paper and a professional memorandum advising BHI on how best to improve the index.

Type:
Expanded Classroom Requirement, Social Science

- **EC-510 EC Independent Study**

  Prerequisites:
  An independent study form must be submitted to the CAS Dean's Office.

  Credits:
  1.00- 5.00

  Description:
  Independent study in economics

  Type:
  Social Science, BSJ SOCIAL SCIENCE

- **EC-511 Professional Development in Economics**

  Prerequisites:
  CAS-201 and at least 54 credits

  Credits:
  1.00
This one-credit course is designed to explore career opportunities in economics in depth. Classroom discussions, writing assignments, and site visits will help prepare students to identify and secure internship and post-graduate employment opportunities. Additional career paths, such as pursuing graduate studies in economics or related fields, and the application process, will also be addressed. The goal of this course is to help students reach their fullest professional potential following graduation.

- **STATS-250 Applied Statistics**

  **Prerequisites:**

  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

  **Credits:**

  4.00

  **Description:**

  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

  **Type:**

  Quantitative Reasoning

- **STATS-H250 Honors Applied Statistics**

  **Prerequisites:**

  MATH-128, MATH 130, 134, 146, 164 or 165 and Honors Course; GPA of 3.3 or higher

  **Credits:**

  4.00

  **Description:**

  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

  **Type:**
• STATS-350 Applied Statistical Methods

Prerequisites:

STATS 250

Credits:

4.00

Description:

This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

**SPAN-303 Modern and Contemporary Latin America**

Prerequisites:

SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:

4.00

Description:

Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

Type:

Diverse Perspectives

**SPAN-305 Living in Translation**

Prerequisites:
Examines the process and theory of translation. Materials are drawn from the literary world, the mass media (i.e. advertising, marketing, news, entertainment), and professional sources. Students gain further insights about the linguistic, cultural, and ethical dimensions of the field. Additional grammar review provided as needed.

Term:
Occasional

- **SPAN-315 Business Spanish**

  Prerequisites:
  SPAN 290 or SPAN 300 or Instructor's consent.

  Credits:
  4.00

  Description:
  Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

  Type:
  Diverse Perspectives, Global Engagement Experience

- **SPAN-340 Hispanic Culture Today: Trans-Atlantic Perspective**

  Prerequisites:
  Take SPAN 290 or SPAN 300 or Instructor's consent.

  Credits:
  4.00

  Description:
  An examination of key issues in Hispanic culture today through the study of literature, film, music and TV. The purpose of the course is twofold: To introduce the students to major themes in recent Hispanic society and culture and, to develop the necessary skills to read and analyze literary texts and other cultural forms. Topics to be discussed include dictatorship and democracy, women and representation, political and domestic violence, national identity, immigration, and mass culture. The selected materials will include texts by authors like Manuel
Rivas, Mario Vargas Llosa, Carlos Fuentes, Cristina Peri Rossi, Rosa Montero, Carlos Monsivais, and Roberto Bolano among others. (Madrid campus only)

Type:

BA FOREIGN

- **SPAN-350 Spanish Cultural Studies**

  **Credits:**

  4.00

  **Description:**

  This is an interdisciplinary course that will examine the historical and socio-economic causes of contemporary Spanish culture. Material will be drawn from a variety of sources including: history, sociology, gender studies, literature and philosophy. Extensive reference will be made to the non-Western cultures which have made Spain what it is today. (Usually taught in English). (Madrid campus only)

- **SPAN-360 Madrid Cosmopolitan City**

  **Prerequisites:**

  SPAN-290 or SPAN-300 or Instructor's consent

  **Credits:**

  4.00

  **Description:**

  This course is designed to provide students with a basic knowledge of the city of Madrid in terms of its historical, cultural, and social development. Contemporary aspects of the city such as its rise to prominence amongst the capitals of Europe and the phenomenon of recent immigration patterns will also be discussed. All classes will be conducted in Spanish. Specific grammar points will be reviewed as needed. (Madrid campus only)

  **Type:**

  BA FOREIGN, Global Engagement Experience

- **SPAN-365 Spanish Cities: An Ongoing Transformation**

  **Prerequisites:**

  Take SPAN-290; Taught in Spanish

  **Credits:**

  4.00

• SPAN-407 Latin American Short Narrative

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• SPAN-408 Latin American Cinema

Prerequisites:
Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:
4.00

Description:
Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

**SPAN-410 Representation and Reality in Spanish Cinema**

Credits:
4.00

Description:
This course offers the students a panoramic view of the most representative Spanish films from the 1950's until today, with special emphasis on its social, political, artistic and cultural context. Films will be viewed in Spanish with English subtitles. Conducted in English, the course will be open to both non-majors in Spanish as well as to advanced-level Spanish majors and minors, with the latter carrying out their written work and individual meetings with the instructor in Spanish.

**SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:
ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:
4.00

Description:
Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.
• SPAN-417 Changes in Social Values in Spain 1975 - 2005

Prerequisites:
Take SPAN 290 or SPAN 300 or Instructor's consent. SPAN 350 is strongly recommended.

Credits:
4.00

Description:
In this course we will study the transition of Spain from dictatorship to democracy from an interdisciplinary perspective based mostly on the analysis of literary works, film, visual arts and music besides relevant theoretical articles by major Spanish and international intellectuals. Youth culture (sex, drugs and rock and roll), the feminist movement, nationalistic demands, and Spain's subsequent incorporation into the European Union will be highlighted. (Madrid campus only)

Type:
BA FOREIGN

• SPAN-418 Through the Eyes of the Storyteller / Latin American Fiction and Film

Prerequisites:
ENG 102 or ENG 103 or Instructor's consent. SPAN 300 and SPAN 302 are strongly recommended for Spanish and Latin American and Caribbean Studies majors and minors.

Credits:
4.00

Description:
Examines the intersection between literature and film and the relationships between the written word and the cinematic image. The writers and cinematographers studied represent mainstream as well as marginal voices that address issues of race, gender, sexual orientation and socio-economic class in South America, the Caribbean, and Mexico.

Term:
Occasional
• SPAN-425 Literature and Art in Latin America

Prerequisites:
Span 290 or Span 300; Instructor's consent; Spanish 302 is strongly recommended

Credits:
4.00

Description:
Examine the dynamic relationships that exist between art (both visual and lyrical) and the written word. Through a juxtaposition of work by twentieth century authors from Latin America and the Caribbean and other artists who explore similar themes, students examine the multiple ways in which art and literature contribute to our understanding of life in Latin America and the Caribbean. Materials are drawn from the fields of music, photography, poetry, prose, theatre, and visual art.

Term:
Occasional

Type:
BA FOREIGN

• SPAN-427 U.S. Mexican Border in the New Millennium

Prerequisites:
SPAN 290 or 300 or Instructor's consent

Credits:
4.00

Description:
Explores the literature, culture, and history of the United States-Mexico Border, and analyzes the profound changes that the gain/loss of territories created by the Treaty of Guadalupe Hidalgo caused for the citizens in the region. Emphasis is on contemporary border theatre and film. Students read works of Salcedo, Galindo, Mijares, Rascon Banda, among others, and examine contemporary films and documentaries such as Senorita Extraviada, Victoria para Chino, and Crossing Arizona.

Term:
Occasional

Type:
• SPAN-428 From Script to Performance: Contemporary Latin American Theatre

Prerequisites:
Span 290 or 300; Span 302 is strongly recommended

Credits:
4.00

Description:
Students examine the contemporary world of Latin American Theatre. A study of basic theatre concepts and methodology prepares students to perform in Noche de teatro latinoamericano, a public performance of three one-act plays from contemporary Latin American Playwrights. Publicity and set design are also part of the course framework.

Term:
Occasional

Type:
BA FOREIGN

• SPAN-502 Honors Thesis

Prerequisites:
Senior standing & permission of the Dept. Chair

Credits:
4.00

Description:
A major research project completed under the supervision of a regular faculty member.

Term:
Offered Fall Term

Type:
BA FOREIGN

• SPAN-510 Independent Study
Prerequisites:
Instructor consent required.

Credits:
1.00- 4.00

Description:
Students meet with a department member to pursue advanced studies in areas of particular interest to them.

Term:
Occasional

Type:
BA FOREIGN

- **SPAN-I295 Spanish in the Workplace Internship**

Credits:
0.00

Description:
Internship in Madrid, Spain. At least 12 hours a week working for an organization. Designed to give students an international professional learning opportunity. It takes place concurrently with SPAN 295.

- Journalism Major Requirements
- Broadcast Journalism Concentration
- Print/Web Journalism Concentration
- Journalism Minor Requirements
- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the departments of Communication & Journalism or Advertising, Public Relations, and Digital Media.

2. Student must also meet all requirements for the Master’s degree in Communication.

3. Students will take two Communication graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.

4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.

5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor’s degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

  1.00-12.00

  Description:

  Internships and practicum in Communication and Journalism are available prior to the start of each semester.

  Term:

  Offered Both Fall and Spring

  Type:

  Expanded Classroom Requirement

- **CJN-505 Communication and Journalism Practicum**

  Prerequisites:

  12 hours of CJN coursework and CJN advisor consent

  Credits:

  1.00-12.00

  Description:

  Practicum and internship projects are available prior to the start of each semester. Prerequisites: Journalism majors with a minimum of 12 credits of coursework or permission of the Department Chairperson. 1-3 terms : 1-12 credits.

  Term:

  Offered Both Fall and Spring

  Type:

  Expanded Classroom Requirement
• CJN-506 Honors Seminar

Prerequisites:

Senior CJN majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

Credits:

4.00

Description:

Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

Term:

Offered Spring Term

• CJN-510 Independent Study

Prerequisites:

An independent study form must be submitted to the CAS Dean's Office.

Credits:

1.00-12.00

Description:

An independent study experience in Communication and Journalism is available prior to the start of each semester.

Term:

Offered Both Fall and Spring

• CJN-2277 Public Relations I: Principles

Credits:

4.00

Description:

Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

Term:
• CJN-2355 Production I

Prerequisites:
CJN-152

Credits:
4.00

Description:
Practical exposure to methods of production and production equipment of the media. Students are introduced to basic theoretical concepts, such as three-point lighting and white balancing, and apply those to their productions. Students create a variety of non-fiction videos in teams and/or by themselves.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

• CJN-3376 Public Relations II: Research

Prerequisites:
CJN-2277 (Formerly CJN-277)

Credits:
4.00

Description:
Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:
Offered Both Fall and Spring

• CJN-3377 Public Relations III: Strategic Writing

Prerequisites:
CJN-2277 (formerly CJN-277);
Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:
Offered Both Fall and Spring

• **CJN-3455 Production II**

  Prerequisites:
  CJN-2355(formerly CJN-355)

  Credits:
  4.00

  Description:
  Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

  Term:
  Offered Both Fall and Spring

• **CJN-4455 Production III**

  Prerequisites:
  CJN-3455(formerly CJN-455)

  Credits:
  4.00

  Description:
  Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

  Term:
• CJN-4477 Public Relations IV: Campaigns

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• CJN-H4477 Public Relations IV Honors: Campaigns

Prerequisites:

CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

Credits:

4.00

Description:

Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides honors students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

Term:

Offered Spring Term

Type:

2016-2017 Archived Catalog Information

Latin American & Caribbean Studies

The Latin American & Caribbean Studies major seeks to develop a deeper understanding of the peoples and cultures of our Latin American and Caribbean neighbors. Through a multidisciplinary major in the humanities and social sciences, students will be prepared to pursue their post-graduate interests in international organizations, education, business, government, communication, and journalism.

Demonstrated proficiency in Spanish beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course. For native speakers and in the case where the student’s area of interest is better served by knowledge of another language (e.g., Portuguese or French), proficiency will be determined by an examination administered by the World Languages & Cultural Studies Department.

Students may major or minor in Latin American & Caribbean Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements
- Honors
- Latin American & Caribbean Studies Courses

Major Requirements: 10 courses, 40 credits

Core Requirements (5 courses, 20 credits)

- GVT-281 Intro to Comparative Politics

  Prerequisites:

  GVT 110, GVT 115, and GVT 120 or consent of instructor; Sophomore status or higher

  Credits:

  4.00

  Description:

  This course examines various methods of comparing political systems. Institutions such as executive departments, legislatures, court systems and local governmental systems are examined comparatively. It includes analysis of the impact of different economic systems on political/governmental institutions, and on economic circumstances that impact government. It also looks at political socialization both in terms of process and
HST-276 History of Modern Latin America

Credits:
4.00

Description:
The development of Latin American states: society, economy and culture, from colonial origins to the present.
Cultural Diversity B

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

Choose one of the following Sociology courses:

SOC-227 Race in American Society

Credits:
4.00

Description:
Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

Term:
Occasional

Type:
Cultural Diversity Opt A, Diverse Perspectives, Cultural Diversity Opt B
• SOC-228 Cultural, Global and Social Perspectives

Credits:
4.00

Description:
Enables students to examine, as well as develop an awareness and appreciation of, diversity within today's society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

Term:
Occasional

Type:
Cultural Diversity Opt A,Diverse Perspectives

Choose one of the following Economics courses:

• EC-141 Development Economics

Credits:
4.00

Description:
Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth? These questions are addressed by looking at domestic factors (government policies, resource endowments) as well as the international environment (mobile investors, international financial institutions). Asks what economic choices these countries face now. Normally offered yearly. Cultural Diversity B

Type:
Cultural Diversity Opt B,Social Science,Asian Studies,BSJ SOCIAL SCIENCE,Diverse Perspectives

• EC-151 Economic & Human Geography

Credits:
4.00

Description:
The study of how economic and human activity is distributed across space, the reasons for these spatial distributions, and the processes that change the spatial organization of economic activity over time. Topics include: maps, map projections, and geographic information systems; population geography; the organization and location of cities, towns and villages; transportation and communication policy; industrial location; the geography
of world trade; and geographic features of economic development. The course takes a global perspective, and draws on cases and examples from all over the world. Cultural Diversity B

Choose one of the following Spanish courses:

- **SPAN-302 Indigenous and Colonial Latin America**
  
  **Prerequisites:**
  
  Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.
  
  **Term:**
  
  Alternates Fall & Spring

  Social Science, BSJ SOCIAL SCIENCE
• GVT-387 Conflict & Development in Asia Service Abroad

Prerequisites:
GVT 281 or instructor's consent. Junior status or above

Credits:
4.00

Description:
current political trends in the Caribbean and in selected Central American nations. Emphasis will be placed on comparative analysis of public policies in the region, as well as on external factors which impact on politics in the Caribbean and Central America. Students will use academic sources in their analysis, as well as novels and other literary sources for the background of their analysis. Not open to freshmen. Normally offered every third year.

Type:
Cultural Diversity B

• GVT-393 Latin American Politics Today

Prerequisites:
GVT 281 or instructor consent

Credits:
4.00

Description:
This course examines the evolution of Latin America in the context of globalization. The first part analyzes the main political and economic trends of Latin America as a region, while the second presents the main challenges Mexico is facing today in the area of security. The third part moves forward into the detailed explanation of the transformations of the largest South American countries such as Colombia, Argentina, Chile and Venezuela, among others. The final section looks at the relationship between Latin America and the United States.

Type:
Cultural Diversity Opt B, Social Science

• GVT-466 Governance & Regional Political Economy

Prerequisites:
Junior Status required

Credits:
Description:

This course examines the intertwined nature of the globalization and regionalization processes from the perspective of global political economy. The first part of the course provides the basic elements and indicators to understand the main challenges the international economy is facing such as crisis, protectionism, and underdevelopment, inter alia. The second part presents the evolution of globalization and regionalism in the past decades. The third and final section compares how the distinct regions in the world are dealing with local and global problems; particularly attention is paid to the European Union, NAFTA, Mercosur and APEC.

Type:

Social Science

- **GVT-469 International Human Rights**

  Prerequisites:

  GVT 261 Junior status or above

  Credits:

  4.00

  Description:

  An examination of human rights at the end of the 20th century. Attention will be given to the origin and expansion of the concept of human rights in different political systems, the links between culture and human rights and the means and mechanisms for safeguarding human rights with particular reference to the United Nations system.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **HST-377 Caribbean and Latin-American Diaspora**

  Credits:
  4.00

  Description:

  A look at the migration of people, along with their culture, to and from the Caribbean and Latin America. The first half of the course looks at how European, Asian and African diasporas settled in the region, assimilated and contributed to the ethnic and cultural base of Caribbean and Latin America countries in the colonial period. The second half offers insight into how and why people from the Caribbean and Latin America would later form diasporas of their own in countries like the United States in the twentieth century. Students taking this course will get a sense of the struggles, accomplishments and culture of Caribbean and Latin American peoples in the United States. Formerly HST 286.

  Term:
  Occasional
• HST-396 The African Diaspora

Credits:
4.00

Description:
Examines the global dispersion of African people outside of the African continent. The history and culture of African descendant people and their communities in the Americas, Europe, and Asia will be included.

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities & History, Cultural Diversity Opt A

• HST-441 Social Movements in the Caribbean

Credits:
4.00

Description:
A case-study approach to studying the various means by which people in the Caribbean sought to overcome the legacies of colonial exploitation of their land, labor and resources. The course also offers lessons from the case-studies for approaching/achieving positive social change. Students will learn about the people's struggles to improve their social lives, reduce poverty, access land, expand human rights, reduce illiteracy, and gain accountability from their governments through violent and non-violent means.

Term:
Occasional

Type:
Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE

Latin American & Caribbean Studies

• FR-205 The Francophone World

Prerequisites:
FR 202 or Instructor's consent
Credits:
4.00

Description:
Explores the francophone world through the study of short stories, print media, and film, by engaging with the rich textured and diverse francophone literary canon. Teaches advance notions of French grammar, write compositions, and the art of conversation related to cultural themes.

Term:
Alternates Fall & Spring

Type:
Cultural Diversity Opt B, BA FOREIGN, Diverse Perspectives

- **SPAN-315 Business Spanish**

  Prerequisites:
  
  SPAN 290 or SPAN 300 or Instructor's consent.

  Credits:
  4.00

  Description:
  Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

  Type:
  Diverse Perspectives, Global Engagement Experience

- **SPAN-390 Introduction to Latin American and Caribbean Literature**

  Prerequisites:
  
  SPAN 300; SPAN 302 is strongly recommended

  Credits:
  4.00

  Description:
  Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism,
the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN

• SPAN-405 Women's Voices in Latin America

Prerequisites:
SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:
4.00

Description:
Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:
• **SPAN-407 Latin American Short Narrative**

  **Prerequisites:**

  Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

  **Credits:**

  4.00

  **Description:**

  Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

  **Term:**

  Occasional

• **SPAN-408 Latin American Cinema**

  **Prerequisites:**

  Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

  **Credits:**

  4.00

  **Description:**

  Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

  **Term:**

  Occasional
• SPAN-416 Border Crossings the Latino Experience in the USA

Prerequisites:
ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:
4.00

Description:
Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities Literature Requirement

• SPAN-418 Through the Eyes of the Storyteller / Latin American Fiction and Film

Prerequisites:
ENG 102 or ENG 103 or Instructor's consent. SPAN 300 and SPAN 302 are strongly recommended for Spanish and Latin American and Caribbean Studies majors and minors.

Credits:
4.00

Description:
Examines the intersection between literature and film and the relationships between the written word and the cinematic image. The writers and cinematographers studied represent mainstream as well as marginal voices that address issues of race, gender, sexual orientation and socio-economic class in South America, the Caribbean, and Mexico.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Latin American & Caribbean Studies

The Latin American & Caribbean Studies major seeks to develop a deeper understanding of the peoples and cultures of our Latin American and Caribbean neighbors. Through a multidisciplinary major in the humanities and social sciences, students will be prepared to pursue their post-graduate interests in international organizations, education, business, government, communication, and journalism.

Demonstrated proficiency in Spanish beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course. For native speakers and in the case where the student’s area of interest is better served by knowledge of another language (e.g., Portuguese or French), proficiency will be determined by an examination administered by the World Languages & Cultural Studies Department.

Students may major or minor in Latin American & Caribbean Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Latin American & Caribbean Studies Courses

Minor Requirements: 6 courses, 24 credits

Prerequisite

Demonstrated proficiency of Spanish, Portuguese, or French beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course.

The minor in Latin American & Caribbean Studies requires six courses (24 credits) of combined interdisciplinary study.

Students must take at least one course from the following disciplines: Government, Latin American & Caribbean Studies, and History.

Students must take three additional courses, which may include but are not restricted to related interdisciplinary fields: Communication & Journalism, Economics, and Sociology.

See the Latin American & Caribbean Studies Major Requirements tab for the list of courses.
Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Latin American & Caribbean Studies

The Latin American & Caribbean Studies major seeks to develop a deeper understanding of the peoples and cultures of our Latin American and Caribbean neighbors. Through a multidisciplinary major in the humanities and social sciences, students will be prepared to pursue their post-graduate interests in international organizations, education, business, government, communication, and journalism.

Demonstrated proficiency in Spanish beyond the intermediate level is required. Normally this can be fulfilled by successful completion of one 300-level course. For native speakers and in the case where the student’s area of interest is better served by knowledge of another language (e.g., Portuguese or French), proficiency will be determined by an examination administered by the World Languages & Cultural Studies Department.

Students may major or minor in Latin American & Caribbean Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- LACS-408 Latin America Cinema

  Credits:

  4.00

  Description:

  A survey of films from Argentina, Mexico, Cuba, and other Latin American countries. Occasionally the course includes films produced in the United States that are directed by Hispanic filmmakers or that illustrate the significance of Hispanic culture in North America. Films in Spanish with English subtitles. All written assignments and class meetings are in English. Cultural Diversity B. Prerequisite: None. ENG102 or 103 are strongly recommended. Normally offered alternate years.

  Type:

  Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- LACS-416 Border Crossings: The Latino Experience USA
Prerequisites:

ENG-102 or ENG-103 or Instructor's consent.

Credits:

4.00

Description:

The myth of a singular Latino experience in the United States will be examined through a variety of genres including: prose, poetry music, film, and theatre. Issues of gender, racial, ethnic and social identity will be addressed as we study mainstream and marginal voices within the U.S. Latino Community. Among the writers read will be Sandra Cisneros, Junot Diaz, Julia Alvarez, Tato Laviera, and Esmeralda Santiago. All written assignments and class meetings are in English. Cultural Diversity A. Normally offered alternate years.

Mathematics with Actuarial Concentration

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Mathematics with Actuarial Concentration Major Requirements
- Mathematics with Actuarial Concentration Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

Major Requirements: 18 courses, 60 credits

Mathematics Requirements (10 courses, 34 credits)

- MATH-165 Calculus I

  Prerequisites:

  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

  Credits:

  4.00

  Description:

  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- MATH-166 Calculus II
Prerequisites:
MATH-164 or MATH-165 with a minimum grade of C

Credits:
4.00

Description:
Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

MATH-200 Modern Mathematics and Career Exploration

Prerequisites:
Freshman or Sophomore Status

Credits:
1.00

Description:
This one credit course aims to help freshmen and sophomore students form an idea of the scope of the vast and rapidly growing field of mathematics and the many career options, and begin to map out steps toward a potential career path. Mathematics is a diverse discipline that is constantly evolving. It ranges from applied mathematics (tailored to specific real world problems), to mathematical physics (which crafts the mathematical basis for the understanding of physical phenomena), to pure mathematics (which is studied for its intrinsic interest). As the study of such varied concepts as quantity, structure, space and change, mathematics has something for everyone; and valuable applications to many other fields, from business and finance to meteorology, chemistry, ecology and biology, among many others. This module aims to move beyond the foundational math generally taught in freshmen and sophomore year by presenting several areas of recent development and application. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include fractal geometry, number theory, algebraic geometry, and probability. Students will also be introduced to resources provided by national mathematical communities on mathematical career paths and backgrounds needed.

MATH-265 Calculus III

Prerequisites:
MATH 166 with grade of C or better

Credits:
4.00
Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-255 Probability and Statistics
  Prerequisites:
  MATH-165 or MATH-164 with a grade of C or better
  Credits: 4.00
  Description:
  Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

• MATH-290 Financial Mathematics I
  Prerequisites:
  MATH-166, 164 or 165 with a minimum grade of C
  Credits: 4.00
  Description:
  This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.
  Type: Expanded Classroom Requirement

• MATH-331 Introduction to Abstract Math
  Prerequisites:
this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **MATH-431 Linear Algebra**
  
  **Prerequisites:**
  
  Math 331 must have grade C or higher
  
  **Credits:**
  
  4.00
  
  **Description:**
  

- **MATH-462 Real Analysis**
  
  **Prerequisites:**
  
  MATH 331 with at least a grade of C
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform continuity, pointwise and uniform convergence of functions, and an introduction to metric spaces.
MATH-511 Launching a Career in Mathematics

Prerequisites:

Junior or Senior standing

Credits:

1.00

Description:

This team-taught course is designed to explore career opportunities in Mathematics in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

Complementary Major Requirements (8 courses, 26 credits)

- **ACCT-201 Accounting for Decision Making I**
  
  Prerequisites:
  
  MATH-128 or higher and WRI-102 or WRI-H103 or SBS-220
  
  Credits:
  
  3.00
  
  Description:
  
  Introduces students to the accounting cycle, the financial statements, and the theory underlying accounting as information. Provides users of accounting information with a basic understanding of how to appraise and manage a business. Addresses current accounting topics, including relevant ethical and international issues found in the financial press.
  
  Term:
  
  Offered Both Fall and Spring
  
  Type:
  
  Arts Admin Minor Elective

- **ACCT-202 Accounting for Decision Making II**
  
  Prerequisites:
  
  ACCT-201
  
  Credits:
3.00

Description:

Enables students to apply the concepts and skills from ACCT 201. They learn how to analyze the financial condition and performance of a firm, and how to use accounting information in business planning, decision-making, and control. Topics include cost-volume-profit analysis, costing systems, variance analysis, and the budget process. Discusses relevant current ethical and competitive issues found in the financial press.

Term:

Offered Both Fall and Spring

- **CMPSC-F131 Computer Science I**

  Credits:

  4.00

  Description:

  This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

  Type:

  Quantitative Reasoning

- **EC-101 Applied Microeconomics**

  Prerequisites:

  Non CAS majors need to have completed at least 15 credits.

  Credits:

  3.00

  Description:

  This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

  Type:

  Social Science,BSJ SOCIAL SCIENCE
EC-102 Global Macroeconomics

Prerequisites:

Non-CAS majors need to have completed at least 15 credits

Credits:

3.00

Description:

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science,BSJ SOCIAL SCIENCE

EC-450 Applied Econometrics

Prerequisites:

STATS-250 or STATS-240 or MATH-255 or permission of instructor

Credits:

4.00

Description:

This course begins with a brief review of statistical methods, including probability theory, estimation, and hypothesis testing. This background is used in the construction, estimation, and testing of econometric models. The consequences of a misspecified model, where the assumptions of a classical regression model are violated, are studied and the appropriate remedial measures are suggested. Other topics include dummy variables, binary choice models, and autoregressive models. Emphasis is on applied aspects of econometric modeling. There is extensive use of statistical software for data analyses. Normally offered every year.

Type:

Social Science,BSJ SOCIAL SCIENCE

FIN-200 Business Finance

Prerequisites:
MATH 128 or higher; ACCT 201; STATS 240 or STATS 250 (can take concurrently with FIN 200); Sophomore standing

Credits:
3.00

Description:
This course is a study of the functions of business finance and focuses on basic financial principles such as time value of money, risk and return tradeoffs, and asset valuation. Formally FIN 310.

Term:
Offered Both Fall and Spring

Choose one of the following Finance courses:

- **FIN-311 Intermediate Finance**
  
  Prerequisites:
  
  FIN 200 (formerly FIN 310)
  
  Credits:
  3.00
  
  Description:
  Intermediate Finance expands on basic financial concepts and introduces more advanced topics. Material emphasizes solutions to problems of capital structure, investment and financing. Other major topics include distribution policy, working capital management, derivative corporate securities, and corporate restructuring.

  Term:
  Offered Both Fall and Spring

- **FIN-313 General Insurance**
  
  Prerequisites:
  
  FIN 200 (formerly FIN 310); Junior standing
  
  Credits:
  3.00
  
  Description:
  This course includes the theory, practice and problems of risk bearing in business and personal pursuits including life, property and casualty insurance and dealing with contract analysis and investments as well as corporate risk management.
• FIN-315 Principles of Investments

Prerequisites:
FIN 200 (formerly FIN 310); Junior standing

Credits:
3.00

Description:
This course covers the investment of funds by individuals and institutions. Focuses on analysis of investments and security markets, and the mechanics of trading and investing. A variety of investment vehicles are discussed, including stocks, bonds, futures, and options.

Term:
Offered Both Fall and Spring

• FIN-411 Futures and Options

Prerequisites:
FIN 315; Junior standing;

Credits:
3.00

Description:
This course is an in-depth analysis of derivatives: futures, options, and swaps. The course explains why these securities exist, where and how they are traded, how to employ them in managing risk, and how to accurately price them. It also covers the use of these derivatives in the context hedging or speculation.

Term:
Offered Spring Term

• FIN-413 Investment Analysis and Portfolio Management

Prerequisites:
FIN 315, Junior standing

Credits:
Description:

This course is an advanced course in investment analysis stressing efficient frontier and diversification. Also studies portfolio construction and management, and the tradeoff of risk versus return.

Term:

Offered Fall Term

Although not required, it is strongly recommended that Applied Mathematics majors also take CMPSC-F132 Computer Science II and an internship in Mathematics.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Mathematics with Actuarial Concentration

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Mathematics with Actuarial Concentration Major Requirements

Mathematics with Actuarial Concentration

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Mathematics with Actuarial Concentration Major Requirements
- Mathematics with Actuarial Concentration Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

In both the Pure Mathematics and Mathematics with Actuarial Concentration majors, students who have an overall GPA of 3.0 or better and a GPA of 3.0 or better in the major will be eligible for honors. To achieve honors a student must take a course of four credits or more in an advanced mathematics topic. This will typically be an independent study. The course should lead to a project or a senior thesis, done under the direction of a faculty member. The topic of study will be agreed upon by the student and faculty member.

Choose one of the following:

- **MATH-400 Senior Project in Mathematics**
  Prerequisites:
  Instructor permission required.
  Credits:
  4.00
  Description:
  Students study a particular topic in mathematics and demonstrate their results in a final project.

- **MATH-510 Independent Study**
  Credits:
Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

- Mathematics with Actuarial Concentration Major Requirements
- Mathematics with Actuarial Concentration Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

- MATH-000 Mathshop - Bridge to College Math

Credits:
0.00

Description:
A NON-CREDIT, full semester workshop designed for students who need substantial review before starting MATH 104, MATH 106, OR MATH 121. Similar to a course, MATHSHOP meets three hours per week throughout the semester. Topics covered are tailored to the needs of students and include basic math material, basic algebra, graphing use of calculators, ways of dealing with math fears and study methods. Several sections normally offered each semester.

- MATH-075 Review of Math Concepts for Calculus

Credits:
0.00

Description:
The purpose of this non-credit course is to help engineering students review basic math contents and topics that will be used frequently in their major engineering courses. The course will cover basic algebra (for example, order of operations, exponents, simplifying algebraic expressions, combinations of operations and complex fractions), functions and graphs (including linear, polynomial, and rational, exponential and logarithmic functions) and basic
knowledge in trigonometric functions (for example angles and radian measures, right triangle trigonometry, graphs of Sine and Cosine functions)

• MATH-104 Precalculus for Management & Social Sciences

Prerequisites:

MATH level 2 or Mathshop

Credits:

4.00

Description:

A selection of topics in algebra and elementary analytic geometry including, (but not restricted to): properties of real numbers, linear equations and inequalities, absolute value equations and inequalities, polynomials, rational expressions, exponents and radicals, quadratic equations, functions, linear, quadratic and polynomial models, rational, exponential and logarithmic functions. Applications and graphs are stressed throughout the course. This course is intended to prepare students who have only had one year of high school algebra to take MATH 134. Students may not use this course alone to satisfy the C.A.S. math requirement. Qualifying math placement exam score required. Students who are not prepared for this course should take MATHSHOP. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

• MATH-121 Precalculus With Elements of Calculus

Prerequisites:

MATH-104 with a minimum grade of B or MATH level 4

Credits:

4.00

Description:

A review of topics in algebra, trigonometry and analytic geometry intended for students needing one additional semester of preparation before taking MATH 165. Students may not use this course alone to satisfy the CAS math requirement. Prerequisites: MATH 104 with B or MATH 108 with B or higher or qualifying placement exam score indicating solid grounding in intermediate algebra. 4 lecture hours plus 1 recitation session per week. Normally offered every semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

• MATH-128 Math for the Modern World

Prerequisites:

MATH level 2, or Mathshop, or MATH-104
From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

**MATH-130 Topics in Finite Mathematics**

**Prerequisites:**

MATH-104, or MATH-121, or MATH level 3

**Credits:**

4.00

**Description:**

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

**MATH-132 Math-Art, Tool and Human Side**

**Prerequisites:**

MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.

**Credits:**

4.00

**Description:**

Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students’ mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks,
consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

- **MATH-134 Calculus for Management & Social Sciences**
  
  **Prerequisites:**
  
  MATH-104, MATH-121 or MATH level 4
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-164 Calculus 1 Bridge With Trigonometry**
  
  **Prerequisites:**
  
  Permission of Instructor
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**
Prerequisites:
MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:
4.00

Description:
Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-166 Calculus II

Prerequisites:
MATH-164 or MATH-165 with a minimum grade of C

Credits:
4.00

Description:
Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-200 Modern Mathematics and Career Exploration

Prerequisites:
Freshman or Sophomore Status

Credits:
1.00

Description:
This one credit course aims to help freshmen and sophomore students form an idea of the scope of the vast and rapidly growing field of mathematics and the many career options, and begin to map out steps toward a potential career path. Mathematics is a diverse discipline that is constantly evolving. It ranges from applied mathematics (tailored to specific real world problems), to mathematical physics (which crafts the mathematical basis for the understanding of physical phenomena), to pure mathematics (which is studied for its intrinsic interest). As the
study of such varied concepts as quantity, structure, space and change, mathematics has something for everyone; and valuable applications to many other fields, from business and finance to meteorology, chemistry, ecology and biology, among many others. This module aims to move beyond the foundational math generally taught in freshmen and sophomore year by presenting several areas of recent development and application. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include fractal geometry, number theory, algebraic geometry, and probability. Students will also be introduced to resources provided by national mathematical communities on mathematical career paths and backgrounds needed.

- **MATH-255 Probability and Statistics**

  Prerequisites:

  MATH-165 or MATH-164 with a grade of C or better

  Credits:

  4.00

  Description:

  Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-256 Statistics With R**

  Prerequisites:

  MATH 255 or permission of instructor

  Credits:

  1.00

  Description:

  The course uses free software R to introduce key concepts in statistics. Topics include Descriptive statistics and graphics, One- and two-sample tests, Regression and correlation, and Analysis of variance. Data from financial markets or computer networks will be used for homework assignments and projects. We will focus on hands on experiences with R rather than theoretical details about statistical analysis.

- **MATH-265 Calculus III**

  Prerequisites:

  MATH 166 with grade of C or better

  Credits:
4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- MATH-285 Discrete Mathematics

Prerequisites:

MATH-164 or MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- MATH-290 Financial Mathematics I

Prerequisites:

MATH-166, 164 or 165 with a minimum grade of C

Credits:

4.00

Description:

This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.

Type:

Expanded Classroom Requirement
• MATH-331 Introduction to Abstract Math

Prerequisites:

MATH-166 minimum grade of C

Credits:

4.00

Description:

This course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

• MATH-373 Ordinary Differential Equations

Prerequisites:

MATH-265 (may be taken concurrently)

Credits:

4.00

Description:

A first course in differential equations. Topics generally include separable, homogenous, exact, and linear first order differential equations; variations of parameters, differential operators, the Laplace transform, inverse transforms, systems of differential equations, power series solutions, Fourier series, and applications.

• MATH-400 Senior Project in Mathematics

Prerequisites:

Instructor permission required.

Credits:

4.00

Description:

Students study a particular topic in mathematics and demonstrate their results in a final project.

• MATH-431 Linear Algebra
Prerequisites:

Math 331 must have grade C or higher

Credits:

4.00

Description:

- **MATH-432 Abstract Algebra**

  Prerequisites:

  MATH 431

  Credits:

  4.00

  Description:

  An introduction to elementary group theory, including properties of groups, subgroups, first isomorphism theorem for groups, normal subgroups, finite group classification; elementary properties of rings, such as homomorphisms of rings, ideals, fields, Euclidean algorithm, rings of polynomials, factorization theory, integral domains, associates, primes and units in domains, and other topics in number theory. Prerequisite: MATH 431 with a grade of C or higher.

- **MATH-462 Real Analysis**

  Prerequisites:

  MATH 331 with at least a grade of C

  Credits:

  4.00

  Description:

  A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano- Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform continuity, pointwise and uniform convergence of functions, and an introduction to metric spaces.
• MATH-481 Complex Analysis I

Prerequisites:

MATH 462

Credits:

4.00

Description:

Construction and properties of complex numbers, calculus in the complex plane, analytic functions, contour integrals and the basics of Cauchy theory, power series representations. Prerequisite: MATH 331 or instructor's consent.

• MATH-510 Independent Study

Credits:

4.00

Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

• MATH-511 Launching a Career in Mathematics

Prerequisites:

Junior or Senior standing

Credits:

1.00

Description:

This team-taught course is designed to explore career opportunities in Mathematics in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

• MATH-R104 Recitation for Pre-Calculus for Management and Social Sciences

Prerequisites:

Appropriate Math Placement Exam score. Must be taken concurrently with MATH 104
Taken simultaneously with Math 104. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do online work such as lecture demonstration of additional examples or homework projects.

- **MATH-R128 Recitation for Math for the Modern World**
  
  **Prerequisites:**
  
  MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 128. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

  **Credits:**
  
  0.00

  **Description:**
  
  Hands on problem solving, discussion and examples of Math for the Modern World.

- **MATH-R130 Recitation for Finite Mathematics**

  **Prerequisites:**
  
  MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 130

  **Credits:**
  
  0.00

  **Description:**
  
  Taken simultaneously with Math 130. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do online work such as lecture demonstration of additional examples or homework projects.

- **MATH-R132 Recitation for Math-Art, Tool and Humanside**

  **Prerequisites:**
  
  MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 132. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.
Taken simultaneously with Math 132. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do online work such as lecture demonstration of additional examples or homework projects.

- **MATH-R134 Recitation for Calculus for Management And Social Sciences**

  **Prerequisites:**

  MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 134.

  **Credits:**

  0.00

  **Description:**

  Taken simultaneously with Math 134. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do online work such as lecture demonstration of additional examples or homework projects.
2016-2017 Archived Catalog Information
Mathematics with Actuarial Concentration

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Mathematics with Actuarial Concentration Major Requirements
- Mathematics with Actuarial Concentration Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

- STATS-240 Introduction to Statistics

  Prerequisites:

  Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

  Credits:

  4.00

  Description:

  Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

  Type:

  Quantitative Reasoning

- STATS-250 Applied Statistics

  Prerequisites:
MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

Credits:
4.00

Description:
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:
Quantitative Reasoning

- **STATS-H250 Honors Applied Statistics**

  Prerequisites:
  MATH-128, MATH 130, 134, 146, 164 or 165 and Honors Course; GPA of 3.3 or higher

  Credits:
  4.00

  Description:
  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

  Type:
  Quantitative Reasoning, Honors

- **STATS-350 Applied Statistical Methods**

  Prerequisites:
  STATS 250

  Credits:
  4.00
This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

- STATS-R240 Statistics Recitation

Credits:

0.00

Description:

This course is taken as a co-requisite to Stats240. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students work on individual and group homework.
2016-2017 Archived Catalog Information

Media & Film

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Media & Film Major Requirements
- Production Concentration
- Media & Film Minor Requirements
- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Major Requirements: 12 courses, 48 credits

Core Requirements (11 courses, 44 credits)

Note: All students should take CJN-101 and CJN-103 during their first year.

- **CJN-101 Introduction to Communication**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  As an introduction to the communication discipline, this course examines the significance of communication to the symbolic construction of meaning. Students receive an overview of multiple forms of communication, including face-to-face, verbal/non-verbal, small group, intercultural, organizational, and mediated communication. The class devotes attention to the influence of culture on communication and to ethical complexities relating to communication.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  - **CJN-103 Principles of Oral Communication**
    
    **Credits:**
Oral communication skills have been rated as vital to today's professional world. Students will learn these skills focusing on the three principal types of oral communication (interpersonal, team and public address). Sample assignments include creating a webinar, interviewing and team presentation. Specific attention will be given to communicating in diverse contexts, in an online environment, and for a diverse audience.

Term:
Offered Both Fall and Spring

Type:
Arts Admin Minor Elective

**CJN-152 Visual Aesthetics**

Prerequisites:
CJN Majors Only

Credits:
4.00

Description:
This course provides an introduction to a humanities approach to a range of media, including but not limited to film and television. The course helps students develop visual literacies, enriching their understanding of multiple forms of media. The class also explores how media texts are constructed for specific cultural, entertainment, informative and propaganda purposes.

Term:
Offered Both Fall and Spring

Type:
Vis. & Perform Thry & Hst

**CJN-255 Introduction to Media**

Credits:
4.00

Description:
An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.
Term: Offered Both Fall and Spring

Type: Social Science

- CJN-321 Research Methods in Communication

  Credits: 4.00

  Description:
  Students learn the research traditions in communication grounded in the humanities and social sciences. They are exposed to an array of qualitative methods, with in-depth study of select methodologies. Students learn how to read scholarly articles, write in an academic style, and design a research project.

  Term: Alternates Fall & Spring

- CJN-387 Media and Film Criticism

  Credits: 4.00

  Description:
  Examination of media including film, television, radio, music, newspapers, and magazines. Theories of media criticism are discussed and applied to specific media or media products. Students are introduced to criticisms such as genre, formalist, narrative, cultural, critical cultural, and feminist.

  Term: Offered Fall Term

- CJN-400 Media Effects and Audiences

  Prerequisites:
  Prerequisite: CJN-255

  Credits: 4.00

  Description:
Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

Term:
Offered Fall Term
Type:
Social Science

- CJN-466 Seminar in Media/Film

  Prerequisites:

  Senior standing required.

  Credits:

  4.00

  Description:

  Functions as a capstone media/film course and merges theoretical and practical knowledge from previous classes. Students revisit concepts and apply them to advanced courses and/or create their own advanced work.

  Term:

  Offered Spring Term

- CJN-2355 Production I

  Prerequisites:

  CJN-152

  Credits:

  4.00

  Description:

  Practical exposure to methods of production and production equipment of the media. Students are introduced to basic theoretical concepts, such as three-point lighting and white balancing, and apply those to their productions. Students create a variety of non-fiction videos in teams and/or by themselves.

  Term:

  Offered Both Fall and Spring

Type:

Expanded Classroom Requirement
• CJN-3455 Production II

Prerequisites:
CJN-2355(formerly CJN-355)

Credits:
4.00

Description:
Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:
Offered Both Fall and Spring

• CJN-4455 Production III

Prerequisites:
CJN-3455(formerly CJN-455)

Credits:
4.00

Description:
Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:
Offered Spring Term

Electives (1 course, 4 credits)

Choose one of the following:

• CJN-225 World Cinema

Credits:
4.00

Description:
An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:
Alternates Fall & Spring

Type:
Humanities & History, Cultural Diversity Opt B, Diverse Perspectives

- CJN-281 Asian Popular Culture

  Credits:
  4.00

  Description:
  Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

  Term:
  Occasional

- CJN-292 Film History: From Silent Cinema to the Modern Era

  Credits:
  4.00

  Description:
  An introductory film studies course that covers the history of the film medium from its birth until the 1970s. It provides an introduction to major film theory concepts, such as genre and/or auteur studies, as well as key films and stars in movie history.

  Term:
  Alternates Fall & Spring

  Type:
  Vis. & Perform Thry & Hst

- CJN-293 Hong Kong Cinema

  Credits:
  4.00
By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.

Term: Occasional

Type: Cultural Diversity Opt B, Diverse Perspectives

- **CJN-366 Great Film Directors**

  Credits: 4.00

  Description: An in-depth look at the films of one great film director, either American or foreign, demonstrating how the filmmaker develops his/her themes over the course of a career. Can be taken for credit more than once, but only counts once towards the major. A different director is studied each time.

  Term: Occasional

  Type: Humanities & History

- **CJN-381 Business of Media**

  Prerequisites: CJN-255

  Credits: 4.00

  Description: Explores the market environment of the production and distribution of video and film. Topics include ownership and control, market structure and competition, audience measurement, and the impact of new technologies on media markets. Students work on a proposal to launch a media company.

  Term: Alternates Fall & Spring
Type:
Arts Admin Minor Elective

• CJN-385 Globalization of Media and Telecommunications

  Credits:
  4.00

  Description:
  A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

  Term:
  Offered Spring Term

  Type:
  Cultural Diversity Opt B, BSBA SOCIAL CHANGE, Diverse Perspectives

• CJN-401 Networked Culture

  Credits:
  4.00

  Description:
  Explores the influence of media convergence, digital technologies, and networked culture on the production, distribution, and consumption of media texts. Through theory, analysis and practice, students learn broad conceptual frameworks and develop models about the emergence and evolution of digital and mobile communication technologies that have shaped the contemporary media landscape. Case studies are drawn from media industries including journalism, advertising, public relations, film and television, music, video games, and the arts.

  Term:
  Occasional

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Media & Film

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Media & Film Major Requirements
- Production Concentration
- Media & Film Minor Requirements
- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Production Concentration: 4 courses, 16 credits

Note: This concentration is available only to Media & Film majors. This concentration requires the following prerequisites: CJN-152 and CJN-2355 (formerly CJN-355).

Production Strategies and Skills (2 courses, 8 credits)

Choose two of the following:

- **CJN-354 Digital Cinema**

  Credits:
  
  4.00

  Description:

  Students study cinematography techniques and theory, putting them into practical application in various projects using video cameras, lighting, and composition to create images and scenes. Students produce work in multiple environments including stage and on-location shoots.

  Term:

  Occasional

- **CJN-356 TV Studio Production**

  Credits:
Description:

Provides students with a hands-on introduction to the process of planning, preparing, producing, and evaluating studio productions. Students are exposed to the elements and terminology of a multi-camera studio with live switching, audio mixing, and studio lighting. Students produce interviews, public service announcements, and a live variety/talk show.

Term:

Offered Both Fall and Spring

- CJN-357 Post Production

  Credits:

  4.00

  Description:

  An exploration into the activities that wrap up the creation of films and television programs. Students create and add motion-graphics and visual effects to edited programs, generating output for videotape, the web, and DVD platforms.

  Term:

  Occasional

- CJN-390 Screenwriting

  Credits:

  4.00

  Description:

  Students learn the basic principles of writing a short film for the screen by examining professional scripts and one-act films, and then creating, step-by-step, their own one-act screenplay so that it could be ready for production.

  Term:

  Occasional

- CJN-3455 Production II

  Prerequisites:

  CJN-2355(formerly CJN-355)

  Credits:
Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:
Offered Both Fall and Spring

Production Practica (2 courses, 8 credits)

Choose two of the following:

- **CJN-480 Documentary Film Production**
  
  **Credits:**
  4.00
  
  **Description:**
  Students analyze contemporary documentaries and study documentary history and theory. Working in teams, students produce, write, direct, crew, and edit documentary shorts.
  
  **Term:**
  Occasional

- **CJN-481 Making the Short Film**
  
  **Credits:**
  4.00
  
  **Description:**
  This advanced class works together as a crew to create a short narrative film shot in HD video. Students learn the process of making professional-quality work, and each student is responsible for various crew positions during pre-production and the shooting of the film.
  
  **Term:**
  Occasional

- **CJN-483 Suffolk TV News**
  
  **Prerequisites:**
  CJN-253 and CJN-2355(formerly CJN-355) and CJN-353 or CJN-361 or instructor's consent
Credits:
4.00

Description:

Students write, direct, crew, edit, and serve as talent in producing the CJN Department's weekly news program aired on Boston Cable Access. Cannot be taken concurrently with CJN 361 or CJN 353.

Term:
Offered Spring Term

- **CJN-490 Temple Street Project**

  Prerequisites:

  CJN-253 and CJN-2355(formerly CJN-355)

  Credits:

  4.00

  Description:

  Students write, direct, crew, edit, and serve as talent in producing the CJN Department's magazine-format television program aired on the department's Youtube channel.

  Term:

  Offered Fall Term
2016-2017 Archived Catalog Information

Media & Film

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Media & Film Major Requirements
- Production Concentration
- Media & Film Minor Requirements
- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Minor Requirements: 5 courses, 20 credits

- **CJN-255 Introduction to Media**

  Credits:

  4.00

  Description:

  An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

  Term:

  Offered Both Fall and Spring

  Type:

  Social Science

- **CJN-387 Media and Film Criticism**

  Credits:

  4.00
Examination of media including film, television, radio, music, newspapers, and magazines. Theories of media criticism are discussed and applied to specific media or media products. Students are introduced to criticisms such as genre, formalist, narrative, cultural, critical cultural, and feminist.

Term:
Offered Fall Term

**CJN-400 Media Effects and Audiences**

Prerequisites:

Prerequisite: CJN-255

Credits:

4.00

Description:

Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.

Term:
Offered Fall Term

Type:
Social Science

Choose one of the following:

**CJN-225 World Cinema**

Credits:

4.00

Description:

An introductory course in film studies with a focus on foreign films. Movies studied include masterpieces of cinema from Europe, Asia, the Middle East, and other nations (Films have subtitles).

Term:
Alternates Fall & Spring

Type:
• CJN-292 Film History: From Silent Cinema to the Modern Era

Credits:

4.00

Description:

An introductory film studies course that covers the history of the film medium from its birth until the 1970s. It provides an introduction to major film theory concepts, such as genre and/or auteur studies, as well as key films and stars in movie history.

Term:

Alternates Fall & Spring

Type:

Vis. & Perform Thry & Hst

Choose one of the following:

• CJN-281 Asian Popular Culture

Credits:

4.00

Description:

Students critically analyze Asian popular culture since the 1980s using a cultural ethnographic approach. Students apply the lenses of gender, identity, globalization, and business strategies to examine pop phenomena such as Korean Wave, Cool Japan, and Cantonese popular music.

Term:

Occasional

• CJN-293 Hong Kong Cinema

Credits:

4.00

Description:

By examining the film texts of Hong Kong auteurs such as John Woo, Wong Kar-wai, Tsui Hark, Andrew Lau, and Alan Mak, the course examines issues such as film genres, colonization/decolonization, transnational political economy, the Greater Chinese media market, and the diaspora.
CJN-366 Great Film Directors

Description:
An in-depth look at the films of one great film director, either American or foreign, demonstrating how the filmmaker develops his/her themes over the course of a career. Can be taken for credit more than once, but only counts once towards the major. A different director is studied each time.

CJN-381 Business of Media

Description:
Explores the market environment of the production and distribution of video and film. Topics include ownership and control, market structure and competition, audience measurement, and the impact of new technologies on media markets. Students work on a proposal to launch a media company.
- **CJN-385 Globalization of Media and Telecommunications**

  Credits:  
  4.00  

  Description:  
  A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

  Term:  
  Offered Spring Term

  Type:  
  Cultural Diversity Opt B, BSBA SOCIAL CHANGE, Diverse Perspectives

- **CJN-401 Networked Culture**

  Credits:  
  4.00  

  Description:  
  Explores the influence of media convergence, digital technologies, and networked culture on the production, distribution, and consumption of media texts. Through theory, analysis and practice, students learn broad conceptual frameworks and develop models about the emergence and evolution of digital and mobile communication technologies that have shaped the contemporary media landscape. Case studies are drawn from media industries including journalism, advertising, public relations, film and television, music, video games, and the arts.

  Term:  
  Occasional

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Media & Film Major Requirements
- Production Concentration
- Media & Film Minor Requirements
- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the departments of Communication & Journalism or Advertising, Public Relations, and Digital Media.

2. Student must also meet all requirements for the Master’s degree in Communication.

3. Students will take two Communication graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.

4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.

5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor’s degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

  **Term:**
  Occasional

- **CJN-400 Media Effects and Audiences**

  **Prerequisites:**
  Prerequisite: CJN-255

  **Credits:**
  4.00
  
  **Description:**
  Explores the social influence of the media on U.S. society. Attention is given to the theoretical perspectives that inform media research. By the end of the semester, students will develop a critical understanding of the role and influence of the media in U.S. society.
Offered Fall Term

Type:
Social Science

- **CJN-401 Networked Culture**

  Credits:
  4.00

  Description:
  Explores the influence of media convergence, digital technologies, and networked culture on the production, distribution, and consumption of media texts. Through theory, analysis and practice, students learn broad conceptual frameworks and develop models about the emergence and evolution of digital and mobile communication technologies that have shaped the contemporary media landscape. Case studies are drawn from media industries including journalism, advertising, public relations, film and television, music, video games, and the arts.

  Term:
  Occasional

- **CJN-403 Issues in Journalism**

  Prerequisites:
  CJN-112

  Credits:
  4.00

  Description:
  Each time this course is offered it examines a different issue in Journalism, such as social justice journalism, electronic journalism, ethics, political journalism, or international journalism.

  Term:
  Offered Fall Term

- **CJN-405 Communication Theory**

  Prerequisites:
  CJN Majors Only

  Credits:
4.00

Description:

Interdisciplinary examination of the development of communication theories from the classical tradition to the modern perspectives of rhetoricians, scientists, psychologists, sociologists, philosophers, and others.

Term:

Offered Both Fall and Spring

- **CJN-415 Review Writing**

  Credits:

  4.00

  Description:

  Analysis and critique of movies, theater, music, art, and food.

  Term:

  Offered Both Fall and Spring

- **CJN-421 Media Seminar**

  Prerequisites:

  Take CJN-255; CJN Majors with Senior Standing

  Credits:

  4.00

  Description:

  In an interactive and intensive seminar format, students examine special media topics through class discussion and engaging in original research. Topics may include: women, gender, and communication technologies; media and social movements; topics in cultural studies; media and democracy; media and community; and participatory media culture.

  Term:

  Offered Spring Term

- **CJN-437 Ad Campaigns**

  Prerequisites:

  CJN 359, CJN 257
Principles of advertising campaigns. Students design, plan, and produce a national advertising campaign for a client as members of a simulated agency team.

Term:
Offered Spring Term

- **CJN-440 Health Communication**

  Prerequisites:
  
  CJN-277;

  Credits:
  
  4.00

  Description:
  
  This course examines the important functions performed by human and mediated communication for health care consumers and providers. In particular, the course focuses on the use of communication strategies to inform and influence individual and community decisions regarding health.

  Term:
  Occasional

- **CJN-441 Risk and Crisis Communication**

  Prerequisites:
  
  CJN-2277 (formerly CJN-277)

  Credits:
  
  4.00

  Description:
  
  Provides students with insight into effective risk and crisis management within organizations, including health organizations. Focuses on the application of theories, strategies, and tactics from a public relations perspective. Students understand how communication can prevent, cause, accelerate, and assist in recovery from a crisis.

  Term:
  Occasional
- **CJN-442 Boston Sports Media**

  Credits:
  
  4.00

  Description:
  
  The history of Boston sports includes a rich media tradition that has been chronicled in various Boston sports media outlets. This course takes both an historic and contemporary approach to understanding and analyzing Boston sports media and their relationship to Boston college and professional sports.

  Term:
  
  Occasional

- **CJN-443 Advanced Reporting and Feature Writing**

  Credits:
  
  4.00

  Description:
  
  Principles and techniques of advanced news, features, and investigative reporting are studied and applied, with a focus on enterprise reporting. Students develop, organize and write detailed news and news-feature stories based on original research.

  Term:
  
  Offered Fall Term

- **CJN-444 Advanced Health Communication**

  Prerequisites:
  
  CJN-340

  Credits:
  
  4.00

  Description:
  
  Explores theory and research in the development of persuasive health campaigns in many contexts including social marketing. Examines aspects of health campaigns including formative research, audience segmentation, key message tailoring, and communication tools.

  Term:
  
  Occasional
• CJN-455 Advanced Media Production

Prerequisites:

CJN 355

Credits:

4.00

Description:

The course focus is on specialized production techniques including advanced lighting, sound recording, cinematography and editing techniques. Students work in teams to create a variety of fiction productions.

Term:

Offered Both Fall and Spring

• CJN-457 Integrated Marketing Communication

Prerequisites:

CJN-2277(formerly CJN-277)

Credits:

4.00

Description:

Examines the integration of advertising, promotion, public relations and marketing communication in the strategic communication process. By learning the fundamentals of interpersonal and persuasive communication, students have an opportunity to develop an effective communication plan for a brand that includes creative copy.

Term:

Offered Both Fall and Spring

Type:

Arts Admin Minor Elective

• CJN-458 Advanced Sports Public Relations

Prerequisites:

CJN-258

Credits:

4.00
Focuses on the theory and practice of effective sports public relations management including the development of sport, team, and league public relations campaigns. Also focuses on sports public relations in the context of stakeholder relations in sports.

Term:
Occasional

- **CJN-465 Film and Society**

  Credits:

  4.00

  Description:

  A study of how cinema reflects, and reflects on, the values of the society in which it is produced. The course features films and filmmakers who emphasize political and social issues dealing with race, gender, sexuality, and other important concerns.

  Term:

  Occasional

- **CJN-466 Seminar in Media/Film**

  Prerequisites:

  Senior standing required.

  Credits:

  4.00

  Description:

  Functions as a capstone media/film course and merges theoretical and practical knowledge from previous classes. Students revisit concepts and apply them to advanced courses and/or create their own advanced work.

  Term:

  Offered Spring Term

- **CJN-470 Rhetoric and Global Context**

  Prerequisites:

  CJN-216

  Credits:
Rhetoric is the strategic use of symbols to create meaning. Films, television, music, and new media communicate these meanings. Explores how rhetorical messages shape our personal and cultural identities. Topics include gender, social networking, food, politics, religion, and fashion.

Term:
Offered Fall Term

**CJN-477 Public Relations IV: Campaigns**

Prerequisites:
CJN-277 and CJN-377 and Senior Standing. This course is now being offered as CJN-4477

Credits:
4.00

Description:
Examines case studies and typical public relations problems experienced by profit and not-for-profit organizations. The course provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign for an actual client. Fulfills ECR requirement.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

**CJN-H477 Public Relations IV Honors: Campaigns**

Prerequisites:
CJN 277 and CJN 377; Over 84 credits and by invitation only;

Credits:
4.00

Description:
HONORS SECTION. INVITATION ONLY! Examines case studies and typical public relations problems experienced by profit and not-for-profit organizations. The course provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign for an actual client. Fulfills ECR requirement.
• CJN-479 Environmental Public Relations
  Credits: 4.00
  Description:
  Examines public issues involving the environment. Focuses on public relations strategies for government agencies, corporations, and other organizations concerned with the environment.
  Term: Occasional

• CJN-480 Documentary Film Production
  Credits: 4.00
  Description:
  Students analyze contemporary documentaries and study documentary history and theory. Working in teams, students produce, write, direct, crew, and edit documentary shorts.
  Term: Occasional

• CJN-481 Making the Short Film
  Credits: 4.00
  Description:
  This advanced class works together as a crew to create a short narrative film shot in HD video. Students learn the process of making professional-quality work, and each student is responsible for various crew positions during pre-production and the shooting of the film.
  Term: Occasional

• CJN-482 Cultural Theory and Practice Cultural Theory & Practice
Prerequisites:
CJN-216

Credits:
4.00

Description:
In a world of globalization and multiculturalism, communication is critical to understanding. Explores theoretical approaches to communication and applies them to specific contexts. Emerging trends in global, ethical, legal, political and social communication issues are explored.

Term:
Offered Spring Term

- **CJN-483 Suffolk TV News**

  Prerequisites:
  CJN-253 and CJN-2355(formerly CJN-355) and CJN-353 or CJN-361 or instructor's consent

  Credits:
  4.00

  Description:
  Students write, direct, crew, edit, and serve as talent in producing the CJN Department's weekly news program aired on Boston Cable Access. Cannot be taken concurrently with CJN 361 or CJN 353.

  Term:
  Offered Spring Term

- **CJN-485 Rhetoric of Protest & Reform**

  Credits:
  4.00

  Description:
  Examines the persuasive strategies of social reform movements with an emphasis on the civil rights', women's rights, and gay rights movements in the United States.

  Term:
  Alternates Fall & Spring

  Type:
• **CJN-488 Grant Writing**

Credits:

4.00

Description:

Hands-on course that explores the process of writing and submitting grants to foundations, associations, the government, and other grantors on behalf of nonprofit organizations. Students learn how to identify grant resources through research, compile an effective submission, and write supporting material such as cover letters and appendices. Also covers how grants are reviewed and tips for successful grant submissions.

Term:

Occasional

• **CJN-489 Political Communication**

Credits:

4.00

Description:

Examination of special circumstances created by politics and their impact on attempts at persuasion. Case studies of famous politicians' political campaigns are combined with discussions of current trends in media and politics.

Term:

Occasional

• **CJN-490 Temple Street Project**

Prerequisites:

CJN-253 and CJN-2355(formerly CJN-355)

Credits:

4.00

Description:

Students write, direct, crew, edit, and serve as talent in producing the CJN Department's magazine-format television program aired on the department's Youtube channel.

Term:
• CJN-491 Special Topics in Communications and Journalism

  Credits:
  4.00

  Description:
  Explores current issues in the field of communication.

  Term:
  Offered Both Fall and Spring

• CJN-492 Special Topics in Public Relations

  Credits:
  4.00

  Description:
  Explores current issues in public relations.

  Term:
  Occasional

• CJN-493 Special Topics in Film

  Credits:
  4.00

  Description:
  Explores film theory, history, criticism, and genre.

  Term:
  Occasional

• CJN-494 Special Topics in Advertising

  Credits:
  4.00

  Description:
Current issues in the field of advertising. Normally offered every semester.

Term:
Occasional

- **CJN-503 Experiential Learning in Communication**
  
  Prerequisites:
  
  16 Hrs of CJN coursework or CJN advisor consent
  
  Credits:
  
  1.00-12.00
  
  Description:
  Internships and practicum in Communication and Journalism are available prior to the start of each semester.

  Term:
  
  Offered Both Fall and Spring
  
  Type:
  
  Expanded Classroom Requirement

- **CJN-505 Communication and Journalism Practicum**
  
  Prerequisites:
  
  12 hours of CJN coursework and CJN advisor consent
  
  Credits:
  
  1.00-12.00
  
  Description:
  Practicum and internship projects are available prior to the start of each semester. Prerequisites: Journalism majors with a minimum of 12 credits of coursework or permission of the Department Chairperson. 1-3 terms : 1-12 credits.

  Term:
  
  Offered Both Fall and Spring
  
  Type:
  
  Expanded Classroom Requirement
- CJN-506 Honors Seminar

  Prerequisites:

  Senior CJN majors with an overall cumulative grade point average of 3.0, and a major GPA of 3.4

  Credits:

  4.00

  Description:

  Senior CJN majors meeting requirements for Departmental Honors are invited to participate in this seminar, which entails research and presentation of an approved topic.

  Term:

  Offered Spring Term

- CJN-510 Independent Study

  Prerequisites:

  An independent study form must be submitted to the CAS Dean's Office.

  Credits:

  1.00-12.00

  Description:

  An independent study experience in Communication and Journalism is available prior to the start of each semester.

  Term:

  Offered Both Fall and Spring

- CJN-2277 Public Relations I: Principles

  Credits:

  4.00

  Description:

  Effective public relations involve an understanding of the history, theory, and practice of public relations including public relations concepts, the role of the practitioner, and the foundations of public relations. This course seeks to provide that foundation as an introduction to the field of public relations. Issues surrounding the history, legality, process, and principles of public relations are explored.

  Term:
• CJN-2355 Production I

  Prerequisites:
  CJN-152

  Credits:
  4.00

  Description:
  Practical exposure to methods of production and production equipment of the media. Students are introduced to basic theoretical concepts, such as three-point lighting and white balancing, and apply those to their productions. Students create a variety of non-fiction videos in teams and/or by themselves.

  Term:
  Offered Both Fall and Spring

  Type:
  Expanded Classroom Requirement

• CJN-3376 Public Relations II: Research

  Prerequisites:
  CJN-2277 (Formerly CJN-277)

  Credits:
  4.00

  Description:
  Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

  Term:
  Offered Both Fall and Spring

• CJN-3377 Public Relations III: Strategic Writing

  Prerequisites:
  CJN-2277 (formerly CJN-277);
Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:
Offered Both Fall and Spring

**CJN-3455 Production II**

Prerequisites:
CJN-2355(formerly CJN-355)

Credits:
4.00

Description:
Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:
Offered Both Fall and Spring

**CJN-4455 Production III**

Prerequisites:
CJN-3455(formerly CJN-455)

Credits:
4.00

Description:
Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:
- **CJN-4477 Public Relations IV: Campaigns**

  **Prerequisites:**
  
  CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

  **Credits:**
  
  4.00

  **Description:**
  
  Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

  **Term:**
  
  Offered Both Fall and Spring

  **Type:**
  
  Expanded Classroom Requirement

- **CJN-H4477 Public Relations IV Honors: Campaigns**

  **Prerequisites:**
  
  CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

  **Credits:**
  
  4.00

  **Description:**
  
  Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides honors students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

  **Term:**
  
  Offered Spring Term

  **Type:**
  
  Expanded Classroom Requirement, Honors
2016-2017 Archived Catalog Information

Medical Dosimetry Certificate

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Requirements
- Medical Dosimetry Courses
- Gainful Employment Disclosure

Certificate Requirements: 19 courses and corresponding laboratories and clinical hours, 62 credits

Core Requirements (17 courses and corresponding laboratories where applicable, 54 credits)

- PHYS-206 Introduction to Radiation Oncology
  
  Prerequisites:
  
  Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

  Credits:

  4.00

  Description:

  This course will serve an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

  Term:

  Offered Fall Term

- PHYS-301 Clinical Radiation I
  
  Prerequisites:

  PHYS 206; Radiation Therapy & Medical Dosimetry Students Only
Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:
Offered Spring Term

**PHYS-302 Clinical Radiation II**

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
3.00

Description:
This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:
Offered Fall Term

**PHYS-L311 Medical Dosimetry Rotation I**

Prerequisites:
Medical Dosimetry Students Only

Credits:
1.00

Description:
Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two,8-hour days per week, TTH.

Term:
Offered Spring Term
• PHYS-L312 Medical Dosimetry Rotation II

Prerequisites:
Medical Dosimetry Students Only

Credits:
1.00

Description:
Under the supervision of a certified medical dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three 8-hour days per week, MWF.

Term:
Offered Fall Term

• PHYS-L313 Medical Dosimetry Rotation III

Prerequisites:
PHYS L312, Medical Dosimetry Students Only

Credits:
1.00

Description:
Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.

Term:
Offered Spring Term

• PHYS-L314 Medical Dosimetry Practicum

Prerequisites:
Take PHYS-301 and PHYS-L311; *Course fulfills the following: Expanded Classroom Requirement.

Credits:
1.00

Description:
Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical
dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:

Summer

Type:

Expanded Classroom Requirement

• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• PHYS-L315 Radiation Physics I Lab

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.
Term:
Offered Fall Term

Type:
Expanded Classroom Requirement

- **PHYS-317 Radiation Physics II**

  Prerequisites:
  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

  Credits:
  4.00

  Description:
  This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:
Offered Spring Term

- **PHYS-415 Dosimetry I**

  Prerequisites:
  PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

  Credits:
  3.00

  Description:
  This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:
Offered Spring Term

- **PHYS-L415 Dosimetry I Lab**
Prerequisites:
PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:
1.00

Description:
This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:
Offered Spring Term

- PHYS-416 Radiation Biology

Prerequisites:
PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

Credits:
4.00

Description:
Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:
Offered Spring Term

- PHYS-417 Dosimetry II

Prerequisites:
Medical Dosimetry Students Only

Credits:
4.00

Description:
This course is a continuation of Clinical Dosimetry I and will focus on advanced treatment planning techniques including intensity modulated radiation therapy (IMRT), arc therapy, stereotactic treatment planning, and proton therapy. The advantages of each technique/modality over conventional 3D-treatment planning will be discussed. This will also be contrasted against the specific challenges presented by each technique such as the need for better immobilization, need for 4D CT scanning and daily IGRT (kV matching and/or CBCT).

Term:
Offered Fall Term

• PHYS-420 Radiation Oncology & Pathology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:
Offered Fall Term

• PHYS-422 Radiology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.
• PHYS-435 Brachytherapy

Prerequisites:
Medical Dosimetry Students Only

Credits:
4.00

Description:
Topics in this course will include, radioactive sources, calibration, instrumentation, factors affecting dose calculations, definitions of LDR, MDR and HDR, treatment planning and clinical dose calculation, implantation techniques, implant localization/verification, regulations, radiation safety, storage and QA. Detailed coverage of prostate brachytherapy including LDR and HDR will be emphasized.

Term:
Offered Spring Term

• PHYS-450 Dosimetry Systems and Networking and Quality Assurance

Prerequisites:
Senior Status; Medical Dosimetry Students Only

Credits:
4.00

Description:
This course is designed for the medical dosimetry student, to include a general overview of computer systems and networking in the field of radiation oncology. A historical view of computers will be covered as well as the intricate uses in the medical field today. Oncology information systems such as MOSAIC and ARIA, as well as radiation therapy software used for imaging, contouring, treatment planning, and patient charting applications will be covered. Data and system security will also be addressed.

Term:
Offered Spring Term

• PHYS-476 Senior Seminar for Medical Dosimetry

Prerequisites:
Senior Status and Medical Dosimetry Students Only
This course will be available to second year clinical students enrolled in the Medical Dosimetry program. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in MDCB for Medical Dosimetry. Exam preparation will include the use of lectures, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**
  
  **Prerequisites:**
  
  BIO 111/L111
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.
  
  **Term:**
  
  Offered Fall Term
  
  **Type:**
  
  Quantitative Reasoning

- **STATS-250 Applied Statistics**
  
  **Prerequisites:**
  
  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)
  
  **Credits:**
  
  4.00
  
  **Description:**
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

**Type:**
Quantitative Reasoning

**PSYCH-215 Behavioral Statistics**

**Prerequisites:**
PSYCH 114; Restricted to majors only unless with permission of instructor.

**Credits:**
4.00

**Description:**
Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

**Term:**
Offered Both Fall and Spring

**Type:**
Quantitative Reasoning

**Ethics Requirement (1 course, 4 credits)**

Choose one of the following:

**PHIL-119 Ethics**

**Credits:**
4.00

**Description:**
A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.

**Term:**
Offered Both Fall and Spring
• PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-127 Contemporary Moral Issues

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.
Term:
Occasional

Required Clinical Hours:

14 hours per week; Semester 2, Year 1
40 hours per week; 13 week Summer Session
24 hours per week, Year 2

Note:

The department reserves the right to require the withdrawal of a student from the Medical Dosimetry certificate program if, in its estimation, the probability of the student's success is doubtful. Factors such as academic performance, interest, effort, professionalism, compliance, attendance, and suitability for the field will be considered. Issues or concerns correlated with any one of these factors could result in withdrawal of the student from the program. Students who defer entry into the program, for any reason, will forfeit their space in the program and will be required to reapply for the following year. A student may be dismissed from the Medical Dosimetry program if they fail to maintain the minimum cumulative GPA of 3.0 or if they achieve a final grade lower than "B" in any of the Medical Dosimetry courses listed above.

If admitted into the Medical Dosimetry program, part-time and full-time students must complete clinical requirements within three years of being admitted. Medical Dosimetry graduates may seek employment immediately following graduation and will also be eligible to apply for the Medical Dosimetry Certification Board (MDCB) Medical Dosimetry Certificate Exam.

PHYS-206 Introduction to Radiation Oncology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course will serve an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:
Offered Fall Term

PHYS-301 Clinical Radiation I

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:
3.00
Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:
Offered Spring Term

• PHYS-302 Clinical Radiation II

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
3.00

Description:
This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:
Offered Fall Term

• PHYS-L311 Medical Dosimetry Rotation I

Prerequisites:
Medical Dosimetry Students Only

Credits:
1.00

Description:
Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two,8-hour days per week, TTH.

Term:
Offered Spring Term

• PHYS-L312 Medical Dosimetry Rotation II

Prerequisites:
Medical Dosimetry Students Only

Credits:
1.00

Description:
Under the supervision of a certified medical dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three 8-hour days per week, MWF.

Term:
Offered Fall Term

• PHYS-L313 Medical Dosimetry Rotation III

  Prerequisites:
  
  PHYS L312, Medical Dosimetry Students Only

  Credits:
  1.00

  Description:
  Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.

  Term:
  Offered Spring Term

• PHYS-L314 Medical Dosimetry Practicum

  Prerequisites:
  
  Take PHYS-301 and PHYS-L311; *Course fulfills the following: Expanded Classroom Requirement.

  Credits:
  1.00

  Description:
  Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

  Term:
  Summer
• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• PHYS-L315 Radiation Physics I Lab

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:

Offered Fall Term

Type:
• PHYS-317 Radiation Physics II

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412.

Term:

Offered Spring Term

• PHYS-415 Dosimetry I

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:

Offered Spring Term

• PHYS-L415 Dosimetry I Lab

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:
Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

- **PHYS-416 Radiation Biology**

  Prerequisites:

  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

  Credits:

  4.00

  Description:

  Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

  Term:

  Offered Spring Term

- **PHYS-417 Dosimetry II**

  Prerequisites:

  Medical Dosimetry Students Only

  Credits:

  4.00

  Description:

  This course is a continuation of Clinical Dosimetry I and will focus on advanced treatment planning techniques including intensity modulated radiation therapy (IMRT), arc therapy, stereotactic treatment planning, and proton therapy. The advantages of each technique/modality over conventional 3D-treatment planning will be discussed. This will also be contrasted against the specific challenges presented by each technique such as the need for better immobilization, need for 4D CT scanning and daily IGRT (kV matching and/or CBCT).
• PHYS-420 Radiation Oncology & Pathology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:
Offered Fall Term

• PHYS-422 Radiology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:
Offered Fall Term

• PHYS-435 Brachytherapy
Prerequisites:
Medical Dosimetry Students Only

Credits:
4.00

Description:
Topics in this course will include, radioactive sources, calibration, instrumentation, factors affecting dose calculations, definitions of LDR, MDR and HDR, treatment planning and clinical dose calculation, implantation techniques, implant localization/verification, regulations, radiation safety, storage and QA. Detailed coverage of prostate brachytherapy including LDR and HDR will be emphasized.

Term:
Offered Spring Term

• PHYS-450 Dosimetry Systems and Networking and Quality Assurance

Prerequisites:
Senior Status; Medical Dosimetry Students Only

Credits:
4.00

Description:
This course is designed for the medical dosimetry student, to include a general overview of computer systems and networking in the field of radiation oncology. A historical view of computers will be covered as well as the intricate uses in the medical field today. Oncology information systems such as MOSAIC and ARIA, as well as radiation therapy software used for imaging, contouring, treatment planning, and patient charting applications will be covered. Data and system security will also be addressed.

Term:
Offered Spring Term

• PHYS-476 Senior Seminar for Medical Dosimetry

Prerequisites:
Senior Status and Medical Dosimetry Students Only

Credits:
4.00

Description:
This course will be available to second year clinical students enrolled in the Medical Dosimetry program. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in MDCB for Medical Dosimetry. Exam preparation will include the use of lectures, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Music History

The Music History major and Music History minor are available through the World Languages & Cultural Studies Department.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Music History Courses

Major Requirements: 12 courses, 39-42 credits

Core Requirements (4 courses, 10 credits)

- CAS-201 College to Career: Explore Your Options And Find Your Path
  Prerequisites:
  
  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.
  
  Credits:
  
  1.00
  
  Description:
  
  This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.
  
- MUH-101 History of Music I
  
  Credits:
4.00

Description:

Surveys Western music from CE800-1800, from Gregorian to Beethoven; selected major composers, representative masterworks, and the musical styles of the Medieval, Renaissance, Baroque, and Classical periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Fall Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• MUH-102 History of Music II

Credits:

4.00

Description:

Surveys Western art music from 1800-present, from Schubert to Jennifer Higdon; selected major composers, representative masterworks, and the musical styles of Romantic, Contemporary, and post-Modern periods; links the music to some of the major historical, cultural, artistic, and intellectual trends of these periods. Normally offered yearly.

Term:

Offered Spring Term

Type:

Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• MUH-511 Advanced Professional Development

Prerequisites:

Instructor's Permission required

Credits:

1.00

Description:

Students explore and prepare for career options in the field of Music.
Advanced Courses (8 courses, 29-32 credits)

Choose from the following. Students may choose eight Music History courses or combine Music History courses and related options.

Music History Courses (6-8 courses, 24-32 credits)

- **MUH-211 Music of the United States**
  
  Credits:
  
  4.00
  
  Description:
  
  Surveys American music from Colonial times to the present; various attempts to create an indigenous musical style; vernacular and art music genres including folk, concert, and religious music, jazz and musical theatre; includes music of Billings, Amy Beach, Ives, Copland, Bernstein, and Libby Larsen. Normally offered yearly.
  
  Term:
  
  Alternates Fall & Spring
  
  Type:
  
  Humanities Literature Requirement, Vis. & Perform Thry & Hst

- **MUH-212 Popular Music in the United States**
  
  Credits:
  
  4.00
  
  Description:
  
  Covers various popular music styles that emerged in America from 1850 to the present including minstrelsy, art song, piano music, band music, blues, jazz, country, rock and rap; includes representative musical selections, emphasis the social and cultural factors that foster the emergence and developed of these genres. Normally offered every other year.
  
  Term:
  
  Occasional
  
  Type:
  
  Humanities & History, Humanities Literature Requirement

- **MUH-221 History of Women in Music**
  
  Credits:
  
  4.00
Surveys music in the lives of women, including composers, performers, producers, mothers, and educators from the Middle Ages to the present; examines issues of gender and control, perspective in historical narrative, and religious and secular traditions that impact the cross-cultural reception of women's music. Normally offered every year.

Term:
Alternates Fall & Spring

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

**MUH-223 World Music**

Credits:
4.00

Description:
Covers topics in folk, traditional, and modern music of Africa, the Middle East, Asia, and Europe in the context of the cultures and lives of the indigenous peoples of those regions; examines how music interacts with the issues of race, gender, class, religion, politics, and social movements. Normally offered every other year.

Term:
Occasional

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, Diverse Perspectives

**MUH-227 Jazz and Blues**

Credits:
4.00

Description:
Follows the evolution of jazz from blues and ragtime through Dixieland, Swing, Bebop, Cool, Latin, Modern, Free, Fusion, and Avant-Garde to Post-modern expressions of the present; the contributions of major soloists, arrangers, composers, leaders, and bands. Normally offered every year.

Term:
Occasional

Type:
• MUH-331 Music in Film

Credits:
4.00

Description:

Studies the history and development of film music in Hollywood through its major composers and styles, the techniques of film scoring, and how music and its relationship to film have changed over the last century; critical listening to movie music while viewing films. Normally offered every other year.

Term:
Occasional

Type:
Humanities & History, Humanities Literature Requirement

• MUH-510 Independent Study

Credits:
1.00-4.00

Description:

Substantive reading/research in area of special interest directed by a faculty member.

Related Options (A maximum of 2 courses, 8 credits)

Or choose any Art History course at the 200-level or above

Notes:

• AP Credit: not applicable.
• A maximum of 3 courses taken at other institutions or as part of a study abroad program may be applied toward the major.
• Independent Study (MUH-510) may be taken only once (permission required).
• Any Seminar for Freshmen with a strong music component (50% or more of course content) may count toward the major with approval of the student's advisor.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Music History

The Music History major and Music History minor are available through the World Languages & Cultural Studies Department.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Music History Courses

Students interested in honors should consult with the department chair during the spring semester of their junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 overall GPA in Music History courses.

Honors candidates should register for Music History-502 in the fall semester of the senior year. Under the guidance of a faculty member, they will use this course to complete a research paper, which will be evaluated by all the professors in the student’s field of study. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

- MUH-502 Honors Thesis in Music History

  Prerequisites:

  Senior standing & permission of the Dept.Chair.

  Credits:

  4.00

  Description:

  A major research project completed under the supervision of a regular faculty member.

  Type:

Philosophy

The Philosophy program teaches analytical and writing skills that provide a solid foundation for law school, graduate training, or professional school. Philosophy students complete their undergraduate training prepared to pursue careers in community and public service, theology, college and secondary teaching, health services and medical ethics, business and business management, writing, and journalism and communications. A minor in Philosophy is also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Major Requirements: 10 courses, 37 credits

Core Requirements (7 courses, 25 credits)

- CAS-201 College to Career: Explore Your Options And Find Your Path

  Prerequisites:

  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

  Credits:

  1.00

  Description:

  This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.
• PHIL-210 History of Ancient & Medieval Philosophy

Credits:
4.00

Description:

The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:
Offered Fall Term

Type:
Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:
4.00

Description:

A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:
Offered Spring Term

Type:
Humanities & History, Humanities Literature Requirement

• PHIL-515 Senior Symposium

Prerequisites:

Prerequisite: PHIL 210 and 211 and consent of instructor.

Credits:
Description:

This is a required course for all students in the major, to be taken in the Spring Semester of their senior year. Students will prepare a portfolio of their previous coursework, collaborate with the faculty symposium leader on a selection of texts to read in common with other seniors, and prepare one paper for delivery at the Senior Symposium, usually held in late April. Students seeking Honors in Philosophy must take this course to complete the senior thesis. PHIL 210 and 211 and consent of instructor. 1 term - 4 credits. Normally offered Spring Semester every year.

Term:

Offered Spring Term

Choose one Philosophy course at the 400-level

Choose one of the following:

- PHIL-113 Critical Thinking and Argumentation

  Credits:

  4.00

  Description:

  An introduction to non-formal methods of analyzing and formulating arguments, including treatment of such concepts/topics as: the nature of argument, induction, deduction, validity, soundness, aspects of language which tend to interfere with logical thought, definition, role of emotion, types of disagreement, and fallacies. The course also emphasizes the practical application of sound reasoning in both evaluating arguments and making arguments of one's own about matters of issues facing society. 1 term - 4 credits. Normally offered every year.

  Term:

  Offered Both Fall and Spring

  Type:

  Humanities & History, Humanities Literature Requirement

- PHIL-212 Formal Logic

  Credits:

  4.00

  Description:

  An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

  Term:
Choose one of the following:

- **PHIL-119 Ethics**
  
  Credits:
  4.00
  
  Description:
  A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.
  
  Term:
  Offered Both Fall and Spring

- **PHIL-120 Ethics and Civic Life**
  
  Credits:
  4.00
  
  Description:
  In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.
  
  Type:
  Diverse Perspectives

- **PHIL-123 Social Ethics: The Good Life**
  
  Credits:
  4.00
  
  Description:
  An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue,
consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

• PHIL-127 Contemporary Moral Issues

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

Electives (3 courses, 12 credits)

Students are required to take three additional courses selected with the help of an advisor. At least one of these additional courses should be at the 200-level or higher and one should be at the 300-level or higher. A detailed program suited to the needs of the individual student will be developed for each Philosophy major.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Applied Ethics Requirements (3 courses, 12 credits)

Choose three courses in Applied Ethics, at least two of which must be at the 200-level or higher:

- **PHIL-120 Ethics and Civic Life**
In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

Type:

Diverse Perspectives

- PHIL-123 Social Ethics: The Good Life

Credits:

4.00

Description:

An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- PHIL-127 Contemporary Moral Issues

Credits:

4.00

Description:

A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.

Term:

Offered Both Fall and Spring

- PHIL-251 Philosophy of Race & Gender

Credits:
Description:

Prejudice of many kinds, such as racism and sexism, is so embedded in our social institutions, and is so traditional and pervasive that we often fail to notice it. In this course, we will deal with the history and nature of racism and sexism, as well as with possible solutions to these problems, including affirmative action and busing. Also to be discussed will be homosexuality, pornography and sex roles. 1 term - 4 credits. Normally offered alternate years. C a

Term:

Occasional

Type:

Cultural Diversity Opt A

• PHIL-319 Topics in Applied Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

This course will address in depth one or more specific issues in applied ethics. Topics will vary and may range from applied issues in political thought, such as just war theory or transitional justice, to specific questions in professional ethics or social policy, such as end-of-life care, economic justice, or the role of technology in the human future. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every other year.

Term:

Occasional

Type:

Cultural Diversity Opt B

• PHIL-362 Environmental Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00
Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

• PHIL-364 Business Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the ethical questions in the working life and policies of the business and professional sectors of society. The focus will vary, but common themes will include: the role of commerce in civil society; the relation of business to conceptions of economic and social justice; the meaning and application of codes of ethics; obligations of corporations and professional organizations to shareholders and stakeholders; responsibilities to clients and colleagues; workplace conduct; the nature of success and conflicts between legal and moral obligations; the impact of globalization. The course will employ a variety of readings, including ethical theory and specific case studies. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every other year.
• PHIL-513 Internship in Applied Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120 and consent of instructor

Credits:

4.00

Description:

Students in this course will serve as interns in a department-approved position with a service provider, professional organization, government agency, or non-governmental organization whose work is relevant to issues in applied ethics. A faculty mentor will meet with students regularly to develop individually designed programs of readings and to discuss this material and its relation to the internship experience. In addition to the substantial time commitment to the internship, course requirements will usually include a journal and a research project. PHIL 119 or 123 or 127 and consent of instructor. 1 term -4 credits. Normally offered every year.

- Philosophy Courses

In order to be eligible for honors in Philosophy, students must satisfy the following criteria:

1. Students must major in Philosophy and have an overall GPA of 3.5, and a 3.5 GPA in Philosophy courses.
2. Candidates must complete either two years of language study by graduation or PHIL-212 (Formal Logic) and PHIL-423 (Advanced Formal Logic) or the equivalent in exceptional cases.
3. Candidates should consult with the chair of the Philosophy department at the beginning of their junior year in order to apply for admission to the honors program in Philosophy. They must find a thesis supervisor by the end of their junior year.
4. Honors candidates must take a minimum of two 400-level courses.
5. Honors candidates should register for PHIL-515 (Senior Symposium) during the second half of their senior year. They must coordinate their thesis work (guided by their chosen supervisor) with the instructor in PHIL-515. For honors students, this course will entail completion of a major research paper, based on a proposal developed in PHIL-514. Research papers will be read and evaluated by the faculty of the department. Honors students will then defend their papers in individual sessions with the faculty. Honors will be awarded by a majority vote of the faculty.

- PHIL-212 Formal Logic

  Credits:

  4.00
Description:

An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

- **PHIL-423 Advanced Formal Logic**

  Prerequisites:

  Prerequisite: PHIL 212 or consent of instructor.

  Credits:

  4.00

  Description:

  In this course, students will put to work the logical theory developed in Formal Logic (Phil 212). In particular, students will use First-Order Logic to investigate computability and computation theory. Goedel's First and Second Incompleteness Theorems are a particular focus in the course. Prerequisite: PHIL 212 or consent of instructor. 1 term -4 credits. Normally offered alternate years.

  Term:

  Occasional

- **PHIL-514 Advanced Topics in Philosophy**

  Prerequisites:

  Prerequisite: PHIL 210 or PHIL 211 and consent of instructor.

  Credits:

  4.00

  Description:

  Students with sufficient background in philosophy and a special interest in areas of philosophy which cannot be covered in regularly offered courses will be guided by senior members of the Department. Students working on Honors in Philosophy must take this course in the first semester of their senior year to prepare a thesis proposal. PHIL 210 or PHIL 211 and consent of instructor. 1 term - 4 credits. Normally offered every year.

Type:
Expanded Classroom Requirement, Local Engagement Experience

• PHIL-210 History of Ancient & Medieval Philosophy

Credits:
4.00

Description:
The study of philosophical thought from the period of the ancient Greek philosophers through the Medieval thinkers, including such philosophers as Socrates, Plato, Aristotle, Epicurus, Zeno, Parmenides, Pythagoras, Protagoras, Augustine, Aquinas, Anselm, and Abelard. An introductory course designed to equip the student with a well grounded understanding and appreciation of Philosophy. 1 term - 4 credits. Normally offered every year.

Term:
Offered Fall Term

Type:
Humanities & History, Humanities Literature Requirement

• PHIL-211 History of Modern Philosophy

Credits:
4.00

Description:
A study of the prominent modern thinkers, such as Descartes, Leibniz, Spinoza, Locke, Berkeley, Hume, and Kant. The course is an historical survey of the key concepts, problems and developments in modern philosophy including rationalism, empiricism, and skepticism. The following themes central to Modern philosophy will be addressed: the nature of reality; the limits of human knowledge; self and self-identity; mind and body; freedom in theory and practice; reason vs. sentiment in ethics. 1 term - 4 credits. Normally offered every year.

Term:
Offered Spring Term
• PHIL-212 Formal Logic

Credits:
4.00

Description:
An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Type:
Occasional

• PHIL-219 Philosophy of Art

Credits:
4.00

Description:
What counts as art? What is beauty? Are there objective standards of beauty? This course examines the nature of aesthetic experience, art, beauty, and creativity. Through the classic and contemporary readings, the students will be introduced to philosophical issues concerning the meaning of art, artistic representation, perceptions of art, interpretation, and criticism. Students will be encouraged to reflect on their own experience of art and explore the relationships among the artist, the audience, the artwork, and the world. 1 term - 4 credits. Normally offered every third year.

Type:
Humanities & History, Humanities Literature Requirement, Vis. & Perform Thry & Hst

• PHIL-223 Philosophy in Literature

Credits:
4.00

Description:
An inquiry into some philosophical themes in modern literature. Existential reality, immortality, faith and nature, morality and reason will be explored through the creative word of modern authors. Special emphasis will be
placed on recurrent themes and their philosophical belief structure and meaning. 1 term - 4 credits.

Type:

Humanities & History, Humanities Literature Requirement

- **PHIL-228 Feminist Philosophy**

  Credits:

  4.00

  Description:

  This course is an introduction to the philosophy of feminist thought. Feminist theories of epistemology, metaphysics and morality will be examined as critiques of traditional philosophy. Feminist perspectives and methodologies include radical, liberal, postmodern, as well as more recent trends in ecofeminism. Special emphasis will be placed on explicit and implicit practices of alienation and exclusion as they have unfolded in the gendering of thought, truth, and reality. 1 term - 4 credits. Normally offered every third year. Cb

  Occasional

  Type:

  Cultural Diversity Opt A, Cultural Diversity BFA, Diverse Perspectives

- **PHIL-229 Eco-Feminism**

  Prerequisites:

  PHIL 119, or PHIL 123, or PHIL 127

  Credits:

  4.00

  Description:

  Examines the political, social, and ecological problems facing us as a global community. Having its roots in feminist theory and deep-ecology, eco-feminism provides a critical framework for ecological responsibility and accountability. Writings from eco-feminist thinkers and environmental activists around the world will be used to highlight the philosophical and political conflicts and challenges, including globalization and loss of biodiversity, global warming, international human rights, the relationship of gender and nature, and modes of redress for eco-justice and sustainable development.

  Type:

  Diverse Perspectives

- **PHIL-235 The Meaning of Life**
The question about the meaning of life is among the oldest and most perplexing questions of humanity. What do we live for? Which beliefs, values, and experiences sustain meaningful, fulfilling existence? Are we authors of our own destinies or powerless pawns in an unfathomable cosmic game? Does death render all our efforts superfluous? While our main focus will be philosophical, students will also explore the multiplicity of perspectives on life-meaning through the works of artists, poets, theologians, and psychologists. We will approach the question of the meaning of life both as an exciting intellectual endeavor and an existential challenge of great practical importance.

- **PHIL-250 Social & Political Philosophy**

  **Credits:**
  4.00

  **Description:**

  An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

  **Term:**
  Occasional

  **Type:**
  Humanities & History, Humanities Literature Requirement

- **PHIL-251 Philosophy of Race & Gender**

  **Credits:**
  4.00

  **Description:**

  Prejudice of many kinds, such as racism and sexism, is so embedded in our social institutions, and is so traditional and pervasive that we often fail to notice it. In this course, we will deal with the history and nature of racism and sexism, as well as with possible solutions to these problems, including affirmative action and busing. Also to be discussed will be homosexuality, pornography and sex roles. 1 term - 4 credits. Normally offered alternate years. C a

  **Term:**
• PHIL-255 Science, Myth, and Society
  
  Credits:
  4.00
  
  Description:
  Both mythology and science arise from the human need to explain the world, to understand its laws, and give an account of its origin. This course focuses on the controversial relationship between myth and science and explores their historical roots, their social influence and their respective views of reality, human nature, and origin of the universe. Both historical controversies and contemporary debates, such as evolution vs. intelligent design, will be considered. Topics in the philosophy of science, such as the nature and scope of the scientific method, will also be addressed. 1 term - 4 credits. Normally offered alternate years.

  Term:
  Occasional

  Type:

  Humanities & History, Humanities Literature Requirement

• PHIL-260 Philosophy of Religion
  
  Credits:
  4.00
  
  Description:
  This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

  Term:
  Occasional

  Type:

  Humanities & History, Humanities Literature Requirement
• PHIL-261 Eastern Philosophy

Credits:
4.00

Description:
The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Type: Cultural Diversity Opt A

- **PHIL-265 Women in Spirituality**
  
  Credits: 4.00
  
  Description:
  
  An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years. Cultural Diversity A

Term: Occasional
Type: Cultural Diversity BFA, Cultural Diversity Opt A, Diverse Perspectives

- **PHIL-266 African Philosophy**
  
  Credits: 4.00
  
  Description:
  
  An introduction to both traditional and modern philosophy from the African continent. Topics include: the intellectual dimensions of oral-traditional cultures within Africa; the impact of colonialism on African belief systems; philosophical responses to colonization; contributions of modern and contemporary African thinkers to the fields of social, political, moral and aesthetic philosophy.

- **PHIL-267 Chinese Philosophy**
  
  Credits: 4.00
  
  Description:
A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch'an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

- **PHIL-314 20th Century Philosophy**

  Prerequisites:
Prerequisite: PHIL 211 or consent of instructor.

Credits:
4.00

Description:
Examines one or more of the following major philosophical movements of this century: Pragmatism, Phenomenology, Existentialism, Logical Positivism, Analytic (Linguistic) Philosophy, Postmodernism and Critical Theory (Post-Analytic Philosophy). Prerequisite: PHIL 211 or consent of instructor. 1 term - 4 credits. Normally offered alternate years.

Term:
Occasional

- PHIL-316 Existentialism

Prerequisites:
Prerequisite: One course in Philosophy or consent of instructor.

Credits:
4.00

Description:
An overview of the existentialist tradition. Primary focus on issues and problems arising from the existentialist reaction to classical philosophy. Topics include: paradoxes and contradictions of human nature and human condition; radical freedom, commitment, and responsibility; existential anxiety, meaninglessness and the rejection of God; authenticity and self-deception; individuality and community. Philosophers to be discussed will include Kierkegaard, Nietzsche, Sartre, Camus, Dostoevsky, and Heidegger. Prerequisite: One course in Philosophy or consent of instructor. 1 term - 4 credits. Normally offered every other year.

Term:
Occasional

- PHIL-317 Independent Research

Prerequisites:
Prerequisite: Consent of instructor.

Credits:
1.00- 4.00

Description:
This course focuses on philosophical research and writing. It is designed as an independent research course to allow students the opportunity to focus on a topic of their choice and develop critical skills in writing and research methods. Students will be required to produce a research paper of a length commensurate with the number of credits in the course, complete with abstract, thesis, outline, bibliography, and primary and secondary sources. Students will be expected to follow MLA guidelines. Prerequisite: Consent of instructor. 1 term -1-4 credits (variable). Normally offered on an as-needed basis.

Term:
Occasional

• PHIL-318 Philosophy of Law

Prerequisites:

Prerequisite: One course in Philosophy or Instructor's consent

Credits:

4.00

Description:

Readings may include a range of classical authors, such as Plato and Aquinas, as well as the works of such 20th-century legal philosophers as H.L.A. Hart, Dworkin and Rawls. Also included may be leading jurists such as Oliver Wendell Holmes and Learned Hand. Issues discussed may include the nature of law, its relation to justice, and how the legal system should operate to arrive at just decisions. Prerequisite: One course in Philosophy or consent of instructor. 1 term - 4 credits. Normally offered every third year.

Term:
Occasional

• PHIL-319 Topics in Applied Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

This course will address in depth one or more specific issues in applied ethics. Topics will vary and may range from applied issues in political thought, such as just war theory or transitional justice, to specific questions in professional ethics or social policy, such as end-of-life care, economic justice, or the role of technology in the human future. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every other year.

Term:
Occasional
PHIL-330 African Philosophy and Religion

Prerequisites:
One course in Philosophy or consent of instructor.

Credits:
4.00

Description:
This course explores indigenous African systems of thought, modern academic African philosophy, African social and political theory, and contemporary debates centered on questions of identity, modernity, essentialism and historicity within the African context. 1 term - 4 credits. Normally offered every third year. C b

Term:
Occasional

PHIL-362 Environmental Ethics

Prerequisites:
PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:
4.00

Description:
An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:
Occasional

PHIL-363 Bio and Medical Ethics
Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

• PHIL-364 Business Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the ethical questions in the working life and policies of the business and professional sectors of society. The focus will vary, but common themes will include: the role of commerce in civil society; the relation of business to conceptions of economic and social justice; the meaning and application of codes of ethics; obligations of corporations and professional organizations to shareholders and stakeholders; responsibilities to clients and colleagues; workplace conduct; the nature of success and conflicts between legal and moral obligations; the impact of globalization. The course will employ a variety of readings, including ethical theory and specific case studies. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every other year.

Term:

Occasional

• PHIL-390 Internship in Politics, Philosophy and Economics

Prerequisites:

PHIL-120

Credits:

1.00- 4.00
Students in this course will serve as interns in a program-approved position with a service provider, professional organization, government agency, or non-governmental organization whose work is relevant to the PPE major. A faculty mentor will meet with students regularly to develop individually designed programs of readings and to discuss this material and its relation to the internship experience. In addition to the substantial time commitment to the internship, course requirements will usually include a weekly journal and a research project.

• PHIL-401 Ethics in Action 1: Persistence of the Classics

Prerequisites:
PHIL-210, PHIL-211, 4 credits of a 400-level PHIL course, and Instructor consent

Credits:
4.00

Description:
Examines how classical works of ancient and medieval moral and political philosophy raise questions and themes that persist in challenges facing contemporary public policy and personal ethics. Topics covered will include the nature of moral duties, the connection between happiness and morality, citizenship and virtue, the meaning of a good life, the attractions and limitations of moral relativism, the foundations of legitimate government, arguments for and against democracy, realism and idealism in statecraft, and the relationship between law and ethics. Authors may include the Pre-Socratic thinkers, Plato, Aristotle, Cicero, Augustine, and Aquinas, among others.

Term:
Offered Fall Term

• PHIL-402 Ethics in Action 2: the Crisis of the Modern

Prerequisites:
PHIL-210, PHIL-211, 1 400-level PHIL course, and Instructor consent

Credits:
4.00

Description:
Continues the examination of themes addressed in PHIL 401/701, with a focus on how radical change, from the early modern era to the present, poses both challenges and opportunities for thought and action. In addition to issues from PHIL 401/701, themes may include revolution and reaction, the role of science and technology, the clash between universalism and particularism, distributive justice and the economy, liberty and equality, faith and secularism, and others. Authors may include Machiavelli, Hobbes, Locke, Rousseau, Kant, Hegel, Mill, Marx, and Nietzsche, as well as contemporary thinkers.

Term:
Offered Spring Term
• PHIL-403 The Idea of Human Rights

Prerequisites:
Instructor's Consent

Credits:
4.00

Description:
This seminar will analyze and explore the universal human rights concept -- the idea that all human beings, by virtue of their humanity alone, have human rights that should be recognized by all nations. It will explore the concept's meaning; its theoretical underpinnings, critiques and defenses; and the kinds of specific rights suggested by the concept. The course will also provide an introduction to existing human rights law. Prerequisite: Consent of instructor. 1 term - 4 credits.

Term:
Occasional

• PHIL-414 Topics in Philosophy

Credits:
4.00

Description:
A detailed exposition and evaluation of a specific topic or of the views of one major philosophical thinker or group of thinkers. Readings from both primary and secondary sources. Prerequisite: PHIL 210 or 211 or consent of instructor. 1 term - 4 credits. Normally offered every year.

Term:
Offered Both Fall and Spring

• PHIL-416 Plato: Profiles in Philosophy

Prerequisites:
Prerequisite: PHIL 210 or consent of instructor.

Credits:
4.00

Description:
A detailed study of Platonic texts and issues. Works studied will vary but will often include dialogues such as the Apology, Euthyphro, Phaedo, Republic, and Symposium. Themes may include, among others: the nature of
philosophy and its relation to society; the dialogue form and the character of Socrates; the difference between truth and opinion; the meaning of virtue; justice and the ideal regime; the theory of forms and the nature of reality; love, death, and transcendence. Prerequisite: PHIL 210 or consent of instructor. 1 term ? 4 credits. Normally offered every third year.

- PHIL-418 Kant: Profiles in Philosophy
  
  Prerequisites:
  
  PHIL 211
  
  Credits:
  
  4.00
  
  Description:
  
  An examination of Kant's ethics and theory of knowledge, including the following topics: structures of our knowledge of nature and the empirical world; the limits of rationality; the possibility of any knowledge of God, the soul and other metaphysical entities; the antinomies (paradoxes) of pure reason; Kant's theory of unconditional morality based on duty; the idea of the categorical imperative; autonomy and universal moral law; the problem of evil. Selections from Kant's political writings will also be introduced. Prerequisite: PHIL 211 or consent of instructor. 1 term - 4 credits. Normally offered every third year.

  Term:
  
  Occasional

- PHIL-423 Advanced Formal Logic
  
  Prerequisites:
  
  Prerequisite: PHIL 212 or consent of instructor.
  
  Credits:
  
  4.00
  
  Description:
  
  In this course, students will put to work the logical theory developed in Formal Logic (Phil 212). In particular, students will use First-Order Logic to investigate computability and computation theory. Goedel's First and Second Incompleteness Theorems are a particular focus in the course. Prerequisite: PHIL 212 or consent of instructor. 1 term -4 credits. Normally offered alternate years.

  Term:
  
  Occasional

- PHIL-440 Stay the Hand: Philosophical and Literary Readings on Law and Violence
Credits:
4.00

Description:

An interdisciplinary course examining the idea of law and its function in human society, with a special focus on issues of violence, war, peace, and justice. The course will examine law as it represented, enacted, and discussed in various literary and philosophical writings from the ancient world to the present, to include various Biblical texts, Sophocles's Antigone, Aeschylus's Oresteia, Plato's Apology, Shakespeare's The Merchant of Venice, Melville's Billy Budd, Toni Morrison's Beloved, among many others.

Term:
Occasional

• PHIL-510 Independent Study

Prerequisites:
Prerequisite: PHIL 210 and 211 and consent of instructor.

Credits:
1.00- 4.00

Description:

Students meet with a department member to pursue advanced studies in areas of particular interest to them.

Term:
Offered Both Fall and Spring

• PHIL-513 Internship in Applied Ethics

Prerequisites:
PHIL-119, PHIL-123, PHIL-127 or PHIL-120 and consent of instructor

Credits:
4.00

Description:

Students in this course will serve as interns in a department-approved position with a service provider, professional organization, government agency, or non-governmental organization whose work is relevant to issues in applied ethics. A faculty mentor will meet with students regularly to develop individually designed programs of readings and to discuss this material and its relation to the internship experience. In addition to the substantial time commitment to the internship, course requirements will usually include a journal and a research project. PHIL 119 or 123 or 127 and consent of instructor. 1 term -4 credits. Normally offered every year.
- **PHIL-514 Advanced Topics in Philosophy**

  **Prerequisites:**
  
  Prerequisite: PHIL 210 or PHIL 211 and consent of instructor.

  **Credits:**
  
  4.00

  **Description:**
  
  Students with sufficient background in philosophy and a special interest in areas of philosophy which cannot be covered in regularly offered courses will be guided by senior members of the Department. Students working on Honors in Philosophy must take this course in the first semester of their senior year to prepare a thesis proposal. PHIL 210 or PHIL 211 and consent of instructor. 1 term - 4 credits. Normally offered every year.

  **Term:**
  
  Offered Fall Term

- **PHIL-515 Senior Symposium**

  **Prerequisites:**
  
  Prerequisite: PHIL 210 and 211 and consent of instructor.

  **Credits:**
  
  4.00

  **Description:**
  
  This is a required course for all students in the major, to be taken in the Spring Semester of their senior year. Students will prepare a portfolio of their previous coursework, collaborate with the faculty symposium leader on a selection of texts to read in common with other seniors, and prepare one paper for delivery at the Senior Symposium, usually held in late April. Students seeking Honors in Philosophy must take this course to complete the senior thesis. PHIL 210 and 211 and consent of instructor. 1 term - 4 credits. Normally offered Spring Semester every year.

• PPE-401 Political Economy
  
  Prerequisites:
  PHIL-119, PHIL-123, PHIL-127, or PHIL-120 and 2 of the following courses: GVT-110 GVT-225 EC-101 EC-102 PHIL-250 STATS-240 STATS-250 GVT-201 PHIL-212
  
  Credits:
  4.00
  
  Description:
  This interdisciplinary class brings together the fields of politics, philosophy, and economics at a high academic level. You will be confronted with hard questions about the sources, ends, and limits of government; the usefulness and troubles of free markets; the proper distribution of economic advantages in society; and what works best for building a just and efficient system of economic institutions.

• PPE-510 Independent Study
  
  Credits:
  1.00-4.00
• RS-111 Introduction to World Religions: Western Traditions

Credits:
4.00

Description:
This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaisam). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:
Diverse Perspectives

• RS-112 Introduction to World Religions: Eastern Traditions

Credits:
4.00

Description:
This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:
Cultural Diversity Opt B, Asian Studies, Diverse Perspectives

• RS-301 Reason and Revelation

Credits:
4.00

Description:
Traces the evolution of Judaism, Christianity and Islam to the High Middle Ages to explore the role of Neo-Platonism and Aristotelianism in clarifying and explaining dogma. Particular attention will be paid to ideas about the ways of knowing and rational proofs of God's existence in Philo of Alexandria, Augustine, Anselm, Ibn Rushd (Averroes), Aquinas and Maimonides. 1 term - 4 credits. Normally offered in alternate years.

- RS-510 Independent Study

Credits:

1.00- 4.00

Description:

Students meet with a department member to pursue advanced studies in areas of particular interest to them.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Major Requirements**
- **Concentrations**
- **Minor Requirements**
- **Honors**
- **Societies**
- **Physics Courses**

**Major Requirements: 23 courses and corresponding laboratories, 87 credits**

The department offers several programs leading to a BS, including:

- Physics
- Physics with a concentration in astrophysics
- Physics with a concentration in planetary science

A transfer student must see the chair of the department to determine which courses may be accepted for credit toward requirements of the Physics major.

**Core Requirements (14 courses and corresponding laboratories, 51 credits)**

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

  **Prerequisites:**

  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

  **Credits:**

  1.00

  **Description:**
This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- **PHYS-151 University Physics I**

  Prerequisites:

  MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

  Credits:

  3.00

  Description:

  Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

  Term:

  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

  Prerequisites:

  PHYS 151 concurrently

  Credits:

  1.00

  Description:

  The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

  Term:

  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR
PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

PHYS-153 University Physics III

Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits: 3.00

Description:
This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger’s equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:
Offered Fall Term

Type:
SCI TECH ENGNR

- PHYS-L153 University Physics III Lab

Credits: 1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:
SCI TECH ENGNR

- PHYS-333 Math Methods of Physics

Prerequisites:
MATH-265 and PHYS-153

Credits: 4.00

Description:
Applications of specific mathematical methods to problems in physics. Topics include complex analysis, integral transforms, eigenvalue problems, partial differential equations and group theory. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students’ currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:
Offered Fall Term

- **PHYS-361 Classical Mechanics I**

  **Prerequisites:**

  PHYS 152 ; MATH 265 which may be taken concurrently

  **Credits:**

  4.00

  **Description:**

  Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students’ currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

  Term:

  Offered Fall Term

- **PHYS-362 Classical Mechanics II**

  **Prerequisites:**

  PHYS 361

  **Credits:**

  4.00

  **Description:**

  Mechanics in non-inertial frames, rotational motion of rigid bodies, coupled oscillations, nonlinear mechanics and chaos, Hamiltonian mechanics, collision theory, continuum mechanics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings
are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

- **PHYS-431 Undergraduate Research in Physics**

  Credits:

  4.00

  Description:

  This course provides a mechanism for students to receive academic credit for engaging in research. A faculty member in the physics department will serve as the research advisor for each student. This faculty advisor will have the primary responsibility for overseeing each individual student's work and will decide the grade for the course. The research project may be initiated by the student or by a faculty member.

  Term:

  Offered Spring Term

- **PHYS-477 Electricity and Magnetism**

  Credits:

  4.00

  Description:

  Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

  Term:

  Offered Fall Term

- **PHYS-453 Modern Physics**

  Prerequisites:
Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:
Offered Fall Term

• PHYS-464 Statistical Physics

Prerequisites:
PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:
4.00

Description:
Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

• PHYS-L455 Advanced Laboratory

Prerequisites:
PHYS 451

Credits:
2.00

Description:
Classical and modern experiments in physics; Experiments may include Frank Hertz experiment, Hall effect, nuclear magnetic resonance, quantum dots, detection of muons, x-ray spectroscopy, ellipsometry, physics of timbre of musical instruments, data acquisition.

Term:

Offered Fall Term

Choose one of the following:

- **PHYS-461 Quantum Mechanics I**
  
  **Prerequisites:**
  
  PHYS-361
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students’ currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

  Term:

  Offered Fall Term

- **PHYS-462 Quantum Mechanics II**
  
  **Prerequisites:**
  
  Take PHYS-361 and PHYS-362
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video
lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Spring Term

Choose one Physics elective

Math and Basic Science Requirements (9 courses and corresponding laboratories, 36 credits)

Choose two of the following and the corresponding laboratories:

- **CHEM-111 General Chemistry I**
  
  Prerequisites:
  
  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.
  
  Credits:
  
  3.00
  
  Description:
  
  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.
  
  Term:
  
  Offered Both Fall and Spring
  
  Type:
  
  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry Laboratory I**
  
  Prerequisites:
  
  MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.
  
  Credits:
  
  1.00
  
  Description:
Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• **CHEM-112 General Chemistry II**

   Prerequisites:
   
   CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

   Credits:
   3.00

   Description:
   
   This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

   Term:
   Offered Both Fall and Spring

   Type:
   NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• **CHEM-L112 General Chemistry Laboratory II**

   Prerequisites:
   
   MATH-T-MPEL0 MATH-T-MPEL1 MATH-T-MPEL2 MATH-T-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

   Credits:
   1.00

   Description:
This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

• BIO-111 Introduction to the Cell

Prerequisites:
Must take BIO L111 concurrently

Credits:
3.00

Description:
Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-L111 Introduction to the Cell Laboratory

Prerequisites:
Concurrently with BIO 111

Credits:
1.00

Description:
Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.
Choose one Science elective (Science course 200-level or higher).

Choose the five courses below and the corresponding laboratory where applicable.

- **MATH-165 Calculus I**
  
  **Prerequisites:**
  
  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**
  
  **Prerequisites:**
  
  MATH-164 or MATH-165 with a minimum grade of C
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-265 Calculus III**
Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

**ECE-101 Digital Electronics**

Prerequisites:

ECE L101 MUST BE TAKEN CONCURRENTLY

Credits:

3.00

Description:

This course introduces the elements and tools of digital design. The course covers Boolean algebra, Karnaugh maps, Logic gates and digital circuits, analysis and design of combinational and sequential circuits, and timing issues. Adders, decoders, multiplexers, flip-flops, counters, and registers are implemented using TTL or CMOS ICs as well as VHDL-programmed FPGAs. Formerly ECE 203

Term:

Offered Fall Term

**ECE-L101 Digital Electronics-Lab**

Prerequisites:

ECE 101 MUST BE TAKEN CONCURRENTLY.

Credits:

1.00

Description:

Illustrates the concepts of ECE-101. Exercises in various forms of Combinational and Sequential Logic design. Use of test equipment. Design projects will include a digital security system, use of PSPICE to verify feasibility of
some designs. FPGA board citing Xilinx, software development tools from Xilinx and other third parties are introduced. Offered yearly. Formerly ECE L203

Term:
Offered Fall Term

- **CMPSC-F131 Computer Science I**

  Credits:

  4.00

  Description:

  This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

  Type:

Quantitative Reasoning

Choose one of the following and its corresponding laboratory where applicable:

- **ENS-333 Programming for Engineers**

  Prerequisites:

  ENS L333 concurrently

  Credits:

  3.00

  Description:

  This course will introduce programming concepts in the context of solving engineering problems. Emphasis will be placed on applying the high-level programming skills learned to particular platforms such as embedded systems. Students will implement various microcontroller programming exercises as well as an end of the semester project.

  Term:

  Offered Spring Term

- **ENS-L333 Programming for Engineers Lab**

  Prerequisites:

  ENS 333 concurrently
The Programming for Engineers lab is designed to supplement the Programming for Engineers Course.

- **CMPSC-F132 Computer Science II**
  
  **Prerequisites:**
  
  CMPSC F131
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

  **Type:**

  Quantitative Reasoning

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Physics

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Concentrations
- Minor Requirements
- Honors
- Societies
- Physics Courses

Students may choose a concentration in either Astrophysics or Planetary Science.

The Astrophysics concentration is directed towards students interested in pursuing graduate studies in astrophysics and is run in close collaboration with Suffolk’s Madrid campus. Students are required to spend Summer Session I following their junior year in Madrid to take upper-level courses in astrophysics. These courses will include trips to the Canary Islands to take data at one of the world’s major astronomical observatories, the Tenerife Observatory.

The Planetary Science concentration provides core training in earth and planetary sciences, together with mathematics, applied physics, computational and instrumental technology, needed for professions in the earth and space sciences.

Physics Major with Astrophysics or Planetary Science Concentration Requirements: 23 courses and corresponding laboratories, 87 credits

Core Requirements (11 courses, 39 credits)

- CAS-201 College to Career: Explore Your Options And Find Your Path

Prerequisites:

CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

Credits:

1.00

Description:
This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- **PHYS-151 University Physics I**

  **Prerequisites:**
  MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

  **Credits:**
  3.00

  **Description:**
  Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

  **Term:**
  Offered Both Fall and Spring

  **Type:**
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**

  **Prerequisites:**
  PHYS 151 concurrently

  **Credits:**
  1.00

  **Description:**
  The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

  **Term:**
  Offered Both Fall and Spring

  **Type:**
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR
PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

PHYS-153 University Physics III

Prerequisites:
MATH-121, MATH-164 or MATH-165

Credits: 3.00

Description:
This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger’s equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:
Offered Fall Term

Type:
SCI TECH ENGNR

- PHYS-L153 University Physics III Lab

Credits: 1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:
SCI TECH ENGNR

- PHYS-205 Introduction to Astrophysics

Prerequisites:
Prerequisite: PHYS 151-152

Credits: 4.00

Description:
An introduction to the concepts and methods of astrophysics; including a history of astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors, space programs, science and technology in society. Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology.

Term:
Offered Fall Term

- **PHYS-361 Classical Mechanics I**

  **Prerequisites:**
  
  PHYS 152 ; MATH 265 which may be taken concurrently

  **Credits:**
  
  4.00

  **Description:**
  
  Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

  Term:
  
  Offered Fall Term

- **PHYS-431 Undergraduate Research in Physics**

  **Credits:**
  
  4.00

  **Description:**
  
  This course provides a mechanism for students to receive academic credit for engaging in research. A faculty member in the physics department will serve as the research advisor for each student. This faculty advisor will have the primary responsibility for overseeing each individual student's work and will decide the grade for the course. The research project may be initiated by the student or by a faculty member.

Term:
Offered Fall Term

**PHYS-464 Statistical Physics**

Prerequisites:

PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:
Macrosopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

- **PHYS-L455 Advanced Laboratory**

  Prerequisites:
  
  PHYS 451

  Credits:
  
  2.00

  Description:
  
  Classical and modern experiments in physics; Experiments may include Frank Hertz experiment, Hall effect, nuclear magnetic resonance, quantum dots, detection of muons, x-ray spectroscopy, ellipsometry, physics of timbre of musical instruments, data acquisition.

  Term:
  
  Offered Fall Term

Choose one of the following concentrations:

Astrophysics Concentration Requirements (3 courses and corresponding laboratories where applicable, 12 credits)

- **PHYS-381 Observational Astronomy**

  Prerequisites:
  
  PHYS 151 AND PHYS 152 OR PHYS 153.

  Credits:
  
  2.00- 3.00

  Description:
  
  The topics covered include theoretical foundations of observational astronomy, designs of telescopes, instrumentation for telescopes, data acquisition and management, as well as practical problems in observational astronomy. Offered together with the laboratory component PHYS L381.
• PHYS-L381 Laboratory Research Assistantship III

Prerequisites:

Permission of Dept. Chair Required

Credits:

1.00- 2.00

Description:

This is a laboratory based research experience which involves teams of students assisting faculty in Physics/Astronomy research projects. Students will participate in an intensive laboratory training period in the Canary Islands and will follow through with research work in consultation with faculty based in the Madrid and Boston campuses. A final paper and presentation is required. Permission of department chair is required for registration and determination of course credits.

• PHYS-461 Quantum Mechanics I

Prerequisites:

PHYS-361

Credits:

4.00

Description:

Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-463 Stellar Astrophysics

Prerequisites:

Prerequisite: PHYS 451-452, PHYS 461-462 1 term - 4 credits

Credits:

4.00
Planetary Science Concentration Requirements (3 courses, 12 credits)

- PHYS-213 Introduction to Earth & Planetary Interiors
  
  Prerequisites:
  
  CHEM-111 and CHEM-112 OR PHYS-111 and PHYS-112
  
  Credits:
  4.00
  
  Description:
  
  This course introduces science majors to the constitution, composition, and energetics of the Earth's interior. It includes several important topics in Earth and planetary sciences, such as the geomagnetic field and the geodynamo, concepts of seismic exploration, geophysical fluid dynamics, and applications of geophysical methods in exploration of energy resources. It also relates the inner dynamics of planets to their surface and atmospheric effects by including topics such as evolution of planetary tectonics using seismology, gravity, geodesy, magnetics, and heat flow; dynamics of water and carbon cycles; and the origin of water on Earth and Mars. This course welcomes basic science, environmental science, engineering, and math majors.

- PHYS-350 Planetary Materials
  
  Prerequisites:
  
  PHYS-213
  
  Credits:
  4.00
  
  Description:
  
  This course provides an overview of the chemical and physical properties of the material constituents of the Earth and terrestrial planets, including minerals, rocks, lavas, and supercritical water. Topics include mineral structure and composition, bonding, optical properties, x-ray diffraction, phase transformations, and surface properties. The physics and chemistry of energy materials, synthetic nanomaterials will be included with emphasis/focus on energy resources, environmental impact, and geopolitical implications. There are no mandatory prerequisites for this course, but students who have taken introductory chemistry and/or physics will be familiar with some concepts discussed, and will find the going easier. Some background in Earth science is assumed (at the level of PHYS-213), and competence in basic chemistry is expected (some review will be provided where appropriate). The course is not mathematically intensive, but an appreciation of the fundamentals of calculus is important.
SCI-210 Earth and Planetary Crystals

Prerequisites:
Take SCI-L210 concurrently

Credits:
3.00

Description:
This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:
NATURAL SCIENCE FOR BS,NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

Math and Science Requirements (9 courses, 36 credits)

- MATH-165 Calculus I

  Prerequisites:
  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

  Credits:
  4.00

  Description:
  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications(curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- MATH-166 Calculus II

  Prerequisites:
  MATH-164 or MATH-165 with a minimum grade of C

  Credits:
Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-265 Calculus III

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• CMPSC-F131 Computer Science I

Credits:

4.00

Description:

This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.

Type:

Quantitative Reasoning

• CMPSC-F132 Computer Science II

Prerequisites:
Computer Science II (CSII) is the continuation of Computer Science I. The purpose of CSII is to expand students' understanding of Computer Science and computer programming, assuming that they have the basic knowledge of the Java language. The course introduce another programming language - C - and also focuses on the pure Object-Oriented features of Java, such as inheritance, polymorphism, and exceptions, as well as on simple data structures (lists, stacks, and queues) and algorithms (searching and sorting). By the end of the semester students will be able to develop sizable (several pages long) computer programs in the C and Java languages. Efficient C and Java program development requires an Integrated Development Environment (IDE) - a collection of tools that make it possible to edit, compile, and debug C and Java programs. Our IDE of choice is Eclipse. Eclipse is free and available for many operating systems, including Microsoft Windows (all flavors), Linux, Unix, and Mac OS X.

Choose two Science electives (Science courses at the 200-level or higher).

Choose two courses and the corresponding laboratories from the following:

- **CHEM-111 General Chemistry I**

  **Prerequisites:**

  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

  **Credits:**

  3.00

  **Description:**

  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

  **Term:**

  Offered Both Fall and Spring

  **Type:**

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-L111 General Chemistry Laboratory I**
Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1
MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:

1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

  Prerequisites:

  CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

  Credits:

  3.00

  Description:

  This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

  Term:

  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry Laboratory II**

  Prerequisites:
 MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:
1.00

Description:
This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **BIO-111 Introduction to the Cell**
  
  Prerequisites:
  Must take BIO L111 concurrently
  
  Credits:
  3.00
  
  Description:
  Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.
  
  Term:
  Offered Both Fall and Spring
  
  Type:
  SCI TECH ENGNR

- **BIO-L111 Introduction to the Cell Laboratory**
  
  Prerequisites:
  Concurrently with BIO 111
  
  Credits:
Description:

Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR

Physics

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Concentrations
- Minor Requirements
- Honors
- Societies
- Physics Courses

Minor Requirements: 5 courses and corresponding laboratories, 20 credits

- PHYS-151 University Physics I

  Prerequisites:

  MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

  Credits:

  3.00

  Description:

  Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

  Term:

  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-L151 University Physics Lab I

  Prerequisites:
Physics 151 concurrently

Credits:
1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-152 University Physics II

  Prerequisites:
  PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

  Credits:
  3.00

  Description:
  This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

  Term:
  Offered Both Fall and Spring

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- PHYS-L152 University Physics Lab II

  Prerequisites:
  PHYS 151 and L151 and PHYS 152 must be taken concurrently

  Credits:
  1.00
The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• PHYS-153 University Physics III

Prerequisites:
MATH-121, MATH-164 or MATH-165

Credits:
3.00

Description:
This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:
Offered Fall Term

Type:
SCI TECH ENGNR

• PHYS-L153 University Physics III Lab

Credits:
1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGNR

Choose one of the following:

- **PHYS-205 Introduction to Astrophysics**

  **Prerequisites:**
  
  Prerequisite: PHYS 151-152

  **Credits:**
  
  4.00

  **Description:**
  
  An introduction to the concepts and methods of astrophysics; including a history of astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors, space programs, science and technology in society. Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology.

  **Term:**
  
  Offered Fall Term

- **PHYS-361 Classical Mechanics I**

  **Prerequisites:**
  
  PHYS 152 ; MATH 265 which may be taken concurrently

  **Credits:**
  
  4.00

  **Description:**
  
  Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).
Term:
Offered Fall Term

- PHYS-453 Modern Physics

Prerequisites:
PHYS-153;

Credits:
4.00

Description:
Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:
Offered Fall Term

Choose one of the following:

- PHYS-461 Quantum Mechanics I

Prerequisites:
PHYS-361

Credits:
4.00

Description:
Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).
• PHYS-462 Quantum Mechanics II

Prerequisites:
Take PHYS-361 and PHYS-362

Credits:
4.00

Description:
Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:
Offered Spring Term

• PHYS-464 Statistical Physics

Prerequisites:
PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:
4.00

Description:
Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

• PHYS-477 Electricity and Magnetism
Credits:

4.00

Description:

Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

Note:

Most of these courses have substantial mathematics prerequisites (Calculus I, II, Multivariable Calculus) so it might not be possible for a non-science major to minor in physics.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

- Physics Courses

The honors program is designed to prepare students for graduate school in physics. It is designed to provide these students with additional training for standardized examinations required for graduate school and give them exposure to graduate-level coursework.

Requirements

Students may enroll starting in the beginning of sophomore year, with permission of the departmental honors committee, and must meet the following requirements:

1. The student must maintain a minimum 3.4 grade point average in the mathematics and science requirements for the major and must also complete at least 15 of these credits at Suffolk University.
2. The student must successfully complete a competency exam administered by the department at the end of the junior year. The examination covers all technical courses required for the major, taken by the student up to and including that semester. The test consists of problems selected from all of the main topics in each course. A three-person honors committee will assist students in preparing for the examination.
3. At the end of the senior year, the student must pass an oral examination administered by the honors committee.
4. The student must complete additional coursework in the form of PHYS-533, Special Topics in Physics, to help prepare for graduate school in physics.

Sigma Pi Sigma

The Suffolk University Chapter of the National Society of Physics Students was established in 1979. Election to Sigma Pi Sigma membership is conducted by the active Sigma Pi Sigma members. To be eligible, a student does not have to be a Physics major but must rank in the upper 20% of his/her class, have a minimum cumulative grade point average of 3.0, and a Physics grade point average of 3.3.

Society of Physics Students

The Society of Physics Students (SPS) is the student wing of American Institute of Physics (AIP). As a professional student association, it is focused on helping students develop the well-rounded skillset needed to succeed beyond the classroom. The Suffolk University chapter is open to any Suffolk student interested in physics. This network connects students across 200 colleges nationwide, many of which are right here in Boston. SPS provides and supports opportunities for students to develop professionally by attending conferences and workshops, organizing conferences, and participating in internship programs. It recognizes the need for students to develop leadership skills and experience in science outreach activities while they are in an undergraduate program.

The SPS helps students become contributing members of the professional community. Course work develops only one range of skills. Other skills needed to flourish professionally include effective communication and personal interactions, leadership experience, establishing a personal network of contacts, presenting scholarly work in professional meetings and journals, and providing outreach services to the campus and local communities.

- MS-301 Clinical Radiation I

  Prerequisites:

  BIO 204 and MS 200

  Credits:

  3.00

  Description:

  Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

  Term:

  Offered Spring Term

- MS-L301 Clinical Radiation Lab I

  Prerequisites:

  MS 301 concurrently

  Credits:
Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• MS-L303 Clinical Radiation III Lab

Prerequisites:

MS 303 concurrent

Credits:

1.00

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• MS-L304 Clinical Practicum for Radiation Therapy

Prerequisites:

Take MS-301 MS-L301;

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:
Summer
Type:
Expanded Classroom Requirement

- **MS-L311 Clinical Dosimetry Rotation I**
  Prerequisites:
  MS-L111 and take MS-301 concurrently
  Credits:
  1.00
  Description:
  Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Two, 8-hour days per week, TTH.
  Term:
  Offered Spring Term

- **MS-L313 Clinical Dosimetry Rotation III**
  Prerequisites:
  MS-L312 and MS-303 concurrently
  Credits:
  1.00
  Description:
  Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting. Three, 8-hour days per week, MWF.
  Term:
  Offered Spring Term

- **MS-L314 Clinical Practicum for Dosimetry**
  Prerequisites:
  Take MS-301 and MS-L311;
  Credits:
Description:
Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:
Summer

Type:
Expanded Classroom Requirement

- **MS-317 Radiation Physics II**
  
  Prerequisites:
  MS 315
  
  Credits:
  4.00
  
  Description:
  This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412
  
  Term:
  Offered Spring Term

- **MS-415 Clinical Dosimetry**
  
  Prerequisites:
  MS 315; MSL415 concurrently
  
  Credits:
  3.00
  
  Description:
  This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also
contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:
Offered Spring Term

- MS-L415 Clinical Dosimetry Lab

  Prerequisites:
  MS 315, MS L315, MS 415 concurrently

  Credits:
  1.00

  Description:
  This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

  Term:
  Offered Spring Term

- MS-416 Radiation Biology

  Prerequisites:
  Take BIO 403, MS 315 and MS L315.

  Credits:
  4.00

  Description:
  Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

  Term:
  Offered Spring Term

- MS-435 Brachytherapy

  Prerequisites:
MS-417

Credits:

4.00

Description:

Topics in this course will include, radioactive sources, calibration, instrumentation, factors affecting dose calculations, definitions of LDR, MDR and HDR, treatment planning and clinical dose calculation, implantation techniques, implant localization/verification, regulations, radiation safety, storage and QA. Detailed coverage of prostate brachytherapy including LDR and HDR will be emphasized.

Term:

Offered Spring Term

• MS-450 Dosimetry Systems and Networking

Credits:

4.00

Description:

This course is designed for the medical dosimetry student, to include a general overview of computer systems and networking in the field of radiation oncology. A historical view of computers will be covered as well as the intricate uses in the medical field today. Oncology information systems such as MOSAIC and ARIA, as well as radiation therapy software used for imaging, contouring, treatment planning, and patient charting applications will be covered. Data and system security will also be addressed.

Term:

Offered Spring Term

• MS-455 Advanced Radiation Treatment Techniques

Prerequisites:

MS 302 & RT Clinical Student

Credits:

1.00

Description:

For the senior radiation therapy student, this course will emphasize advanced radiation treatment techniques, including patient simulation, immobilization, contouring, beam modification, as well as special procedures.

• MS-465 Senior Seminar for Medical Sciences
This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

- **PHYS-111 College Physics I**

  **Prerequisites:**
  
  Take MATH-121 or MATH-134 or permission of Physics department chair; PHYS L111 taken concurrently

  **Credits:**
  
  3.00

  **Description:**
  
  Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

  **Term:**
  Offered Fall Term

  **Type:**
  
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **PHYS-L111 College Physics Lab I**

  **Prerequisites:**
  
  PHYS 111 concurrently

  **Credits:**
  
  1.00

  **Description:**
Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

**PHYS-112 College Physics II**

Prerequisites:
PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:
3.00

Description:
Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

**PHYS-L112 College Physics Lab II**

Prerequisites:
PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

Credits:
1.00

Description:
Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.
• PHYS-151 University Physics I

Prerequisites:
MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

Credits:
3.00

Description:
Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

• PHYS-L151 University Physics Lab I

Prerequisites:
PHYS 151 concurrently

Credits:
1.00

Description:
The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR
• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss’ law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-153 University Physics III
Prerequisites:

MATH-121, MATH-164 or MATH-165

Credits:

3.00

Description:

This calculus-based course is the introduction of the topics of modern physics. It begins with special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom. Then Schrodinger's equation is introduced with use of wave functions, particle box, barrier penetration, quantum mechanical tunneling, the Pauli Exclusion principle, the development of the periodic table, and the X-ray spectra. Development of solid state physics with bonding in molecules, band theory of solids and semiconductor behavior. The final topics cover nuclear physics, radioactivity, half-life, nuclear fission and fusion, medical uses of radiation, elementary particle physics and introduction to astrophysics.

Term:

Offered Fall Term

Type:

SCI TECH ENGNR

- PHYS-L153 University Physics III Lab

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts of special relativity, the Lorentz transformation, relativistic momentum and energy, addition of relativistic velocities, then covers early quantum theory, blackbody radiation, photoelectric effect, the Compton effect, photon interactions, pair production, and the Bohr theory of the atom.

Type:

SCI TECH ENGNR

- PHYS-205 Introduction to Astrophysics

Prerequisites:

Prerequisite: PHYS 151-152

Credits:

4.00
An introduction to the concepts and methods of astrophysics; including a history of astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors, space programs, science and technology in society. Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology.

Term:
Offered Fall Term

**PHYS-213 Introduction to Earth & Planetary Interiors**

Prerequisites:

CHEM-111 and CHEM-112 OR PHYS-111 and PHYS-112

Credits:

4.00

Description:

This course introduces science majors to the constitution, composition, and energetics of the Earth's interior. It includes several important topics in Earth and planetary sciences, such as the geomagnetic field and the geodynamo, concepts of seismic exploration, geophysical fluid dynamics, and applications of geophysical methods in exploration of energy resources. It also relates the inner dynamics of planets to their surface and atmospheric effects by including topics such as evolution of planetary tectonics using seismology, gravity, geodesy, magnetics, and heat flow; dynamics of water and carbon cycles; and the origin of water on Earth and Mars. This course welcomes basic science, environmental science, engineering, and math majors.

**PHYS-215 Nanomaterials and the Energy Problem**

Prerequisites:

CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

Credits:

4.00

Description:

This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:
Occasional
PHYS-L304 Radiation Therapy Practicum

Prerequisites:
Take PHYS-301 PHYS-L301; *Course fulfills the following: Expanded Classroom Requirement.

Credits:
1.00

Description:
Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:
Summer

Type:
Expanded Classroom Requirement

PHYS-L314 Medical Dosimetry Practicum

Prerequisites:
Take PHYS-301 and PHYS-L311; *Course fulfills the following: Expanded Classroom Requirement.

Credits:
1.00

Description:
Student dosimetrists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on treatment planning experience in the department of radiation oncology at our clinical affiliates. Under constant supervision of certified medical dosimetrists, the student will be guided toward the application of theory in the real world of cancer treatment planning.

Term:
Summer

Type:
Expanded Classroom Requirement

PHYS-333 Math Methods of Physics

Prerequisites:
MATH-265 and PHYS-153

Credits:
4.00

Description:
Applications of specific mathematical methods to problems in physics. Topics include complex analysis, integral transforms, eigenvalue problems, partial differential equations and group theory. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:
Offered Fall Term

- PHYS-350 Planetary Materials

Prerequisites:

PHYS-213

Credits:
4.00

Description:
This course provides an overview of the chemical and physical properties of the material constituents of the Earth and terrestrial planets, including minerals, rocks, lavas, and supercritical water. Topics include mineral structure and composition, bonding, optical properties, x-ray diffraction, phase transformations, and surface properties. The physics and chemistry of energy materials, synthetic nanomaterials will be included with emphasis/focus on energy resources, environmental impact, and geopolitical implications. There are no mandatory prerequisites for this course, but students who have taken introductory chemistry and/or physics will be familiar with some concepts discussed, and will find the going easier. Some background in Earth science is assumed (at the level of PHYS-213), and competence in basic chemistry is expected (some review will be provided where appropriate). The course is not mathematically intensive, but an appreciation of the fundamentals of calculus is important.

- PHYS-360 Topics in Astrobiology and Life in Extreme Environments

Prerequisites:

BIO-111 and PHYS-213

Credits:
4.00
The discovery of extreme environments and new insights into evolution, emergence and sustenance of life has expanded the view of life into a broader feasibility outside Earth. Discovery of exoplanets has opened up serious scientific exploration towards search for life in other planets. This upper-level course will introduce the scientific principles that underlie this newly evolving science of astrobiology. Discussion will include unique perspectives in life at extreme environments within Earth and their implication to the concepts of evolution and origins of life that form the basis for better understanding the habitability within our planet as well as any possibility of life in other planets.

- **PHYS-361 Classical Mechanics I**

  **Prerequisites:**

  PHYS 152 ; MATH 265 which may be taken concurrently

  **Credits:**

  4.00

  **Description:**

  Newton's laws of motion, projectiles, momentum, energy, conservation laws, oscillations, Lagrange equations, generalized momenta, central forces, orbits. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

  **Term:**

  Offered Fall Term

- **PHYS-362 Classical Mechanics II**

  **Prerequisites:**

  PHYS 361

  **Credits:**

  4.00

  **Description:**

  Mechanics in non-inertial frames, rotational motion of rigid bodies, coupled oscillations, nonlinear mechanics and chaos, Hamiltonian mechanics, collision theory, continuum mechanics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the
instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:
Offered Spring Term

- **PHYS-381 Observational Astronomy**

  Prerequisites:

  PHYS 151 AND PHYS 152 OR PHYS 153.

  Credits:

  2.00- 3.00

  Description:

  The topics covered include theoretical foundations of observational astronomy, designs of telescopes, instrumentation for telescopes, data acquisition and management, as well as practical problems in observational astronomy. Offered together with the laboratory component PHYS L381.

- **PHYS-L381 Laboratory Research Assistantship III**

  Prerequisites:

  Permission of Dept. Chair Required

  Credits:

  1.00- 2.00

  Description:

  This is a laboratory based research experience which involves teams of students assisting faculty in Physics/Astronomy research projects. Students will participate in an intensive laboratory training period in the Canary Islands and will follow through with research work in consultation with faculty based in the Madrid and Boston campuses. A final paper and presentation is required. Permission of department chair is required for registration and determination of course credits.

- **PHYS-411 Physics Senior Project**

  Prerequisites:

  Senior Standing

  Credits:

  4.00

  Description:
The senior project is the capstone research experience of the undergraduate Physics Major. This one semester course requires students to work one on one with faculty in an area of mutually agreed upon research. In general, the effort will involve the use of mathematical and programming skills, laboratory techniques, and possibly field work. The end result will be both a paper and a formal presentation to both faculty and students.

Term:
Offered Spring Term

- **PHYS-431 Undergraduate Research in Physics**

  Credits:
  4.00

  Description:
  This course provides a mechanism for students to receive academic credit for engaging in research. A faculty member in the physics department will serve as the research advisor for each student. This faculty advisor will have the primary responsibility for overseeing each individual student's work and will decide the grade for the course. The research project may be initiated by the student or by a faculty member.

  Term:
  Offered Spring Term

- **PHYS-451 Modern Physics I**

  Prerequisites:
  PHYS 152

  Credits:
  4.00

  Description:
  Atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics, and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay, and high energy physics.

- **PHYS-453 Modern Physics**

  Prerequisites:
  PHYS-153;

  Credits:
  4.00
Description:

Topics include atoms and elementary particles, atomic, molecular and nuclear systems. Quantum states and probability amplitude, wave mechanics and thermal properties of matter. Atomic spectra and structure, and molecular systems. Nuclear reactions, alpha and beta decay and high energy physics. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

- **PHYS-L455 Advanced Laboratory**

  Prerequisites:

  PHYS 451

  Credits:

  2.00

  Description:

  Classical and modern experiments in physics; Experiments may include Frank Hertz experiment, Hall effect, nuclear magnetic resonance, quantum dots, detection of muons, x-ray spectroscopy, ellipsometry, physics of timbre of musical instruments, data acquisition.

  Term:

  Offered Fall Term

- **PHYS-461 Quantum Mechanics I**

  Prerequisites:

  PHYS-361

  Credits:

  4.00

  Description:

  Non-relativistic study of particle systems, wave mechanical treatment, development of the concepts of observables, state vectors, operators and matrix representations. Hilbert space, angular momenta, coupling, symmetries, scattering, and perturbation theory. Harmonic oscillator and Hydrogen atom. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once a week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they
Term:

• PHYS-464 Statistical Physics

Prerequisites:

PHYS-361, PHYS-151, PHYS-L151, PHYS-152, PHYS-L152, PHYS-153 and PHYS-L153

Credits:

4.00

Description:

Macroscopic objects are made up of huge numbers of fundamental particles whose interactions are well understood. Physical properties that emerge from these interactions are, however, not simply related to these fundamental interactions. In this course we will develop the tools of statistical physics, which will allow us to predict emergent cooperative phenomena. We will apply those tools to a wide variety of physical questions, including the behavior of glasses, polymers, heat engines, magnets, and electrons in solids. Computer simulations will be extensively used to aid visualization and provide concrete realization of models in order to impart deeper understanding of statistical physics.

• PHYS-477 Electricity and Magnetism

Credits:

4.00

Description:

Electrostatic field energy, methods for solution of boundary value problems. The magnetostatic field and magnetic circuits. Electromagnetic field energy, plane waves, wave guides and cavity resonators. Interaction of charge particles with electromagnetic fields. This course is available in a hybrid/online format where all lectures are online and meetings with the instructor are required once per week. These meetings are for the purpose of helping students with homework problems, points in the video lectures they did not understand, or quizzes to test students' currency with the online material. These meetings are typically scheduled in a classroom but it is possible for a small number of students abroad to make special arrangements with the instructor so that the weekly meetings are held using online technology which supports voice and equation writing (such as the virtual classroom in Blackboard collaboration).

Term:

Offered Fall Term

• PHYS-510 Independent Study

Credits:

4.00

Description:

Directed reading, lectures, seminar and research in selected areas of special interest.

Term:
- **PHYS-570 Internship in Physics**
  
  **Prerequisites:**
  
  At least 54 credits
  
  **Credits:**
  
  2.00-4.00
  
  **Description:**
  
  Those students who intend to complete an internship must secure their own internship position prior to the start of the semester. A list of potential internship sites and their descriptions are available for students in the department's front office.
  
  **Type:**
  
  Expanded Classroom Requirement
  
- **RAD-L304 Radiation Therapy Practicum**
  
  **Prerequisites:**
  
  RAD/PHYS-301 and RAD/PHYS-L301
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care.
  
  **Term:**
  
  Summer
  
  **Type:**
  
  Expanded Classroom Requirement
  
- **RAD-L314 Medical Dosimetry Practicum**
  
  **Prerequisites:**
RAD/PHYS-301 and RAD/PHYS-L311

Credits:
1.00

Description:
Under the supervision of a Certified Medical Dosimetrist, students will gain hands on treatment planning experience in a clinical setting.

Term:
Summer

Type:
Expanded Classroom Requirement

- **SCI-101 Physical Science I**

  Prerequisites:
  One course of MATH 104,121,128(formerly 132),130,134, 164 or 165; SCI L101 taken concurrently

  Credits:
  3.00

  Description:
  Topics in the physical sciences treated at a level appropriate for non-science majors. Newton's laws, circular motion, heat, electricity and magnetism, optics, and atomic physics are discussed with problem sets required to illustrate the concepts.

  Term:
  Offered Fall Term

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **SCI-L101 Physical Science Lab I**

  Prerequisites:
  SCI 101 concurrently

  Credits:
  1.00

  Description:
Laboratory experiments and exercises to illustrate the principles covered in Science 101. On-time attendance is mandatory for pre-lab lectures. Weekly lab write-ups completed during the lab.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **SCI-102 Intro to Physical Science II**

  Prerequisites:

  One course of MATH 104 OR MATH 121 OR MATH 130 OR MATH 132 OR MATH 134 MATH 164 OR MATH 165. SCI L102 Must be taken concurrently

  Credits:

  3.00

  Description:

  Continuation of topics in the physical sciences for nonscience majors. Nuclear physics, chemical reactions, organic compounds, latitude and longitude, study of the solar system, astronomy, and cosmology are all covered.

  Term:

  Offered Spring Term

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- **SCI-L102 Physical Science Lab II**

  Prerequisites:

  SCI 102 concurrently

  Credits:

  1.00

  Description:

  Laboratory experiments and exercises to illustrate the principles covered in Science 102. On-time attendance is mandatory for pre-lab lectures. Weekly lab write-ups completed during the lab.

  Term:

  Offered Spring Term
- **SCI-L105 Composite Science Lab**

  Prerequisites:
  
  Permission of the department, transfer student status- 2 credits
  
  Credits:
  
  2.00
  
  Description:
  
  Combination of lecture and lab involving subject matter in the Physical Sciences (not Life Sciences). This is intended for transfer students who have received course credit in the physical sciences from another school and who still need to satisfy a two credit laboratory requirement.
  
  Term:
  
  Offered Both Fall and Spring

- **SCI-L106 Composite Science Lab**

  Prerequisites:
  
  Permission of the department, transfer student status- 1 credit
  
  Credits:
  
  1.00
  
  Description:
  
  Combination of lecture and lab involving subject matter in the Physical Sciences (not Life Sciences). This is intended for transfer students only who have received course credit in the physical sciences from another school and who still need to satisfy a one credit laboratory requirement.
  
  Term:
  
  Offered Both Fall and Spring

- **SCI-111 Astronomy I**

  Prerequisites:
  
  MATH-128 or higher and SCI-L11 must be taken concurrently.
  
  Credits:
3.00

Description:

History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. For non-science majors.

Term:

Occasional

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-L111 Astronomy Lab I**

  Prerequisites:

  SCI 111 concurrently

  Credits:

  1.00

  Description:

  Laboratory experiments and exercises to illustrate the principles discussed in science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

  Term:

  Occasional

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **SCI-112 Astronomy II**

  Prerequisites:

  MATH-128 or higher and SCI-L112 concurrently

  Credits:

  3.00

  Description:

  Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. For non-science majors.

  Term:
SCI-L112 Astronomy Lab II

Prerequisites:
SCI 112 concurrently

Credits:
1.00

Description:
Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term:
Occasional

SCI-113 A Habitable Earth Within the Solar System

Credits:
4.00

Description:
This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings of our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.
• SCI-161 Physical Science

Prerequisites:

One course from MATH 104 OR MATH 121 OR MATH 130 OR MATH 134 OR MATH-164 OR MATH 165 or permission of Dept. Chair. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Credits:

4.00

Description:

This is a one-semester, non-lab introduction to the physical sciences. The student will obtain a good understanding of a wide variety of topics covered in selected chapters of the text (measurements, Newton's laws, energy, heat and global warming, wave motion, electricity and magnetism, atomic physics, nuclear physics, chemical reactions, and astronomy) and will be able to solve problems illustrating the most important concepts. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ

• SCI-165 Inner Workings of Physics Universe

Credits:

4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab, 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• SCI-H171 The Built World: How Humans Engineer Environments- Honors
Prerequisites:
Honors students or at least a 3.3 GPA only

Credits:
4.00

Description:
The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,Honors

SCI-181 Science and Life in the 21st Century

Credits:
4.00

Description:
This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

SCI-201 Physics for Future Presidents

Credits:
4.00
This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

Type:
SCI TECH ENGNR

- **SCI-210 Earth and Planetary Crystals**

  **Prerequisites:**

  Take SCI-L210 concurrently

  **Credits:**

  3.00

  **Description:**

  This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study. Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

  **Type:**

  NATURAL SCIENCE FOR BS,NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

- **SCI-L210 Earth and Planetary Crystals Laboratory**

  **Prerequisites:**

  Take SCI-210 concurrently

  **Credits:**

  1.00

  **Description:**

  This course introduces concepts that are central to understanding crystals, gemstones and other natural materials abundant throughout the solar system. It includes an introduction to carbon-based crystals (diamonds, proteins,
viruses and ices) in context with origins of life, geopolitical significance and their applications. This laboratory-based course is an introduction to modern tools and techniques for crystal analysis with a historical context of some of the greatest discoveries in science (DNA, and other nanomaterials). It presents crystals and gems from their visually appealing point of view to their sometimes-dramatic physical characteristics, with a broad view of their formation, occurrence, physics, chemistry and resources perspective.

Type:

SCI TECH ENGNR
2016-2017 Archived Catalog Information
Politics, Philosophy, & Economics

The Politics, Philosophy, & Economics (PPE) program is an interdisciplinary major drawing from three academic disciplines: political science, philosophy, and economics. The program is structured to provide students with a foundation in policy, ethics, and economics so that they may develop a comprehensive understanding of the complexity of contemporary and enduring social issues.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Major Requirements**
- **Politics, Philosophy, & Economics Courses**

Major Requirements: 14 courses, 54 credits

Core Requirements (8 classes, 30 credits)

- **GVT-110 Introduction to American Democracy**
  
  Credits:
  
  4.00

  Description:

  An introduction to the American political system and constitutional framework. Focus will be on the interplay of various institutions (the Presidency, Congress and the Judiciary) in creating public policies. Contemporary public issues will be discussed, as will the role of political theory in shaping American democracy. Attention will be given to the role of the news media, public opinion, political ideology, political parties and interest groups in the American system.

  Type:

  Social Science, BSJ SOCIAL SCIENCE

- **GVT-225 U.S. Constitutional Law & Civil Liberties**
  
  Credits:
  
  4.00
This course examines a range of contemporary issues introducing students to the U.S. Constitution and the fundamental concepts of constitutional law. Students discuss and analyze topics including separation of powers, federalism, freedom of speech, the death penalty, gun control, and civil rights. We will explore current constitutional challenges and their relationship to law and society.

**Type:**

BSJ SOCIAL SCIENCE, Social Science

**EC-101 Applied Microeconomics**

**Prerequisites:**

Non CAS majors need to have completed at least 15 credits.

**Credits:**

3.00

**Description:**

This course introduces students to foundational principles of microeconomic theory, with an emphasis on applications of concepts to management decision-making in specific industry and market settings. It describes and analyzes the interaction of supply and demand and the behavior of the prices of goods, services. It explains the determinations of costs, output, strategic pricing, and governance by firms under conditions of perfect and imperfect competition in a global economy. In addition, it describes the supply demand for factors of production and the impact of taxes and government regulation and intervention on firms and consumers.

**Type:**

Social Science, BSJ SOCIAL SCIENCE

**EC-102 Global Macroeconomics**

**Prerequisites:**

Non-CAS majors need to have completed at least 15 credits

**Credits:**

3.00

**Description:**

This course examines the workings of the national and the global economy. It will describe the determination of Gross Domestic Product, the problems of unemployment, inflation, and the determination of economic growth. It will also describe and analyze the determination of the country's exchange rate, the balance of payments, and international borrowing and lending. A particular focus will be on understanding economic fluctuations (booms, busts, and recessions) in the domestic economy and its effects on other economies. It will analyze the role of the government and the effects of government spending and taxation on the economy. Furthermore, it will describe and analyze the determination of the quantity of money and interest rates in the economy and the role of the
country's central bank. It examines the basis and pattern of international trade and the effects of a country's trade policy on the economy.

Type:

Social Science, BSJ SOCIAL SCIENCE

- **PHIL-120 Ethics and Civic Life**

  Credits:

  4.00

  Description:

  In this class you will be introduced to the perspectives and methods of politics, philosophy, and economics and see how these three disciplines present distinct but interconnected dimensions of current social and political issues.

  Type:

  Diverse Perspectives

- **PHIL-250 Social & Political Philosophy**

  Credits:

  4.00

  Description:

  An examination of persistent debates in political and social philosophy, such as the meaning of property and welfare, the tensions between liberty and equality, censorship and freedom of expression, the relation of church and state, the possibility of political education and civic virtue, legitimacy of the state and revolution, war and problems of end and means, addressing historic injustice, such as racism, genocide, or sexism, among other topics. The class will focus on no more than two such themes. Students will read both classic and contemporary writings to address both the historical roots and the contemporary treatment of these questions. 1 term - 4 credits. Normally offered every year.

  Term:

  Occasional

  Type:

  Humanities & History, Humanities Literature Requirement

Choose one of the following:

- **STATS-240 Introduction to Statistics**

  Prerequisites:
Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

Credits:
4.00

Description:
Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

Type:
Quantitative Reasoning

STATS-250 Applied Statistics

Prerequisites:
MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

Credits:
4.00

Description:
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:
Quantitative Reasoning

GVT-201 Data Analysis and Politics

Prerequisites:
Sophomore Standing GVT 110 and 120 and Math 128 or higher.

Credits:
4.00

Description:
Quantitative analysis is quickly changing the way we understand and engage in politics, how we implement policy, and how organizations across the world make decisions. In this course, we will learn the fundamental principles of statistical inference and develop the necessary programming skills to answer a wide range of political and policy oriented questions with data analysis. Who is most likely to win the upcoming presidential election? Do countries become less democratic when leaders are assassinated? Is there racial discrimination in the labor market? These are just a few of the questions we will work on in the course.

Type:
Quantitative Reasoning

- PHIL-212 Formal Logic

Credits:
4.00

Description:
An introduction to formal (or semi-formal) study of the basic types of deductive arguments (propositional and syllogistic logic). 1 term - 4 credits. Normally offered every year.

Term:
Occasional

Type:
Quantitative Reasoning

Senior Capstone Course

- PPE-401 Political Economy

Prerequisites:
PHIL-119, PHIL-123, PHIL-127, or PHIL-120 and 2 of the following courses: GVT-110 GVT-225 EC-101 EC-102 PHIL-250 STATS-240 STATS-250 GVT-201 PHIL-212

Credits:
4.00

Description:
This interdisciplinary class brings together the fields of politics, philosophy, and economics at a high academic level. You will be confronted with hard questions about the sources, ends, and limits of government; the usefulness and troubles of free markets; the proper distribution of economic advantages in society; and what works best for building a just and efficient system of economic institutions.

Electives (6 courses, 24 credits)
In addition to the above requirements, students must choose two courses from each of the groups A, B, and C listed below.

A. Government

Choose any [Government](#) course at the 300-level or higher, including all internship options

B. Philosophy

- **PHIL-309 Philosophy of Freedom**
  
  **Prerequisites:**
  
  Prerequisite: One Philosophy course or consent of instructor.
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Focuses on the paradoxical relationship between freedom and responsibility and how that affects our thinking about freedom in the individual, social and political sphere. Both classical and contemporary thinkers will be considered. Prerequisite: One course in Philosophy or consent of instructor. 1 term - 4 credits. Normally offered every other year.
  
  **Term:**
  
  Offered Spring Term

- **PHIL-319 Topics in Applied Ethics**
  
  **Prerequisites:**
  
  PHIL-119, PHIL-123, PHIL-127 or PHIL-120
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course will address in depth one or more specific issues in applied ethics. Topics will vary and may range from applied issues in political thought, such as just war theory or transitional justice, to specific questions in professional ethics or social policy, such as end-of-life care, economic justice, or the role of technology in the human future. Prerequisite: PHIL 119, or 123, or 127. 1 term - 4 credits. Normally offered every other year.
  
  **Term:**
  
  Occasional

**Type:**
• PHIL-362 Environmental Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:

4.00

Description:

An examination of the moral issues involved in the interaction of humans with their natural environment. Topics include: the environmental crisis, human-centered vs. nature-centered ethics, intrinsic value in nature, obligations to future generations, the importance of preserving endangered species and wilderness, radical ecology, eco-feminism, and the role of social justice in environmental issues. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every year.

Term:

Occasional

• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

• PHIL-364 Business Ethics

Prerequisites:

PHIL-119, PHIL-123, PHIL-127 or PHIL-120

Credits:
Description:

An examination of the ethical questions in the working life and policies of the business and professional sectors of society. The focus will vary, but common themes will include: the role of commerce in civil society; the relation of business to conceptions of economic and social justice; the meaning and application of codes of ethics; obligations of corporations and professional organizations to shareholders and stakeholders; responsibilities to clients and colleagues; workplace conduct; the nature of success and conflicts between legal and moral obligations; the impact of globalization. The course will employ a variety of readings, including ethical theory and specific case studies. Prerequisite: PHIL 119, or 123, or 127. 1 term -4 credits. Normally offered every other year.

Term:

Occasional

- PHIL-401 Ethics in Action 1: Persistence of the Classics

Prerequisites:

PHIL-210, PHIL-211, 4 credits of a 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

Examines how classical works of ancient and medieval moral and political philosophy raise questions and themes that persist in challenges facing contemporary public policy and personal ethics. Topics covered will include the nature of moral duties, the connection between happiness and morality, citizenship and virtue, the meaning of a good life, the attractions and limitations of moral relativism, the foundations of legitimate government, arguments for and against democracy, realism and idealism in statecraft, and the relationship between law and ethics. Authors may include the Pre-Socratic thinkers, Plato, Aristotle, Cicero, Augustine, and Aquinas, among others.

Term:

Offered Fall Term

- PHIL-402 Ethics in Action 2: the Crisis of the Modern

Prerequisites:

PHIL-210, PHIL-211, 1 400-level PHIL course, and Instructor consent

Credits:

4.00

Description:

Continues the examination of themes addressed in PHIL 401/701, with a focus on how radical change, from the early modern era to the present, poses both challenges and opportunities for thought and action. In addition to
issues from PHIL 401/701, themes may include revolution and reaction, the role of science and technology, the
clash between universalism and particularism, distributive justice and the economy, liberty and equality, faith and
secularism, and others. Authors may include Machiavelli, Hobbes, Locke, Rousseau, Kant, Hegel, Mill, Marx, and
Nietzsche, as well as contemporary thinkers.

Term:
Offered Spring Term

- PHIL-513 Internship in Applied Ethics

  Prerequisites:
  PHIL-119, PHIL-123, PHIL-127 or PHIL-120 and consent of instructor

  Credits:
  4.00

  Description:

  Students in this course will serve as interns in a department-approved position with a service provider,
  professional organization, government agency, or non-governmental organization whose work is relevant to
  issues in applied ethics. A faculty mentor will meet with students regularly to develop individually designed
  programs of readings and to discuss this material and its relation to the internship experience. In addition to the
  substantial time commitment to the internship, course requirements will usually include a journal and a research
  project. PHIL 119 or 123 or 127 and consent of instructor. 1 term -4 credits. Normally offered every year.

  Term:
  Offered Both Fall and Spring

  Type:
  Expanded Classroom Requirement

Or choose any other 400-level Philosophy courses, when these are on a relevant topic

C. Economics

At least one of the two courses must be at the 300-level or higher.

- EC-131 Environmental Economics

  Credits:
  4.00

  Description:

  Identifies the environmental effects of economic activity, including polluted water and air, noise, and radiation, and
  values their costs and benefits. Analyzes mechanisms, including taxes and permits, for achieving a socially
preferable level of pollution. Traces role played by institutions, including common ownership, in affecting
environmental decay. Resource depletion (of oil, forests, and fisheries) and appropriate policy responses.

Type:
Social Science, BSJ SOCIAL SCIENCE

- EC-141 Development Economics

  Credits:
  4.00

  Description:
  Why do so many countries remain so poor? Why have some (e.g. the Asian tigers) grown so rapidly? Why have
  most of the countries of Eastern Europe and the Former Soviet Union been slow to ignite economic growth?
  These questions are addressed by looking at domestic factors (government policies, resource endowments) as
  well as the international environment (mobile investors, international financial institutions). Asks what economic
  choices these countries face now. Normally offered yearly. Cultural Diversity B

  Type:
  Cultural Diversity Opt B, Social Science, Asian Studies, BSJ SOCIAL SCIENCE, Diverse Perspectives

- EC-151 Economic & Human Geography

  Credits:
  4.00

  Description:
  The study of how economic and human activity is distributed across space, the reasons for these spatial
distributions, and the processes that change the spatial organization of economic activity over time. Topics
include: maps, map projections, and geographic information systems; population geography; the organization
and location of cities, towns and villages; transportation and communication policy; industrial location; the geography
of world trade; and geographic features of economic development. The course takes a global perspective, and
draws on cases and examples from all over the world. Cultural Diversity B

  Type:
  Cultural Diversity Opt B, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives

- EC-311 Intermediate Micro Theory

  Prerequisites:
  EC 101 and EC 102

  Credits:
Description:

Theory of consumer behavior and demand. Theory of production and costs of production. Theory of the firm, and price and output decisions in different market structures, i.e., under perfect competition, monopoly, monopolistic competition and oligopoly. Decisions relating to pricing and employment of various inputs (labor and capital) under perfectly competitive, and less than perfectly competitive, resource markets. Required of all majors in Economics. Normally offered every semester.

Type:

Social Science, BSJ SOCIAL SCIENCE

- EC-421 Public Finance

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

The theory of tax policy and tax structure. The effects on economic behavior (including labor supply, saving, risk-taking and investment, charitable giving, and growth) of different taxes (income, sales, value-added, inheritance, wealth, property). Tax equity, efficiency and incidence, in the United States and in comparative perspective. Additional topics include modeling state taxes; social security and pensions; and tax compensation. Normally offered yearly.

Type:

Social Science, BSJ SOCIAL SCIENCE

- EC-423 Economics of Regulation

Prerequisites:

EC 101 and EC 102

Credits:

4.00

Description:

This course examines regulation and analyzes the structure, conduct, and performance of American industry. Monopoly and strategic behavior in oligopoly and monopolistic competition are considered. U.S. antitrust law and the effect of regulatory laws on industrial performance are explored. Regulatory practices, rate setting, deregulation, public-enterprise pricing, and issues in privatization are examined, with an emphasis on case studies and policy analysis. Normally offered every other year.
- **EC-430 International Trade Theory & Policy**

  **Prerequisites:**
  EC 101 and EC 102

  **Credits:**
  4.00

  **Description:**
  This course examines theories of international trade. The policy implications of each theory are explored and the effect of trade on the welfare of the nation is examined. Also the development of trade blocs and the political economy of trade are studied. Normally offered every year.

- **EC-433 Public Choice**

  **Prerequisites:**
  EC-101 and EC-102

  **Credits:**
  4.00

  **Description:**
  This course considers the degree to which it is possible to explain, predict, and guide political decision through the application of economic analysis. The course is organized around two competing visions of public choice: (1) a traditional organic approach that sees the core problem for public choice as requiring the maximization of social welfare and (2) a newer contractual approach that sees that problem as requiring attention to the institutional framework within which political decisions are made. Topics to be considered include the Arrow paradox and other problems in aggregating individual choices, rent-seeking, the Leviathan hypothesis, and non-market demand-revealing methods.

- **EC-442 International Monetary Economics**

  **Prerequisites:**
EC 101 and EC 102

Credits:
4.00

Description:
The balance of payments and foreign exchange markets and instruments, and the determination of exchange rates. Balance-of-payments adjustments under alternative exchange-rate systems, international liquidity, international economics policy and open economy macroeconomics.

Type:
Social Science, BSJ SOCIAL SCIENCE

- EC-460 Game Theory

Prerequisites:
EC 101 and EC 102

Credits:
4.00

Description:
This course introduces students to the foundations of game theory using applications from economics and everyday decision-making. The course examines the common strategic elements of interactions between consumers and producers, governments and citizens, politicians and their constituencies, countries and their trading partners, and various other participants in social relationships. The course provides a theoretical framework for modeling strategic interaction, beginning with the development of the concept of a Nash equilibrium, reputation, signaling, collective-action problems, and voting procedures and strategies. Normally offered every other year.

Type:
Quantitative Reasoning

- EC-503 Internship in Economics

Prerequisites:
Instructor's consent required

Credits:
4.00

Description:
Approximately 12 hours per week working in a position designed to give the student responsibility and a learning opportunity in economics. Interested students should consult the instructor in advance.

Type:

Social Science, BSJ SOCIAL SCIENCE

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Politics, Philosophy, & Economics

The Politics, Philosophy, & Economics (PPE) program is an interdisciplinary major drawing from three academic disciplines: political science, philosophy, and economics. The program is structured to provide students with a foundation in policy, ethics, and economics so that they may develop a comprehensive understanding of the complexity of contemporary and enduring social issues.

Psychology

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Accelerated Bachelor's/Master's in Mental Health Counseling Degree Requirements
- Societies
- Psychology Courses

Major Requirements: 10 courses, minimum of 40 credits

The requirements for the Psychology major are described below. The major is designed to maximize both exposure to core disciplines within the field of psychology (core and distribution requirements) and individual student choice (elective courses).

Note that the first digit of the course number indicates the academic level of the course and recommended sequence for a student to progress through the curriculum (e.g. 100-level courses should be taken before 200-level courses early in the curriculum; 300-level courses are typically taken after 200-level courses in the junior and senior years). 500-level courses are upper-level courses that require approval by the instructor; they are appropriate for juniors and seniors. Please note that this coding system is provided only as a guideline. Students should consult with their departmental academic advisor to determine optimal course scheduling.

Core Requirements (3 courses, 12 credits)

- **PSYCH-114 General Psychology**

  Credits:

  4.00

  Description:

  Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

  Term:

  Offered Both Fall and Spring
- PSYCH-215 Behavioral Statistics
  Prerequisites:
  PSYCH 114; Restricted to majors only unless with permission of instructor.
  Credits:
  4.00
  Description:
  Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.
  Term:
  Offered Both Fall and Spring

- PSYCH-216 Research Methods and Design
  Prerequisites:
  PSYCH 114 and PSYCH 215
  Credits:
  4.00
  Description:
  First provides an overview of the historical background and conceptual foundation of psychology as a science before introducing students to research methods employed in psychology including naturalistic observation, qualitative, correlational, quasi-experimental, and experimental designs. The experimental method and principles of experimental design are emphasized. The laboratory component of the class helps familiarize students with practical issues that arise when implementing an empirical research study. Required for psychology majors; should be taken before the junior year. Offered every semester.
  Term:
  Offered Both Fall and Spring

Type: Social Science
PSYCH-114 General Psychology is a prerequisite for most Psychology courses (see individual course descriptions for prerequisite information). It is generally recommended that Psychology majors take this course in the first semester of the freshman year. The two-course methods sequence, Behavioral Statistics and Research Methods and Design, should be completed by the end of the sophomore year.

Distribution Requirements (3 courses, 12 credits)

Students select at least three distribution courses to count toward the major, with at least one from each bases group. In keeping with the latest trends in the field, we have designed distribution requirements to provide students with a breadth of psychology training in the areas of social and cultural psychology, the neurological and biological bases of behavior, and developmental perspectives in psychological science. All 300-level courses require sophomore standing and PSYCH-114 as a prerequisite, and typically incorporate a substantive critical-analysis writing or presentation component (e.g., a research paper) into the curriculum.

Social or Cultural Bases

- **PSYCH-226 Theories of Personality**
  
  **Prerequisites:**
  
  PSYCH 114
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Surveys the major theoretical approaches to personality including representative theorists from the psychoanalytic, trait, cognitive, behavioral, and humanistic perspectives. Topics include personality dynamics, personality development, and the study of individual differences. Normally offered yearly.
  
  **Term:**
  
  Offered Fall Term
  
  **Type:**
  
  Social Science

- **PSYCH-241 Social Psychology**
  
  **Prerequisites:**
  
  PSYCH 114
  
  **Credits:**
  
  4.00
  
  **Description:**
Studies the social determinants of the behavior of individuals in relation to groups and surveys current research findings in such major content areas as attribution, prejudice, conformity, obedience, social cognition, interpersonal attraction, altruism, and aggression. Normally offered every semester.

Term:
Offered Both Fall and Spring
Type:
Social Science

- **PSYCH-324 Psychology of Identity and the Self**

  **Prerequisites:**
  PSYCH 114 and Sophomore Standing.

  **Credits:**
  4.00

  **Description:**
  Focuses on the processes by which self-knowledge, self-awareness, self-conceptions, self-esteem, self-consciousness, and self-blame are developed and maintained. May also include consideration of: identity and the life story; biography, narrative, and lives; cognition and personality; cultural conceptions of self; and self psychology. Normally offered alternate years.

  Term:
  Offered Spring Term
  Type:
  Social Science

- **PSYCH-341 Sociocultural Perspectives on Behavior and Experience**

  **Credits:**
  4.00

  **Description:**
  Exposes students, particularly those interested in helping and service careers, to the terminology and approaches used in the study and critical discussion of culture and diversity. This course will be useful for students seeking to develop sensitivity, respect, and understanding of the meaning that individuals attach to their own definitions of culture. While topics relevant to specific, ethnic, racial, gendered and differently abled groups will be covered to varying degrees in each semester, attention is also given to culture as a personal and societal construction. Normally offered alternate years. This course fulfills the Cultural Diversity Requirement.

  Term:
Offered Spring Term

Type:

Cultural Diversity Opt A, Social Science

Neurological and Biological Bases

- **PSYCH-312 Cognitive Neuroscience**

  **Prerequisites:**
  
  PSYCH 114, PSYCH 215, PSYCH 216 and sophomore standing.

  **Credits:**
  
  4.00

  **Description:**
  
  Examines theory and research on a number of human cognitive processes, including topics of attention, perception, learning, memory, language processing, problem solving, social cognition, emotion, and reasoning. The field of cognition integrates knowledge from the multiple disciplines of neuropsychology, neuroscience, linguistics, and information science. Normally offered yearly.

  **Term:**
  
  Offered Fall Term

- **PSYCH-313 Physiological Psychology**

  **Prerequisites:**
  
  PSYCH 114, PSYCH 215 and PSYCH 216.

  **Credits:**
  
  4.00

  **Description:**
  
  Explores the organic basis for human and animal behavior. Topics include nervous system structure and function as well as neurological contributions to motivation, emotion, stress, and abnormal functioning. Normally offered yearly.

  **Term:**
  
  Offered Fall Term
• **PSYCH-325 Health Psychology**

   Prerequisites:
   
   PSYCH 114 and Sophomore Standing

   Credits:
   
   4.00

   Description:
   
   Surveys theory and research in health psychology and behavioral medicine. Examines the bidirectional effects of social and behavioral processes on physical health and functioning, including topics such as HIV/AIDS, cancer, and cardiovascular disease. Psychological and physiological perspectives on stress and coping are a primary focus throughout the semester. Normally offered yearly.

   Term:
   
   Offered Fall Term

   Type:

   Social Science

Developmental Bases

• **PSYCH-233 Child Development**

   Prerequisites:
   
   PSYCH 114

   Credits:
   
   4.00

   Description:
   
   Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

   Term:
   
   Offered Both Fall and Spring

   Type:
• PSYCH-333 Adult Development & Aging

Prerequisites:

PSYCH 114 and Sophomore Standing.

Credits:

4.00

Description:

Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:

Offered Both Fall and Spring

Type:

Social Science

• PSYCH-334 Adolescent Development

Prerequisites:

PSYCH-114 and sophomore standing

Credits:

4.00

Description:

Examines the physical, cognitive, emotional and social aspects of adolescence. Attention is given to identity, parent-adolescent relationships, values, sexuality, and career development as well as psychopathology, drug use and abuse, delinquency, and alienation. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science
Elective Courses (2 courses, 6 credits)

Choose two of the following:

- **PSYCH-219 SL-Psychology of Trauma**
  
  Credits:
  4.00
  
  Description:
  In this course students meet community needs by engaging in service-learning outside the classroom. Examines trauma from a historical, feminist, sociocultural and developmental perspective. This course will consider contemporary ways of conceptualizing, assessing, and treating psychological consequences resulting from exposure to traumatic stress. Classic and current reading materials will introduce students to leading theoretical models. Topics include war, natural disasters, child abuse, and rape. Prerequisite: PSYCH 114. 1 term - 3 semester hours. Normally offered alternate years.
  
  Type:
  Social Science, Service Learning

- **PSYCH-222 Human Sexuality**
  
  Credits:
  4.00
  
  Description:
  Examines the field of human sexuality across the life span. Topics include: sexual anatomy and physiology, sexual development, typical and atypical sexual behavior, sexual dysfunctions, current research on human sexuality, and relationship issues as they relate to sexuality and intimacy. Normally offered yearly.
  
  Term:
  Offered Both Fall and Spring
  
  Type:
  Social Science

- **PSYCH-236 Psychology of the Family**
  
  Credits:
  4.00
  
  Description:
  Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology,
family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **PSYCH-243 Organizational Psychology**

  Prerequisites:
  Take PSYCH-114;

  Credits:
  4.00

  Description:
  Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

  Type:
  Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **PSYCH-247 Asian Perspectives on Health and Work**

  Credits:
  4.00

  Description:
  Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

  Term:
  Offered Spring Term

  Type:
• **PSYCH-314 Learning & Reinforcement**

  **Prerequisites:**
  PSYCH 114 and Sophomore standing

  **Credits:**
  4.00

  **Description:**
  Examines the process of the storage of information, including its affective coloration and the role of incentives and rewards. Topics include: principles of classical and operant conditioning; verbal and episodic learning; and traditional and contemporary theory. Normally offered alternate years.

  **Term:**
  Offered Fall Term

  **Type:**
  Social Science

• **PSYCH-315 Neuropsychological Syndromes**

  **Prerequisites:**
  Take PSYCH-215 PSYCH-216;

  **Credits:**
  4.00

  **Description:**
  Provides students with a neuropsychological perspective on common neuropsychological disorders, including attention-deficit hyperactivity disorder (ADHD), learning disabilities, autistic spectrum disorders, seizure disorders, traumatic brain injury (TBI), multiple sclerosis, HIV, and various dementias. Normal aging will also be considered.

  **Term:**
  Offered Fall Term

  **Type:**
  Social Science

• **PSYCH-317 Psychology of Addictions**
Prerequisites:
PSYCH 114 and Sophomore standing

Credits:
4.00

Description:
Examines patterns of addictive behavior with an emphasis on physiological etiology. Social, historical, and other psychological perspectives are also discussed. Populations at high risk, the consequences of addiction, and research on interventions and treatment will also be addressed. Normally offered yearly.

Term:
Offered Spring Term

Type:
Social Science

• PSYCH-321 Introduction to Counseling Skills

Prerequisites:
PSYCH 114 and Sophomore standing

Credits:
4.00

Description:
Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:
Offered Fall Term

Type:
Social Science

• PSYCH-326 Abnormal Psychology

Prerequisites:
PSYCH 114, and Sophomore standing or permission of the instructor

Credits:
4.00
Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **PSYCH-336 Developmental Psychopathology**

  Prerequisites:
  PSYCH 114 and sophomore standing

  Credits:
  4.00

  Description:
  Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

  Term:
  Offered Fall Term

  Type:
  Social Science

- **PSYCH-348 Introduction to Forensic Psychology**

  Prerequisites:
  PSYCH 114. 54 credits or more only.

  Credits:
  4.00

  Description:
The interface of psychology and the law will be examined in the context of forensic psychological evaluations performed for courts, attorneys and related agencies or facilities. Topics ranging from the role of psychologists in the courtroom, standards of practice, the detection of deception, civil commitment, and ethical issues in forensic psychology will be discussed. Legal standards and the assessment of competence to stand trial, insanity defenses, child abuse and neglect, and child custody/visitation will be explored. This course will review the theoretical and conceptual aspects of the psycho-legal issues in question as well as the practical applications of the skills and knowledge domains needed to perform forensic psychological evaluations. The study of relevant laws and regulations as applied to the interface of psychology and the law will be considered. Discussion will include specialized forensic topics such as expert testimony, the evaluation of sexual offenders, violence risk assessment, and forensic psychological testing.

Type:

Social Science

Experiential Requirement

Choose one of the following:

- **PSYCH-346 Community Psychology**

  Prerequisites:

  PSYCH-114 and Junior standing

  Credits:

  4.00

  Description:

  Explores the efforts of psychologists to enhance the well-being of groups and communities. Complementing clinical approaches, community approaches have implications for both theory (e.g., environmental and/or person-environment theories) and practice (e.g., prevention-oriented paradigms targeted to groups and social systems). Students will be expected to attend weekly two-hour lectures to examine key concepts within the field (e.g., competence building, empowerment) as well as to engage in weekly community service activity. Normally offered every semester. This course fulfills the Expanded Classroom Requirement.

  Term:

  Offered Both Fall and Spring

  Type:

  Social Science, Expanded Classroom Requirement, Local Engagement Experience

- **PSYCH-350 Psychology Internship**

  Prerequisites:

  PSYCH-340 and Junior Standing. Restricted to majors only unless permission of instructor. This course fulfills the Expanded Classroom Requirement
Credits:
4.00

Description:

Provides majors the opportunity to gain a meaningful field experience in a professional setting that is consistent with their academic background and career goals. Students are on site a minimum of 6 hours a week and must accrue at least 60 hours of field experience. Seminar discussions focus on career exploration, the integration of academic knowledge with the demands of the workplace, and professional issues, including ethics, self-reflection, and cultural sensitivity. Students are required to secure an internship before the course begins. Normally offered every semester.

Term:
Offered Both Fall and Spring

Type:
Social Science, Expanded Classroom Requirement

Those students who intend to complete an internship must secure their own internship position prior to the start of the semester.

Senior Capstone Requirement

The capstone requirement should be completed during the senior year by taking one of the following courses. Prerequisites include completion of departmental Core and Distribution requirements.

Note: PSYCH-428 is by invitation only.

- **PSYCH-408 Senior Capstone: History & Systems Of Psychology**

  Prerequisites:

  PSYCH 114, PSYCH 215, PSYCH 216 and senior standing

  Credits:

  4.00

  Description:

  Presents the historical context for the development of core ideas, theoretical positions, and research in the field of Psychology. The interconnections between systematic orientations and domains of psychology are examined along with their relation to contemporary concepts and issues in the field of psychology. Offered every semester.

  Term:

  Offered Both Fall and Spring

  Type:

  Social Science
PSYCH-428 Honors Capstone: History & Systems Of Psychology

Prerequisites:

PSYCH 114, PSYCH 215 & 216; Senior standing and admission by invitation only.

Credits:

4.00

Description:

Examines both historical and contemporary theories in the field, along with current empirical research. Emphasizes the reading of primary source material, critical thinking, and seminar discussion. Assessment and measurement issues emphasized, along with substantive writing, typically in the form of an empirical research proposal or a critical review of the theory and research in a focused domain. Admission by invitation only. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate Psychology degree program.

2. Student must also meet all requirements for the Master's degree in Mental Health Counseling.

3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.

4. Before enrolling in a particular graduate course during the senior year, a student must obtain permission from the MHC graduate program director.

5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree (BA/BS and Master’s) will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor’s degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

Psi Chi, the National Honor Society in Psychology

The Suffolk University chapter of Psi Chi, the national honor society in psychology, was chartered on April 28, 1978. Psi Chi is a member of the American Association of College Honor Societies. At Suffolk University we invite the top ten percent of our junior and senior class to join. Students will be contacted each spring with an invitation. Criteria for membership include:

1. Junior or senior class status
2. Completion of at least five courses in Psychology at Suffolk
3. Cumulative GPA in the top 10% of juniors and seniors

New members are inducted into the Psi Chi National Honor Society at a ceremony held in April.

• NEUR-101 Intro to Neuroscience

Credits:

4.00

Description:

Introduces the field of neuroscience, the study of the organization and function of the nervous system of humans and other animals. Neuroscientists examine how individual neurons function as signaling devices, how groups of neurons operate as circuits to produce fundamental units of behavior, and how much larger systems in the brain subserve complex functions such as memory and consciousness. Topics include the neuron and neural transmission, the overall function and organization of the nervous system, the development of the brain, neural plasticity, sleep, memory and other higher cognitive functions. Normally offered alternate years.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR

• PSYCH-114 General Psychology

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology;
• PSYCH-H114 General Psychology

Prerequisites:

Restricted to honor students in the CAS and SBS schools, or instructor permission

Credits:

4.00

Description:

Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

• PSYCH-215 Behavioral Statistics

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring
- **PSYCH-216 Research Methods and Design**

  **Prerequisites:**
  
  PSYCH 114 and PSYCH 215

  **Credits:**
  
  4.00

  **Description:**
  
  First provides an overview of the historical background and conceptual foundation of psychology as a science before introducing students to research methods employed in psychology including naturalistic observation, qualitative, correlational, quasi-experimental, and experimental designs. The experimental method and principles of experimental design are emphasized. The laboratory component of the class helps familiarize students with practical issues that arise when implementing an empirical research study. Required for psychology majors; should be taken before the junior year. Offered every semester.

  **Term:**
  
  Offered Both Fall and Spring

- **PSYCH-219 SL-Psychology of Trauma**

  **Credits:**
  
  4.00

  **Description:**
  
  In this course students meet community needs by engaging in service-learning outside the classroom. Examines trauma from a historical, feminist, sociocultural and developmental perspective. This course will consider contemporary ways of conceptualizing, assessing, and treating psychological consequences resulting from exposure to traumatic stress. Classic and current reading materials will introduce students to leading theoretical models. Topics include war, natural disasters, child abuse, and rape. Prerequisite: PSYCH 114. 1 term - 3 semester hours. Normally offered alternate years.

  **Type:**
  
  Social Science, Service Learning

- **PSYCH-222 Human Sexuality**
Credits:
4.00

Description:
Examines the field of human sexuality across the life span. Topics include: sexual anatomy and physiology, sexual development, typical and atypical sexual behavior, sexual dysfunctions, current research on human sexuality, and relationship issues as they relate to sexuality and intimacy. Normally offered yearly.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **PSYCH-226 Theories of Personality**
  
  Prerequisites:
  
  PSYCH 114

  Credits:
  
  4.00

  Description:
  Surveys the major theoretical approaches to personality including representative theorists from the psychoanalytic, trait, cognitive, behavioral, and humanistic perspectives. Topics include personality dynamics, personality development, and the study of individual differences. Normally offered yearly.

  Term:
  
  Offered Fall Term

  Type:
  
  Social Science

- **PSYCH-H226 Theories of Personality**

  Prerequisites:

  PSYCH 114; CAS Honors

  Credits:

  4.00

  Description:
Surveys the major theoretical approaches to personality including representative theorists from the psychoanalytic, trait, cognitive, behavioral, and humanistic perspectives. Topics include personality dynamics, personality development, and the study of individual differences. Normally offered yearly.

Term:
Offered Fall Term

Type:
Social Science, Honors

- **PSYCH-233 Child Development**

  Prerequisites:
  
  PSYCH 114

  Credits:
  
  4.00

  Description:
  
  Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

  Term:
  
  Offered Both Fall and Spring

  Type:
  
  Social Science

- **PSYCH-H233 Child Development**

  Prerequisites:
  
  PSYCH 114; Restricted to CAS Honor Students

  Credits:
  
  4.00

  Description:
  
  Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.
- **PSYCH-236 Psychology of the Family**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  Social Science

- **PSYCH-241 Social Psychology**
  
  **Prerequisites:**
  
  PSYCH 114
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Studies the social determinants of the behavior of individuals in relation to groups and surveys current research findings in such major content areas as attribution, prejudice, conformity, obedience, social cognition, interpersonal attraction, altruism, and aggression. Normally offered every semester.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  Social Science

- **PSYCH-243 Organizational Psychology**
Prerequisites:
Take PSYCH-114;

Credits:
4.00

Description:
Focuses on diversity concerns in various aspects of the psychology of the workforce. This includes job analysis, recruitment, selection, evaluation, training, retention, and termination. Employee morale, well-being, stress, and hardiness are considered.

Type:
Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **PSYCH-245 Consumer Psychology**
  
  Credits:
  4.00

  Description:
  Investigates the perceptual and motivational bases of consumer decision making in relation to advertising, packaging, brand loyalty, and other marketing considerations. Prior familiarity with psychological principles helpful but not essential. Normally offered alternate years.

  Term:
  Offered Fall Term

  Type:
  Social Science

- **PSYCH-247 Asian Perspectives on Health and Work**

  Credits:
  4.00

  Description:
  Examines theoretical and empirical approaches that provide insight into Asian viewpoints on socialization practices, family systems, health/well-being, cultural traditions/values, and spiritual philosophy/literature. Explores the diversity among Asian cultures in terms of language, history, religion/spiritual faith, and healthcare practices, all of which play a significant role in shaping the psychological characteristics, interpersonal relationships, and work dynamics of Asians and Asian immigrants. Students critically analyze similarities and differences between Asian and Western psychological perspectives of health and work through didactic and experiential learning.
components. This course fulfills the Cultural Diversity Requirement and may fulfill the Expanded Classroom Requirement. Normally offered alternate years.

Term:
Offered Spring Term

Type:
Social Science, Asian Studies, Cultural Diversity Opt A, Diverse Perspectives

- **PSYCH-248 The Psychology of Mindfulness**

  Credits: 2.00

  Description:
  
  Over the past few decades, there has been a surge of interest in the investigation of mindfulness (intentional and non-judgmental awareness of the present moment) as a psychological construct. In this course, we will consider different definitions of this construct, examine the neuroscience behind mindfulness-based practices, and explore its practical applications in a variety of areas including psychotherapy, education, and business. To enhance experiential learning, students will engage in, and reflect on, several common mindfulness practices derived from exercises from evidence-based programs.

- **PSYCH-249 Introduction to Lifespan Development**

  Credits: 4.00

  Description:
  
  Examines development across the lifespan, from prenatal development through old age. Addresses biological, cognitive, social, and emotional development, with attention to the role of culture and context. Reviews major theories of development and how such theories provide conceptual frameworks for understanding the development of adaptive and maladaptive behaviors and trajectories. Also addresses implications for treatment, prevention, and positive development across the lifespan.

- **PSYCH-312 Cognitive Neuroscience**

  Prerequisites:
  
  PSYCH 114, PSYCH 215, PSYCH 216 and sophomore standing.

  Credits: 4.00

  Description:
Examines theory and research on a number of human cognitive processes, including topics of attention, perception, learning, memory, language processing, problem solving, social cognition, emotion, and reasoning. The field of cognition integrates knowledge from the multiple disciplines of neuropsychology, neuroscience, linguistics, and information science. Normally offered yearly.

Term:
Offered Fall Term
Type:
Social Science

- **PSYCH-313 Physiological Psychology**

Prerequisites:
PSYCH 114, PSYCH 215 and PSYCH 216.

Credits:
4.00

Description:
Explores the organic basis for human and animal behavior. Topics include nervous system structure and function as well as neurological contributions to motivation, emotion, stress, and abnormal functioning. Normally offered yearly.

Term:
Offered Fall Term
Type:
Social Science

- **PSYCH-314 Learning & Reinforcement**

Prerequisites:
PSYCH 114 and Sophomore standing

Credits:
4.00

Description:
Examines the process of the storage of information, including its affective coloration and the role of incentives and rewards. Topics include: principles of classical and operant conditioning; verbal and episodic learning; and traditional and contemporary theory. Normally offered alternate years.
Term: 
Offered Fall Term

Type: Social Science

PSYCH-315 Neuropsychological Syndromes

Prerequisites:
Take PSYCH-215 PSYCH-216;

Credits: 4.00

Description:
Provides students with a neuropsychological perspective on common neuropsychological disorders, including attention-deficit hyperactivity disorder (ADHD), learning disabilities, autistic spectrum disorders, seizure disorders, traumatic brain injury (TBI), multiple sclerosis, HIV, and various dementias. Normal aging will also be considered.

Term: 
Offered Fall Term

Type: Social Science

PSYCH-317 Psychology of Addictions

Prerequisites:
PSYCH 114 and Sophomore standing

Credits: 4.00

Description:
Examines patterns of addictive behavior with an emphasis on physiological etiology. Social, historical, and other psychological perspectives are also discussed. Populations at high risk, the consequences of addiction, and research on interventions and treatment will also be addressed. Normally offered yearly.

Term: 
Offered Spring Term

Type: Social Science
Social Science

• PSYCH-321 Introduction to Counseling Skills
  Prerequisites:
  PSYCH 114 and Sophomore standing
  Credits:
  4.00
  Description:
  Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.
  Term:
  Offered Fall Term
  Type:
  Social Science

• PSYCH-324 Psychology of Identity and the Self
  Prerequisites:
  PSYCH 114 and Sophomore Standing.
  Credits:
  4.00
  Description:
  Focuses on the processes by which self-knowledge, self-awareness, self-conceptions, self-esteem, self-consciousness, and self-blame are developed and maintained. May also include consideration of: identity and the life story; biography, narrative, and lives; cognition and personality; cultural conceptions of self; and self psychology. Normally offered alternate years.
  Term:
  Offered Spring Term
  Type:
  Social Science

• PSYCH-325 Health Psychology
Prerequisites:

PSYCH 114 and Sophomore Standing

Credits:

4.00

Description:

Surveys theory and research in health psychology and behavioral medicine. Examines the bidirectional effects of social and behavioral processes on physical health and functioning, including topics such as HIV/AIDS, cancer, and cardiovascular disease. Psychological and physiological perspectives on stress and coping are a primary focus throughout the semester. Normally offered yearly.

Term:

Offered Fall Term

Type:

Social Science

• PSYCH-326 Abnormal Psychology

Prerequisites:

PSYCH 114, and Sophomore standing or permission of the instructor

Credits:

4.00

Description:

Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

Term:

Offered Both Fall and Spring

Type:

Social Science

• PSYCH-333 Adult Development & Aging

Prerequisites:

PSYCH 114 and Sophomore Standing.
Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **PSYCH-334 Adolescent Development**

  Prerequisites:
  
  PSYCH-114 and sophomore standing

  Credits:
  
  4.00

  Description:
  
  Examines the physical, cognitive, emotional and social aspects of adolescence. Attention is given to identity, parent-adolescent relationships, values, sexuality, and career development as well as psychopathology, drug use and abuse, delinquency, and alienation. Normally offered yearly.

  Term:
  
  Offered Fall Term

  Type:
  
  Social Science

- **PSYCH-336 Developmental Psychopathology**

  Prerequisites:
  
  PSYCH 114 and sophomore standing

  Credits:
  
  4.00
Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:
Offered Fall Term

Type:
Social Science

- **PSYCH-340 Professional Development in Psychology**

Prerequisites:
PSYCH-114; Psychology majors with 32 or more credits;

Credits:
1.00

Description:
Professional Development in Psychology is a one-credit hybrid course designed to enhance your understanding of career options that are available to psychology majors and provide you with the skills and knowledge needed to secure an internship. Through class discussions, readings, and engaging assignments, students will learn about multiple career paths open to psychology majors, develop internship and job search skills, discover on and off-campus resources related to career development, and gain knowledge aimed at maximizing their opportunities for success post-graduation.

Type:
Social Science

- **PSYCH-341 Sociocultural Perspectives on Behavior and Experience**

Credits:
4.00

Description:
Exposes students, particularly those interested in helping and service careers, to the terminology and approaches used in the study and critical discussion of culture and diversity. This course will be useful for students seeking to develop sensitivity, respect, and understanding of the meaning that individuals attach to their own definitions of culture. While topics relevant to specific, ethnic, racial, gendered and differently abled groups will be covered to
varying degrees in each semester, attention is also given to culture as a personal and societal construction. Normally offered alternate years. This course fulfills the Cultural Diversity Requirement.

Term:
Offered Spring Term

Type:
Cultural Diversity Opt A, Social Science

• PSYCH-346 Community Psychology

Prerequisites:
PSYCH-114 and Junior standing

Credits:
4.00

Description:
Explores the efforts of psychologists to enhance the well-being of groups and communities. Complementing clinical approaches, community approaches have implications for both theory (e.g., environmental and/or person-environment theories) and practice (e.g., prevention-oriented paradigms targeted to groups and social systems). Students will be expected to attend weekly two-hour lectures to examine key concepts within the field (e.g., competence building, empowerment) as well as to engage in weekly community service activity. Normally offered every semester. This course fulfills the Expanded Classroom Requirement.

Term:
Offered Both Fall and Spring

Type:
Social Science, Expanded Classroom Requirement, Local Engagement Experience

• PSYCH-348 Introduction to Forensic Psychology

Prerequisites:
PSYCH 114. 54 credits or more only.

Credits:
4.00

Description:
The interface of psychology and the law will be examined in the context of forensic psychological evaluations performed for courts, attorneys and related agencies or facilities. Topics ranging from the role of psychologists in the courtroom, standards of practice, the detection of deception, civil commitment, and ethical issues in forensic
psychology will be discussed. Legal standards and the assessment of competence to stand trial, insanity defenses, child abuse and neglect, and child custody/visitation will be explored. This course will review the theoretical and conceptual aspects of the psycho-legal issues in question as well as the practical applications of the skills and knowledge domains needed to perform forensic psychological evaluations. The study of relevant laws and regulations as applied to the interface of psychology and the law will be considered. Discussion will include specialized forensic topics such as expert testimony, the evaluation of sexual offenders, violence risk assessment, and forensic psychological testing.

Type:

Social Science

- **PSYCH-350 Psychology Internship**

  **Prerequisites:**
  
  PSYCH-340 and Junior Standing. Restricted to majors only unless permission of instructor. This course fulfills the Expanded Classroom Requirement

  **Credits:**
  
  4.00

  **Description:**
  
  Provides majors the opportunity to gain a meaningful field experience in a professional setting that is consistent with their academic background and career goals. Students are on site a minimum of 6 hours a week and must accrue at least 60 hours of field experience. Seminar discussions focus on career exploration, the integration of academic knowledge with the demands of the workplace, and professional issues, including ethics, self-reflection, and cultural sensitivity. Students are required to secure an internship before the course begins. Normally offered every semester.

- Accelerated Bachelor's/Master's Degree in Communication
- Honors
- Courses

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate degree program within the departments of Communication & Journalism or Advertising, Public Relations, and Digital Media.

2. Student must also meet all requirements for the Master’s degree in Communication.

3. Students will take two Communication graduate courses during their senior year; one during the fall semester and one during the spring semester. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.

4. The graduate courses taken during the senior year will be determined by the Communication graduate program director.

5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the requirements for a Bachelor’s degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

4.00

Description:
Practical exposure to methods of production and production equipment of the media. Students are introduced to basic theoretical concepts, such as three-point lighting and white balancing, and apply those to their productions. Students create a variety of non-fiction videos in teams and/or by themselves.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

• CJN-3376 Public Relations II: Research

Prerequisites:
CJN-2277 (Formerly CJN-277)

Credits:
4.00

Description:
Examines how research aids the public relations practice. Students learn research methods that address public relations planning and problem-solving. Assignments provide students with hands-on practice using research for a PR project.

Term:
Offered Both Fall and Spring

• CJN-3377 Public Relations III: Strategic Writing

Prerequisites:
CJN-2277(formerly CJN-277);
Focuses on writing principles for public relations including the formulation of clear PR objectives, determining the knowledge of the target audience, and the development of key messages. Students apply these principles to common PR formats, including news releases, pitch letters, biographies, speeches, emails, digital content, and social media posts.

Term:
Offered Both Fall and Spring

• CJN-3455 Production II

Prerequisites:
CJN-2355(formerly CJN-355)

Credits:
4.00

Description:
Building on skills acquired in CJN 2355, students use advanced equipment and production techniques to produce complex video projects, including fiction filmmaking. Projects cover various styles and genres, such as music video and film noir.

Term:
Offered Both Fall and Spring

• CJN-4455 Production III

Prerequisites:
CJN-3455(formerly CJN-455)

Credits:
4.00

Description:
Builds on the theories and techniques developed in CJN 3455, focusing on the advanced concepts and skills needed to design and produce professional-level media content for digital distribution. Provides the opportunity to produce high-quality material for student media portfolios in various genres.

Term:
Offered Spring Term

- **CJN-4477 Public Relations IV: Campaigns**

  Prerequisites:
  
  CJN-2277(formerly CJN-277) and CJN-3377(formerly CJN-377) and Senior Standing.

  Credits:
  
  4.00

  Description:
  
  Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

  Term:
  
  Offered Both Fall and Spring

  Type:
  
  Expanded Classroom Requirement

- **CJN-H4477 Public Relations IV Honors: Campaigns**

  Prerequisites:
  
  CJN-2277(formerly CJN-277) and CJN-377(formerly CJN-377) and CJN-3376 and by invitation only.

  Credits:
  
  4.00

  Description:
  
  Examines typical public relations problems experienced by profit and not-for-profit organizations. Provides honors students with an opportunity to demonstrate their mastery of the skills, techniques, and knowledge of public relations by creating a comprehensive campaign plan for a community client.

  Term:
  
  Offered Spring Term

  Type:
  
  Expanded Classroom Requirement,Honors
2016-2017 Archived Catalog Information

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Pure Mathematics Major Requirements
- Pure Mathematics Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

Major Requirements: 14 courses and corresponding laboratories where applicable, 50 credits

Mathematics Requirements (12 courses, 42 credits)

- MATH-165 Calculus I

  Prerequisites:

  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

  Credits:

  4.00

  Description:

  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications(curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- MATH-166 Calculus II
Prerequisites:
MATH-164 or MATH-165 with a minimum grade of C

Credits:
4.00

Description:
Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-200 Modern Mathematics and Career Exploration

Prerequisites:
Freshman or Sophomore Status

Credits:
1.00

Description:
This one credit course aims to help freshmen and sophomore students form an idea of the scope of the vast and rapidly growing field of mathematics and the many career options, and begin to map out steps toward a potential career path. Mathematics is a diverse discipline that is constantly evolving. It ranges from applied mathematics (tailored to specific real world problems), to mathematical physics (which crafts the mathematical basis for the understanding of physical phenomena), to pure mathematics (which is studied for its intrinsic interest). As the study of such varied concepts as quantity, structure, space and change, mathematics has something for everyone; and valuable applications to many other fields, from business and finance to meteorology, chemistry, ecology and biology, among many others. This module aims to move beyond the foundational math generally taught in freshmen and sophomore year by presenting several areas of recent development and application. In this team-taught seminar-style course, two or three different professors will introduce students to their research areas and related topics. Some of the areas represented among the faculty include fractal geometry, number theory, algebraic geometry, and probability. Students will also be introduced to resources provided by national mathematical communities on mathematical career paths and backgrounds needed.

• MATH-265 Calculus III

Prerequisites:
MATH 166 with grade of C or better

Credits:
4.00
Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-331 Introduction to Abstract Math**

  **Prerequisites:**

  MATH-166 minimum grade of C

  **Credits:**

  4.00

  **Description:**

  This course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **MATH-431 Linear Algebra**

  **Prerequisites:**

  Math 331 must have grade C or higher

  **Credits:**

  4.00

  **Description:**

- **MATH-432 Abstract Algebra**

  **Prerequisites:**
MATH 431
Credits:
4.00
Description:
An introduction to elementary group theory, including properties of groups, subgroups, first isomorphism theorem for groups, normal subgroups, finite group classification; elementary properties of rings, such as homomorphisms of rings, ideals, fields, Euclidean algorithm, rings of polynomials, factorization theory, integral domains, associates, primes and units in domains, and other topics in number theory. Prerequisite: MATH 431 with a grade of C or higher.

- MATH-462 Real Analysis
  Prerequisites:
  MATH 331 with at least a grade of C
  Credits:
  4.00
  Description:
  A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform continuity, pointwise and uniform convergence of functions, and an introduction to metric spaces.

- MATH-511 Launching a Career in Mathematics
  Prerequisites:
  Junior or Senior standing
  Credits:
  1.00
  Description:
  This team-taught course is designed to explore career opportunities in Mathematics in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

Choose two additional 4-credit Mathematics courses at the 200-, 300-, or 400-level
Choose one additional 4-credit Mathematics course at the 300- or 400-level

Complementary Major Requirements (2 courses and corresponding laboratories where applicable, 8 credits)

- **CMPSC-F131 Computer Science I**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This is a rigorous introduction to computer science in Java with an emphasis on problem solving, structured programming, object-oriented programming, and graphical user interfaces. Topics include expressions, input/output, control structures, intrinsic data types, classes and methods, iteration, top-down programming, arrays, graphical user interfaces, and elements of UML. Normally offered each semester.
  
  **Type:**
  
  Quantitative Reasoning
  
- **PHYS-151 University Physics I**
  
  **Prerequisites:**
  
  MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR
  
- **PHYS-L151 University Physics Lab I**
  
  **Prerequisites:**
  
  PHYS 151 concurrently
  
  **Credits:**
1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

Although not required, it is strongly recommended that Mathematics majors also take CMPSC-F132 Computer Science II and an internship in Mathematics. Note that the BA and BS degrees have an additional science requirement.

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Pure Mathematics Major Requirements
- Pure Mathematics Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

Minor Requirements: 5 courses, 20 credits

To qualify for a minor in Pure Mathematics, a student must successfully complete five courses (20 credits) with a GPA of at least 2.0, distributed as follows:

- MATH-165 Calculus I
  
  Prerequisites:
  
  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5
  
  Credits:
  
  4.00
  
  Description:
  
  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- MATH-166 Calculus II
Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-265 Calculus III

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-331 Introduction to Abstract Math

Prerequisites:

MATH-166 minimum grade of C

Credits:

4.00

Description:

This course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and
the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

Choose one additional 4-credit Mathematics course at the 200-, 300-, or 400-level

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Pure Mathematics Major Requirements
- Pure Mathematics Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

In both the Pure Mathematics and Mathematics with Actuarial Concentration majors, students who have an overall GPA of 3.0 or better and a GPA of 3.0 or better in the major will be eligible for honors. To achieve honors a student must take a course of four credits or more in an advanced mathematics topic. This will typically be an independent study. The course should lead to a project or a senior thesis, done under the direction of a faculty member. The topic of study will be agreed upon by the student and faculty member.

Choose one of the following:

- **MATH-400 Senior Project in Mathematics**
  
  **Prerequisites:**
  
  Instructor permission required.
  
  **Credits:**
  
  4.00

  **Description:**
  
  Students study a particular topic in mathematics and demonstrate their results in a final project.

- **MATH-510 Independent Study**

  **Credits:**
Description:

Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Pure Mathematics Major Requirements
- Pure Mathematics Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

- MATH-000 Mathshop - Bridge to College Math

  Credits:

  0.00

  Description:

  A NON-CREDIT, full semester workshop designed for students who need substantial review before starting MATH 104, MATH 106, OR MATH 121. Similar to a course, MATHSHOP meets three hours per week throughout the semester. Topics covered are tailored to the needs of students and include basic math material, basic algebra, graphing use of calculators, ways of dealing with math fears and study methods. Several sections normally offered each semester.

- MATH-075 Review of Math Concepts for Calculus

  Credits:

  0.00

  Description:

  The purpose of this non-credit course is to help engineering students review basic math contents and topics that will be used frequently in their major engineering courses. The course will cover basic algebra (for example, order of operations, exponents, simplifying algebraic expressions, combinations of operations and complex fractions), functions and graphs (including linear, polynomial, and rational, exponential and logarithmic functions) and basic
knowledge in trigonometric functions (for example angles and radian measures, right triangle trigonometry, graphs of Sine and Cosine functions)

- **MATH-104 Precalculus for Management & Social Sciences**
  
  **Prerequisites:**
  
  MATH level 2 or Mathshop
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A selection of topics in algebra and elementary analytic geometry including, (but not restricted to): properties of real numbers, linear equations and inequalities, absolute value equations and inequalities, polynomials, rational expressions, exponents and radicals, quadratic equations, functions, linear, quadratic and polynomial models, rational, exponential and logarithmic functions. Applications and graphs are stressed throughout the course. This course is intended to prepare students who have only had one year of high school algebra to take MATH 134. Students may not use this course alone to satisfy the C.A.S. math requirement. Qualifying math placement exam score required. Students who are not prepared for this course should take MATHSHOP. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

- **MATH-121 Precalculus With Elements of Calculus**
  
  **Prerequisites:**
  
  MATH-104 with a minimum grade of B or MATH level 4
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A review of topics in algebra, trigonometry and analytic geometry intended for students needing one additional semester of preparation before taking MATH 165. Students may not use this course alone to satisfy the CAS math requirement. Prerequisites: MATH 104 with B or MATH 108 with B or higher or qualifying placement exam score indicating solid grounding in intermediate algebra. 4 lecture hours plus 1 recitation session per week. Normally offered every semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students. This course cannot be taken for credit by a student who already has credit for a more advanced course.

- **MATH-128 Math for the Modern World**
  
  **Prerequisites:**
  
  MATH level 2, or Mathshop, or MATH-104
From the ISBN on a book, to buying a car, from the size of small chips in a cell phone, to the size of the national debt, or just reading a graph in the daily newspaper, mathematics plays an important and vital role in countless areas of life and your future career and courses included. Mathematics is both an art and a tool created by humans. The common bond is a way of thinking and a way of reasoning to describe and solve problems of many types. This course uses the context of modern real life problems to introduce math needed for literacy and problem solving in contemporary life and work. It uses a minimal amount of algebra and focuses on math models, concepts and basic math manipulations. It encourages students to move from anxiety about math, to using formulas well, to thinking critically in the math context to use math to solve problems and pose new problems. Topics include scientific notation, basic financial math, linear, exponential and polynomial models and an introduction to probability. (Formerly Math 132)

- **MATH-130 Topics in Finite Mathematics**

  **Prerequisites:**
  
  MATH-104, or MATH-121, or MATH level 3
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-132 Math-Art, Tool and Human Side**

  **Prerequisites:**
  
  MATH-000 or appropriate Math Placement Exam score. Course does not fulfill math requirement for SBS majors.
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Mathematics is both an art and a tool. It has been used in many ways in contemporary and ancient society. The common bond is a way of thinking and a way of using reason to solve problems and describe things of all sorts. The course is designed to cultivate an appreciation of the significance of mathematics in daily life and develop students’ mathematical reasoning. Topics will vary from section to section. Examples of topics that might be included are: the real meaning of a newspaper graph, methods to tally votes, fair division, routes and networks,
consumer mathematics, the 'real' cost of a house, shapes and patterns, fractals, soap film surfaces, prime numbers and encryption, new discoveries in mathematics.

- **MATH-134 Calculus for Management & Social Sciences**
  
  **Prerequisites:**
  
  MATH-104, MATH-121 or MATH level 4
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-164 Calculus 1 Bridge With Trigonometry**
  
  **Prerequisites:**
  
  Permission of Instructor
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course provides an alternative to MATH 165 (Calculus I) for those students who have taken MATH 134 (Calculus for Management and Social Sciences) but who do not have the trigonometric precalculus prerequisite (such as MATH 121) for MATH 165. In other words, the sequence MATH 134 / MATH 164 serves as an alternative to the sequence MATH 121 / MATH 165, and similarly prepares students to take MATH 166 (Calculus II). The course includes a thorough review of trigonometry and other precalculus topics. Aspects of limits and differentiation which students have already seen in MATH 134 are presented briefly, but in most cases with more emphasis on conceptual understanding, and often illustrated using more complicated examples. New calculus topics (i.e. not covered in MATH 134) include one-sided limits, special trigonometric limits, differentiability, derivatives of trigonometric functions and their inverses, derivatives of general inverse functions, logarithmic and implicit differentiation, related rates, L'Hopital's rule, intermediate values theorem, Rolle's theorem, mean values theorem, Newton's method, and linearization. 4 lecture hours plus 1 recitation session each week. Normally offered in spring.

- **MATH-165 Calculus I**
Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-166 Calculus II**

Prerequisites:

MATH-164 or MATH-165 with a minimum grade of C

Credits:

4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-200 Modern Mathematics and Career Exploration**

Prerequisites:

Freshman or Sophomore Status

Credits:

1.00

Description:

This one credit course aims to help freshmen and sophomore students form an idea of the scope of the vast and rapidly growing field of mathematics and the many career options, and begin to map out steps toward a potential career path. Mathematics is a diverse discipline that is constantly evolving. It ranges from applied mathematics (tailored to specific real world problems), to mathematical physics (which crafts the mathematical basis for the understanding of physical phenomena), to pure mathematics (which is studied for its intrinsic interest). As the
study of such varied concepts as quantity, structure, space and change, mathematics has something for
everyone; and valuable applications to many other fields, from business and finance to meteorology, chemistry,
ecology and biology, among many others. This module aims to move beyond the foundational math generally
taught in freshmen and sophomore year by presenting several areas of recent development and application. In
this team-taught seminar-style course, two or three different professors will introduce students to their research
areas and related topics. Some of the areas represented among the faculty include fractal geometry, number
theory, algebraic geometry, and probability. Students will also be introduced to resources provided by national
mathematical communities on mathematical career paths and backgrounds needed.

- **MATH-255 Probability and Statistics**

  Prerequisites:
  
  MATH-165 or MATH-164 with a grade of C or better

  Credits:
  
  4.00

  Description:

  Topics include: random variable and distribution; expectation and variance; special discrete/continuous
distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential
distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of
large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression
analysis. Offered as needed.

- **MATH-256 Statistics With R**

  Prerequisites:

  MATH 255 or permission of instructor

  Credits:

  1.00

  Description:

  The course uses free software R to introduce key concepts in statistics. Topics include Descriptive statistics and
graphics, One- and two-sample tests, Regression and correlation, and Analysis of variance. Data from financial
markets or computer networks will be used for homework assignments and projects. We will focus on hands on
experiences with R rather than theoretical details about statistical analysis.

- **MATH-265 Calculus III**

  Prerequisites:

  MATH 166 with grade of C or better

  Credits:
Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- MATH-285 Discrete Mathematics
  
  Prerequisites:

  MATH-164 or MATH-165 with a grade of C or better

  Credits:

  4.00

  Description:

  Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- MATH-290 Financial Mathematics I
  
  Prerequisites:

  MATH-166, 164 or 165 with a minimum grade of C

  Credits:

  4.00

  Description:

  This course is mainly designed for students who are interested in financial mathematics and/or actuarial sciences, especially if they plan to take the second actuarial exam, and/or if they plan to study more in financial mathematics. The materials covered include time value of money, annuities, loans, bonds, cash flows and portfolios, general derivatives, options, hedging and investment strategies, forwards and futures, and swaps.

  Type:

  Expanded Classroom Requirement
MATH-331 Introduction to Abstract Math

Prerequisites:
MATH-166 minimum grade of C

Credits:
4.00

Description:
this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

MATH-373 Ordinary Differential Equations

Prerequisites:
MATH-265 (may be taken concurrently)

Credits:
4.00

Description:
A first course in differential equations. Topics generally include separable, homogenous, exact, and linear first order differential equations; variations of parameters, differential operators, the Laplace transform, inverse transforms, systems of differential equations, power series solutions, Fourier series, and applications.

MATH-400 Senior Project in Mathematics

Prerequisites:
Instructor permission required.

Credits:
4.00

Description:
Students study a particular topic in mathematics and demonstrate their results in a final project.

MATH-431 Linear Algebra
Prerequisites:
Math 331 must have grade C or higher

Credits:
4.00

Description:

- **MATH-432 Abstract Algebra**

  Prerequisites:
  MATH 431

  Credits:
  4.00

  Description:
  An introduction to elementary group theory, including properties of groups, subgroups, first isomorphism theorem for groups, normal subgroups, finite group classification; elementary properties of rings, such as homomorphisms of rings, ideals, fields, Euclidean algorithm, rings of polynomials, factorization theory, integral domains, associates, primes and units in domains, and other topics in number theory. Prerequisite: MATH 431 with a grade of C or higher.

- **MATH-462 Real Analysis**

  Prerequisites:
  MATH 331 with at least a grade of C

  Credits:
  4.00

  Description:
  A detailed treatment of the basic concepts of analysis including the real numbers; completeness and its equivalence to other properties of the reals such as monotone convergence, Archimedean property, Bolzano-Weierstrass theorem; the topology of Euclidean spaces, compactness and the Heine-Borel theorem, connectedness, continuity and uniform continuity and uniform continuity, pointwise and uniform convergence of functions, and an introduction to metric spaces.
- **MATH-481 Complex Analysis I**

  **Prerequisites:**
  
  MATH 462

  **Credits:**
  
  4.00

  **Description:**
  
  Construction and properties of complex numbers, calculus in the complex plane, analytic functions, contour integrals and the basics of Cauchy theory, power series representations. Prerequisite: MATH 331 or instructor's consent.

- **MATH-510 Independent Study**

  **Credits:**
  
  4.00

  **Description:**
  
  Members of the department will hold conference hours with students and will direct their readings and study of topics in mathematics which may be of interest to them. Prerequisite: Consent of instructor. 1 term - credits to be arranged.

- **MATH-511 Launching a Career in Mathematics**

  **Prerequisites:**
  
  Junior or Senior standing

  **Credits:**
  
  1.00

  **Description:**
  
  This team-taught course is designed to explore career opportunities in Mathematics in depth. This course focuses on career search, the application process, entry, transition and networking for career success. Alternative options such as graduate school will also be explored. Students articulate and reflect on academic work, and co-curricular experiences from the perspective of professionals entering or advancing their careers. The goal of this course is to help students reach their fullest professional potential following graduation.

- **MATH-R104 Recitation for Pre-Calculus for Management and Social Sciences**

  **Prerequisites:**
  
  Appropriate Math Placement Exam score. Must be taken concurrently with MATH 104
Credits:
0.00

Description:

Taken simultaneously with Math 104. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R128 Recitation for Math for the Modern World**

  Prerequisites:

  MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 128. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

  Credits:

  0.00

  Description:

  Hands on problem solving, discussion and examples of Math for the Modern World.

- **MATH-R130 Recitation for Finite Mathematics**

  Prerequisites:

  MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 130

  Credits:

  0.00

  Description:

  Taken simultaneously with Math 130. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do on line work such as lecture demonstration of additional examples or homework projects.

- **MATH-R132 Recitation for Math-Art, Tool and Humanside**

  Prerequisites:

  MATH-000 or appropriate Math Placement Exam score. Must be taken concurrently with MATH 132. This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.
Credits:

0.00

Description:

Taken simultaneously with Math 132. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do online work such as lecture demonstration of additional examples or homework projects.

• MATH-R134 Recitation for Calculus for Management And Social Sciences

Prerequisites:

MATH 104 or appropriate math placement score. Must be taken concurrently with MATH 134.

Credits:

0.00

Description:

Taken simultaneously with Math 134. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. Such work can include practice problems, homework problems and sometimes quizzes on a laptop as well as question-answer time and group project work. On alternate weeks students do online work such as lecture demonstration of additional examples or homework projects.
2016-2017 Archived Catalog Information

Pure Mathematics

The Mathematics & Computer Science Department offers two Mathematics major programs: Pure Mathematics and Mathematics with Actuarial Concentration.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Pure Mathematics Major Requirements
- Pure Mathematics Minor Requirements
- Honors
- Mathematics Courses
- Math Statistics Courses

- STATS-240 Introduction to Statistics

  Prerequisites:

  Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201(prerequisite for ISOM 319)

  Credits:

  4.00

  Description:

  Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

  Type:

  Quantitative Reasoning

- STATS-250 Applied Statistics

  Prerequisites:
MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:

Quantitative Reasoning

- STATS-H250 Honors Applied Statistics

Prerequisites:

MATH-128, MATH 130, 134, 146, 164 or 165 and Honors Course; GPA of 3.3 or higher

Credits:

4.00

Description:

Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

Type:

Quantitative Reasoning, Honors

- STATS-350 Applied Statistical Methods

Prerequisites:

STATS 250

Credits:

4.00
This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts. The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

- STATS-R240 Statistics Recitation

Credits:
0.00

Description:

This course is taken as a co-requisite to Stats240. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students work on individual and group homework.
2016-2017 Archived Catalog Information

Radiation Science & Therapy

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Radiation Science Major Requirements
- Radiation Therapy Major Requirements
- Minor Requirements
- Radiation Science & Therapy Courses

Radiation Science Major Requirements: 20 courses and corresponding laboratories, 77 credits

Clinical training is not included as part of the Radiation Science degree.

Core Requirements (13 courses and corresponding laboratories where applicable, 49 credits)

- SCI-108 Introduction to Cancer Care

  Credits:

  4.00

  Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR, NATURAL SCIENCE FOR BS
• BIO-111 Introduction to the Cell

Prerequisites:
Must take BIO L111 concurrently

Credits:
3.00

Description:
Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-L111 Introduction to the Cell Laboratory

Prerequisites:
Concurrently with BIO 111

Credits:
1.00

Description:
Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-203 Anatomy and Physiology I

Prerequisites:
BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.
First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:
Offered Fall Term

• BIO-L203 Anatomy & Physiology Lab I

Prerequisites:
BIO 111/L111; Must take BIO-203 concurrently

Credits:
1.00

Description:
A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:
Offered Fall Term

• BIO-204 Anatomy and Physiology II

Prerequisites:
BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:
3.00

Description:
Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:
- **BIO-L204 Anatomy & Physiology Lab II**

  Prerequisites:
  
  BIO 203/L203 and BIO 204 must be taken concurrently;
  
  Credits:
  
  1.00
  
  Description:
  
  A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.
  
  Term:
  
  Offered Spring Term

- **BIO-302 Writing for Research**

  Prerequisites:
  
  BIO 111/L111 and WRI 101, WRI 102, or WRI-103. BIO and Radiation Therapy majors with junior standing only.
  
  Credits:
  
  4.00
  
  Description:
  
  Development of skills for writing clearly, concisely, and creatively in the style of scientific journals. This course emphasizes the formulation of a research project of the student's choice and leads to a formal manuscript on the topic. Instruction includes literature search methods and software for the graphical presentation of data. Professional development, including the preparation of job application materials and in-person interview skills, is also an integral part of this course. Required of all biology and radiation science majors. Junior standing required.
  
  Term:
  
  Offered Both Fall and Spring

- **CAS-201 College to Career: Explore Your Options And Find Your Path**

  Prerequisites:
  
  CAS students only. SBS students by special permission. Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.
This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- CHEM-111 General Chemistry I

  Prerequisites:
  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

  Credits:
  3.00

  Description:
  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

  Term:
  Offered Both Fall and Spring

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- CHEM-L111 General Chemistry Laboratory I

  Prerequisites:
  MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

  Credits:
  1.00

  Description:
  Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature,
and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **CHEM-112 General Chemistry II**

  Prerequisites:
  CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

  Credits:
  3.00

  Description:
  This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

  Term:
  Offered Both Fall and Spring

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **CHEM-L112 General Chemistry Laboratory II**

  Prerequisites:
  MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

  Credits:
  1.00

  Description:
  This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer's Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.
• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:

Offered Fall Term

• PHYS-L315 Radiation Physics I Lab

Prerequisites:

PHYS 315 concurrently

Credits:

1.00

Description:

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.
• PHYS-317 Radiation Physics II
  Prerequisites:
  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only
  Credits:
  4.00
  Description:
  This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412
  Term:
  Offered Spring Term

• CHEM-211 Organic Chemistry I
  Prerequisites:
  CHEM 112 and CHEM-L112. CHEM-L211 must be taken concurrently.
  Credits:
  3.00
  Description:
  Introduces basic theories of structure, bonding, and chemical reactivity as specifically applied to modern organic chemistry. Includes functional groups, acid/base chemistry, nomenclature, resonance, spectroscopy, and stereochemistry.
  Term:
  Offered Both Fall and Spring

• CHEM-L211 Organic Chemistry Laboratory I
  Prerequisites:
  CHEM-112 and CHEM-L112. Must be taken concurrently with CHEM 211.
Introduces synthetic organic chemistry techniques. Includes melting point determination, distillation, crystallization, extraction, chromatographic separations, and infrared spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:
Offered Both Fall and Spring

• CHEM-212 Organic Chemistry II

Prerequisites:
CHEM 211 and CHEM L211. Must take CHEM-L212 concurrently.

Credits:
3.00

Description:
Builds on the core competencies acquired in Organic Chemistry I. Includes detailed mechanistic discussions of substitution, elimination, and addition reactions. Emphasizes organic synthesis, structure determination, and spectroscopy.

Term:
Offered Both Fall and Spring

• CHEM-L212 Organic Chemistry Laboratory II

Prerequisites:
CHEM-211 and CHEM-L211. Must be take CHEM-212 concurrently.

Credits:
1.00

Description:
Builds on the core competencies acquired in Organic Chemistry Laboratory I. Emphasizes the characterization of organic molecules via nuclear magnetic resonance spectroscopy. Discusses experimental design within the context of green organic chemistry.

Term:
Offered Both Fall and Spring
• PHYS-416 Radiation Biology

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

Physics Requirement (2 courses and corresponding laboratories, 8 credits)

Choose one of the following sequences:

• PHYS-111 College Physics I

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:

Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

• PHYS-L111 College Physics Lab I
Prerequisites:
PHYS 111 concurrently

Credits:
1.00

Description:
Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **PHYS-112 College Physics II**

  Prerequisites:
  PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

  Credits:
  3.00

  Description:
  Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.

  Term:
  Offered Spring Term

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

  Prerequisites:
  PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

  Credits:
Description:
Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

or

- **PHYS-151 University Physics I**
  
  Prerequisites:
  MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

  Credits:
  3.00

  Description:
  Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

  Term:
  Offered Both Fall and Spring

  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **PHYS-L151 University Physics Lab I**
  
  Prerequisites:
  PHYS 151 concurrently

  Credits:
  1.00

  Description:
The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:
Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-152 University Physics II**

  Prerequisites:

  PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

  Credits:
  
  3.00

  Description:

  This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

  Term:
  
  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

- **PHYS-L152 University Physics Lab II**

  Prerequisites:

  PHYS 151 and L151 and PHYS 152 must be taken concurrently

  Credits:
  
  1.00

  Description:

  The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.
Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

Mathematics Requirement (1 course, 4 credits)

Choose one of the following:

- MATH-134 Calculus for Management & Social Sciences
  Prerequisites:
  MATH-104, MATH-121 or MATH level 4
  Credits: 4.00
  Description:
  A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- MATH-165 Calculus I
  Prerequisites:
  MATH-121 with a minimum grade of C, MATH-075, or MATH level 5
  Credits: 4.00
  Description:
  Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.
Note:

If planning to apply to the Medical Dosimetry Certificate program during senior year or after graduation, students must take both MATH-165 and MATH-166.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**
  
  **Prerequisites:**
  
  BIO 111/L111
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.
  
  **Term:**
  
  Offered Fall Term
  
  **Type:**
  
  Quantitative Reasoning

- **STATS-250 Applied Statistics**
  
  **Prerequisites:**
  
  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.
  
  **Type:**
• PSYCH-215 Behavioral Statistics

Prerequisites:

PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:

4.00

Description:

Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

Electives (3 courses and corresponding laboratories where applicable, 12 credits)

Choose three of the following:

• BIO-114 Organismal Biology

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR
- **BIO-L114 Organismal Biology Laboratory**
  
  **Prerequisites:**
  
  Must take BIO 114 concurrently
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  A series of laboratory experiences in evolution, diversity, anatomy and physiology.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  SCI TECH ENGNR

- **BIO-233 Human Nutrition**
  
  **Prerequisites:**
  
  BIO 111/L111 and BIO 114/L114;
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-262 Principles of Cell Culture**
  
  **Prerequisites:**
  
  BIO 111, L111 and BIO 114, L114 and CHEM 111, L111
  
  **Credits:**
  
  4.00
  
  **Description:**
The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

Term:
Offered Spring Term

- **BIO-274 Genetics**

  Prerequisites:
  BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

  Credits:
  3.00

  Description:
  An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

  Term:
  Offered Fall Term

- **BIO-L274 Genetics Lab**

  Prerequisites:
  BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

  Credits:
  1.00

  Description:
  Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include E. coli, B. subtilis, S. cerevisiae, D. melanogaster, S. fimicola, and C. elegans.

  Term:
  Offered Fall Term

- **BIO-285 Microbiology**

  Prerequisites:
BIO-111 and BIO-L111; BIO-L285 concurrently;

Credits:
3.00

Description:
Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:
Offered Spring Term

• BIO-L285 Microbiology Laboratory

Prerequisites:
BIO 111/L111; BIO 285 concurrently;

Credits:
1.00

Description:
Introduction to microbiological techniques and their applications to health, research and industry.

Term:
Offered Fall Term

• BIO-304 Comparative Animal Physiology

Prerequisites:
BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:
3.00

Description:
Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:
Offered Spring Term
• BIO-L304 Comp Animal Physiology Lab

Prerequisites:

BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:

1.00

Description:

Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

• BIO-360 Cancer Biology

Prerequisites:

BIO-111, BIO-L111, BIO-114, BIO-L114, BIO-274, and BIO-L274

Credits:

4.00

Description:

An examination of molecular and cellular mechanisms that lead to the development of cancer. Factors contributing to tumorigenesis, angiogenesis, and metastasis will be discussed; these factors, oncogenes, tumor suppressor genes, and signal transduction networks. In addition, an investigation of current strategies for cancer prevention and treatment will be considered.

• BIO-377 Immunology

Prerequisites:

BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:

3.00

Description:

The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:

Offered Spring Term
• BIO-L377 Immunology Laboratory

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system, immunoglobin purification, hemagglutination, enzyme immunoassay. Immunochemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

• BIO-385 Advanced Microbiology

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

4.00

Description:

The molecular mechanisms of host-microbe interactions and the epidemiology and public health aspects of microorganisms are stressed. Also covered are current topics in microbiology including antimicrobial therapy and resistance, emerging pathogens and novel applications of microbiology. Experimental design and troubleshooting skills are developed, using contemporary microbiology and molecular biology laboratory techniques. Taught alternate/odd years.

Term:

Offered Fall Term

• BIO-L385 Advanced Microbiology Lab

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:
Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:
Offered Spring Term

- **BIO-403 Cell Biology**

  Prerequisites:
  BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

  Credits:
  3.00

  Description:
  The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

  Term:
  Offered Fall Term

- **BIO-L403 Cell Biology Lab**

  Prerequisites:
  BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

  Credits:
  1.00

  Description:
  Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

  Term:
  Offered Fall Term

- **BIO-474 Molecular Genetics**

  Prerequisites:
  CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently
Credits:

3.00

Description:

An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

• **BIO-L474 Molecular Genetics Lab**

  Prerequisites:

  Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

  Credits:

  1.00

  Description:

  This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

  Term:

  Occasional

• **BIO-475 Developmental Biology**

  Prerequisites:

  BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

  Credits:

  3.00

  Description:

  This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

  Term:
• CHEM-314 Instrumental Analysis

Prerequisites:

CHEM 211; CHEM L314 must be taken concurrently.

Credits:

3.00

Description:

Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.

Term:

Offered Fall Term

• CHEM-L314 Instrumental Analysis Laboratory

Prerequisites:

CHEM L211; CHEM 314 must be taken concurrently

Credits:

1.00

Description:

Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

Term:

Offered Fall Term

• CHEM-331 Biochemistry I

Prerequisites:

CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:

3.00
Description:
Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and bioinformatics techniques.

Term:
Offered Fall Term

• CHEM-L331 Biochemical Techniques Lab

Prerequisites:
CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

Credits:
1.00

Description:
Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

Term:
Offered Fall Term

• CHEM-332 Biochemistry II

Prerequisites:
CHEM 331 and CHEM-L332 concurrently

Credits:
3.00

Description:
Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.

Term:
Offered Spring Term

• CHEM-390 Advanced Organic Chemistry
Prerequisites:
Prerequisite: CHEM 212.

Credits:
3.00

Description:
Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules.

Term:
Alternates Fall & Spring

**HLTH-301 Introduction to the U.S. Healthcare Systems**

Prerequisites:
Junior standing

Credits:
3.00

Description:
This course presents an overview of the origins, components, organization, and operation of the health system in the United States. It is an introduction to the major health issues and institutions, including the settings in which health services are delivered, providers of these services, and the public and private payers for services.

**HLTH-325 Legal Environment of Healthcare**

Credits:
3.00

Description:
Students investigate the structural and functional aspects of the legal, institutional, and political factors that condition the character of the US healthcare industry, the role of the healthcare manager, the legislative process, administrative policy-making, and national trends related to political parties and interest groups. Topics in healthcare law include medical malpractice, informed consent, confidentiality of patient information, healthcare liability, and administrative law.

**PHYS-215 Nanomaterials and the Energy Problem**

Prerequisites:
CHEM 111-112 or PHYS 111-112 Or Permission of Instructor
This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:

Occasional

- **MATH-130 Topics in Finite Mathematics**

  Prerequisites:
  
  MATH-104, or MATH-121, or MATH level 3

  Credits:
  
  4.00

  Description:

  Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-166 Calculus II**

  Prerequisites:

  MATH-164 or MATH-165 with a minimum grade of C

  Credits:

  4.00

  Description:

  Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.
• MATH-255 Probability and Statistics

Prerequisites:

MATH-165 or MATH-164 with a grade of C or better

Credits:

4.00

Description:

Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

• MATH-265 Calculus III

Prerequisites:

MATH 166 with grade of C or better

Credits:

4.00

Description:

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• MATH-285 Discrete Mathematics

Prerequisites:

MATH-164 or MATH-165 with a grade of C or better

Credits:

4.00

Description:

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of
• MATH-331 Introduction to Abstract Math

Prerequisites:

MATH-166 minimum grade of C

Credits:

4.00

Description:

This course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

• PSYCH-114 General Psychology

Credits:

4.00
Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **PSYCH-233 Child Development**

  **Prerequisites:**
  PSYCH 114

  **Credits:**
  4.00

  **Description:**
  Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

  **Term:**
  Offered Both Fall and Spring

  **Type:**
  Social Science

- **PSYCH-236 Psychology of the Family**

  **Credits:**
  4.00

  **Description:**
  Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

  **Term:**
- **PSYCH-321 Introduction to Counseling Skills**

  **Prerequisites:**
  
  PSYCH 114 and Sophomore standing
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.
  
  **Term:**
  
  Offered Fall Term

- **PSYCH-326 Abnormal Psychology**

  **Prerequisites:**
  
  PSYCH 114, and Sophomore standing or permission of the instructor
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.
  
  **Term:**
  
  Offered Both Fall and Spring

  **Type:**
  
  Social Science
• **PSYCH-333 Adult Development & Aging**

  Prerequisites:
  
  PSYCH 114 and Sophomore Standing.

  Credits:
  
  4.00

  Description:
  
  Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

  Term:
  
  Offered Both Fall and Spring

  Type:

  Social Science

• **PSYCH-336 Developmental Psychopathology**

  Prerequisites:
  
  PSYCH 114 and sophomore standing

  Credits:
  
  4.00

  Description:
  
  Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

  Term:
  
  Offered Fall Term

  Type:

  Social Science
• SOC-113 Introduction to Sociology

Credits:
4.00

Description:
An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:
Offered Both Fall and Spring

Type:
Social Science

• SOC-220 Childhood and Adolescence in Contemporary Society

Credits:
4.00

Description:
This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures, discussion, debates, and direct observation of children.

Term:
Occasional

• SOC-242 Law, Health & Human Rights

Credits:
4.00

Description:
This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:
Occasional
• SOC-253 Sociology of Health and Illness
  Credits:
  4.00
  Description:
  This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.
  Term:
  Occasional

• SOC-254 Sl-U.S. Health Care Landscapes
  Prerequisites:
  This course fulfills the ECR requirement.
  Credits:
  4.00
  Description:
  In this course students meet community needs by engaging in service-learning outside the classroom. In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.
  Term:
  Occasional
  Type:
  Expanded Classroom Requirement, Service Learning

• SOC-256 Sociology of Aging
  Credits:
  4.00
  Description:
Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:
Occasional

- **SOC-354 Death and Dying**
  
  Credits:
  4.00

  Description:
  An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

  Term:
Occasional

  Type:

  Diverse Perspectives

- **SOC-355 Women and Health**
  
  Credits:
  4.00

  Description:
  An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

  Term:
Occasional

- **SOC-357 Global Health and Healing**
  
  Credits:
  4.00

  Description:
An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:
Occasional

Type:
Cultural Diversity Opt B, Diverse Perspectives

Please check with the program director for potential Radiation Science elective approval of other biology, chemistry, physics, math, psychology, or sociology courses.

**Residency Requirement Policy**: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Radiation Science & Therapy

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Radiation Science Major Requirements
- Radiation Therapy Major Requirements
- Minor Requirements
- Radiation Science & Therapy Courses

Radiation Therapy Major Requirements: 22 courses and corresponding laboratories, 78 credits

Students must apply to this selective program in their sophomore year.

Core Requirements (17 courses and corresponding laboratories where applicable, 62 credits)

- SCI-108 Introduction to Cancer Care

  Credits:

  4.00

  Description:

  This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

  Term:

  Offered Fall Term
• **BIO-111 Introduction to the Cell**

  **Prerequisites:**
  
  Must take BIO L111 concurrently
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  SCI TECH ENGNR

• **BIO-L111 Introduction to the Cell Laboratory**

  **Prerequisites:**
  
  Concurrently with BIO 111
  
  **Credits:**
  
  1.00
  
  **Description:**
  
  Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  SCI TECH ENGNR
• BIO-203 Anatomy and Physiology I

Prerequisites:

BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.

Credits:

3.00

Description:

First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:

Offered Fall Term

• BIO-L203 Anatomy & Physiology Lab I

Prerequisites:

BIO 111/L111; Must take BIO-203 concurrently

Credits:

1.00

Description:

A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

Term:

Offered Fall Term

• BIO-204 Anatomy and Physiology II

Prerequisites:

BIO 203, BIO L203; BIO L204 must be taken concurrently;

Credits:

3.00

Description:
Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

Term:

Offered Spring Term

- **BIO-L204 Anatomy & Physiology Lab II**

  Prerequisites:

  BIO 203/L203 and BIO 204 must be taken concurrently;

  Credits:

  1.00

  Description:

  A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

  Term:

  Offered Spring Term

- **CHEM-111 General Chemistry I**

  Prerequisites:

  Placement at MATH 104 or better. Students who do not place at MATH 104 must take MATH 104 concurrently. Must be taken concurrently with CHEM-L111.

  Credits:

  3.00

  Description:

  Fundamental principles of chemistry are discussed. Introduces atomic structure, stoichiometry, the periodic table, the nature of chemical bonds, and chemical reactions. This course is recommended for science majors or those considering careers in the health sciences.

  Term:

  Offered Both Fall and Spring

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR
CHEM-L111 General Chemistry Laboratory I

Prerequisites:

MATH-104 MATH-108 MATH-121 MATH-128 MATH-130 MATH-134 MATH-164 MATH-165 MATHT-MPEL1 MATHT-MPEL2 or MATHT-MPEL3. Must be taken concurrently with CHEM 111.

Credits:
1.00

Description:

Introduces the basic principles of chemistry through discovery laboratory experiments. Learn safe laboratory practices and basic techniques such as determining mass and volume, representing data in the form of tables and graphs, and synthesizing and isolating a metal complex. Participate in workshop activities that include understanding modern approaches to the scientific method, reading and understanding the scientific literature, and building molecular models. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

CHEM-112 General Chemistry II

Prerequisites:

CHEM 111/L111; CHEM-L112 must be taken concurrently. MATH 104 placement or higher.

Credits:
3.00

Description:

This course is a continuation of General Chemistry I. Fundamental principles of chemistry are discussed. Introduces thermochemistry, gases, solution chemistry, chemical kinetics, chemical equilibrium, acid-base systems, and thermodynamics.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

CHEM-L112 General Chemistry Laboratory II
Prerequisites:
MATHT-MPEL0 MATHT-MPEL1 MATHT-MPEL2 MATHT-MPEL3 MATH-104 MATH-130 MATH-134 MATH-164 or MATH-165. CHEM 112 must be taken concurrently;

Credits:
1.00

Description:
This course is a continuation of General Chemistry I Laboratory. Apply the basic principles of chemistry through discovery laboratory experiments with an emphasis on quantitative analysis. Execute basic analytical techniques such as the application of Beer’s Law and acid-base titrations. This laboratory is designed around the foundational laboratory skills practiced by science students in a wide variety of majors.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

• PHYS-315 Radiation Physics I

Prerequisites:
PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:
3.00

Description:
Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:
Offered Fall Term

• PHYS-L315 Radiation Physics I Lab

Prerequisites:
This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:
Offered Fall Term

Type:
Expanded Classroom Requirement

- **PHYS-301 Clinical Radiation I**

  Prerequisites:
  
  PHYS 206; Radiation Therapy & Medical Dosimetry Students Only
  
  Credits:
  3.00

  Description:
  
  Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

  Term:
  Offered Spring Term

- **PHYS-L301 Radiation Therapy Rotation I**

  Prerequisites:
  
  Radiation Therapy Students Only
  
  Credits:
  1.00

  Description:
Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:
Offered Spring Term

- PHYS-317 Radiation Physics II
  
  Prerequisites:
  
  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only
  
  Credits:
  4.00
  
  Description:
  
  This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy.

  Term:
  Offered Spring Term

- PHYS-302 Clinical Radiation II
  
  Prerequisites:
  
  Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only
  
  Credits:
  3.00
  
  Description:
  
  This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

  Term:
  Offered Fall Term

- PHYS-L302 Radiation Therapy Rotation II
Prerequisites:
Radiation Therapy (Major or Certificate) Students Only

Credits:
1.00

Description:
Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:
Offered Fall Term

• PHYS-L303 Radiation Therapy Rotation III

Prerequisites:
PHYS L302; Radiation Therapy Students Only

Credits:
1.00

Description:
Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:
Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:
Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:
1.00

Description:
Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands-on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:
Summer

Type:
Expanded Classroom Requirement

- **PHYS-415 Dosimetry I**

  Prerequisites:
  
  PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

  Credits:
  3.00

  Description:
  
  This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

  Term:
  Offered Spring Term

- **PHYS-L415 Dosimetry I Lab**

  Prerequisites:
  
  PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

  Credits:
  1.00

  Description:
  
  This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

  Term:
  Offered Spring Term
• PHYS-416 Radiation Biology

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

• PHYS-420 Radiation Oncology & Pathology

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:

Offered Fall Term

• PHYS-422 Radiology

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00
This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

• PHYS-475 Senior Seminar for Radiation Therapy

Prerequisites:

Senior status, Radiation Therapy Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Physics Requirement (2 courses and corresponding laboratories, 8 credits)

Choose one of the following sequences:

• PHYS-111 College Physics I

Prerequisites:

Take MATH-121 or MATH-134 or permission of Physics department chair; PHYS L111 taken concurrently

Credits:

3.00

Description:
Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

**PHYS-L111 College Physics Lab I**

Prerequisites:
PHYS 111 concurrently

Credits:
1.00

Description:
Introduction to the fundamental principles of physics. Study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and thermodynamics, kinetic theory. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks and formal reports required.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

**PHYS-112 College Physics II**

Prerequisites:
PHYS-111 and PHYS-L11. Must be taken concurrently with PHYS-L112.

Credits:
3.00

Description:
Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics.
Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

- **PHYS-L112 College Physics Lab II**

  Prerequisites:
  PHYS 111 and PHYS L111; PHYS 112 must be taken concurrently

  Credits:
  1.00

  Description:
  Continuation of the fundamental principles of physics. Study of electric forces and fields, electric potential, DC circuits, electromagnetic induction, magnetic fields, AC circuits, introduction to optics, introduction to atomic, nuclear and particle physics. The laboratory consists of experiments to illustrate the basic concepts studied in the course. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

  Term:
  Offered Spring Term

- **PHYS-151 University Physics I**

  Prerequisites:
  MATH-121, MATH-165 or MATH-164 and PHYS L151 concurrently

  Credits:
  3.00

  Description:
  Introduction to the fundamental principles of physics using calculus. The course includes the study of vectors, Newton's laws, rotations, rigid body statics and dynamics, simple harmonic motion, heat and temperature.

  Term:
  Offered Both Fall and Spring
• PHYS-L151 University Physics Lab I

Prerequisites:

PHYS 151 concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: measurements, propagation of errors, vectors, Newton's laws, work and energy, momentum, rotations, oscillations, simple harmonic motion, fluid. Knowledge of algebra, trigonometry, differentiation and integration required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR

• PHYS-152 University Physics II

Prerequisites:

PHYS-151 and PHYS-L151. Must be taken concurrently with PHYS-L152.

Credits:

3.00

Description:

This calculus based course begins with topics in kinetic theory and the laws of thermodynamics. It then covers electric charge and field, Gauss' law, electrical potential and capacitance, electric currents and DC circuits. Next magnetism, electromagnetic induction, Faraday's law and AC circuits are discussed. This is followed by Maxwell's equations, electromagnetic waves, and properties of light.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR
PHYS-L152 University Physics Lab II

Prerequisites:

PHYS 151 and L151 and PHYS 152 must be taken concurrently

Credits:

1.00

Description:

The laboratory consists of experiments to illustrate the basic concepts studied in the course: heat, gas laws, electric forces, field, and potential, DC and AC circuits, magnetic field, electromagnetic induction, Faraday's law, optics. Calculus, algebra, trigonometry are required. Error propagation, use of Excel, laboratory notebooks, and formal reports required.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS,SCI TECH ENGNR

Mathematics Requirement (1 course, 4 credits)

Choose one of the following:

- **MATH-134 Calculus for Management & Social Sciences**

  Prerequisites:

  MATH-104, MATH-121 or MATH level 4

  Credits:

  4.00

  Description:

  A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit differentiation, related rates, applications of derivatives to graphing, minima/maxima, applications of the derivative, marginal analysis, differential equations of growth and decay, anti-derivatives, the definite integral, the Fundamental Theorem of Calculus, area measurements. This course cannot be used to satisfy core or complementary requirements by students majoring in chemistry, computer science, engineering, mathematics, or physics. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-165 Calculus I**
Prerequisites:

MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:

4.00

Description:

Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Note:

If planning to apply to the Medical Dosimetry Certificate program during senior year or after graduation, students must take both MATH-165 and MATH-166.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- **BIO-273 Biostatistics**
  Prerequisites:
  
  BIO 111/L111
  
  Credits:
  
  4.00
  
  Description:
  
  Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.
  
  Term:
  
  Offered Fall Term
  
  Type:
  
  Quantitative Reasoning

- **STATS-250 Applied Statistics**
  Prerequisites:
MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

Credits:
4.00

Description:
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:
Quantitative Reasoning

• PSYCH-215 Behavioral Statistics

Prerequisites:
PSYCH 114; Restricted to majors only unless with permission of instructor.

Credits:
4.00

Description:
Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

Term:
Offered Both Fall and Spring

Type:
Quantitative Reasoning

Required Clinical Hours:
14 hours per week; Semester 2, Junior Year
40 hours per week; 12 week Summer Session
24 hours per week; Senior Year

Note:
The department reserves the right to require the withdrawal of a student from the Radiation Therapy major if, in its estimation, the probability of the student's success is doubtful. Factors such as academic performance, interest, effort,
If admitted into the Radiation Therapy major, part-time and full-time students must complete clinical requirements within three years of being admitted. Radiation Therapy graduates may seek employment immediately following graduation and will also be eligible to apply for the American Registry of Radiologic Technologists (ARRT) Radiation Therapy Certification Exam.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Radiation Science & Therapy

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Radiation Science Major Requirements
- Radiation Therapy Major Requirements
- Minor Requirements
- Radiation Science & Therapy Courses

Radiation Science Minor Requirements: 6 courses and corresponding laboratories, 24 credits

Core Requirements (5 courses and corresponding laboratories where applicable, 20 credits)

- SCI-108 Introduction to Cancer Care

  Credits:

  4.00

  Description:

  This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

  Term:

  Offered Fall Term

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGR, NATURAL SCIENCE FOR BS
• BIO-111 Introduction to the Cell

Prerequisites:
Must take BIO L111 concurrently

Credits:
3.00

Description:
Explanation of key biological structures and reactions of the cell. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-L111 Introduction to the Cell Laboratory

Prerequisites:
Concurrently with BIO 111

Credits:
1.00

Description:
Sessions are designed to familiarize the student with biological molecules, and the techniques used in their study. The techniques covered include basic solution preparation, separation and quantification of molecules, enzyme catalysis, and cell isolation.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

• BIO-203 Anatomy and Physiology I

Prerequisites:
BIO L203 MUST BE TAKEN CONCURRENTLY BIO 111, BIO L111.
Description:
First part of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course emphasizes histology and physiology in the understanding of the integumentary, skeletal, muscular, and nervous systems. Medical terminology will be used.

Term:
Offered Fall Term

- **BIO-L203 Anatomy & Physiology Lab I**
  
  Prerequisites:
  BIO 111/L111; Must take BIO-203 concurrently

  Credits:
  1.00

  Description:
  A study of the human skeletal system and a comparative look at other organ systems involving observation of anatomical models and dissection of mammalian specimens. Also includes microscopy and computer simulations of physiological processes.

  Term:
  Offered Fall Term

- **BIO-204 Anatomy and Physiology II**
  
  Prerequisites:
  BIO 203, BIO L203; BIO L204 must be taken concurrently;

  Credits:
  3.00

  Description:
  Conclusion of a systematic survey of the structural and functional interrelations of the organ systems of the human body. This course investigates the endocrine, circulatory, respiratory, digestive, urinary, and reproductive systems as well as the physiology of immune responses, nutrition, and acid-base balance. Medical terminology will be used.

  Term:
• **BIO-L204 Anatomy & Physiology Lab II**

  Prerequisites:

  BIO 203/L203 and BIO 204 must be taken concurrently;

  Credits:

  1.00

  Description:

  A study of the human viscera using anatomical models and dissection of mammalian specimens. Also includes microscopy of tissues and physiological experiments.

  Term:

  Offered Spring Term

• **PHYS-416 Radiation Biology**

  Prerequisites:

  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

  Credits:

  4.00

  Description:

  Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

  Term:

  Offered Spring Term

Radiation Science Elective (1 course and its corresponding laboratory where applicable, 4 credits)

Choose one of the following and corresponding laboratory where applicable:

• **BIO-114 Organismal Biology**

  Prerequisites:
Must take BIO L114 concurrently.

Credits:
3.00

Description:
Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:
Offered Both Fall and Spring

Type:
SCI TECH ENGNR

- **BIO-L114 Organismal Biology Laboratory**

  Prerequisites:
  Must take BIO 114 concurrently

  Credits:
  1.00

  Description:
  A series of laboratory experiences in evolution, diversity, anatomy and physiology.

  Term:
  Offered Both Fall and Spring

  Type:
  SCI TECH ENGNR

- **BIO-233 Human Nutrition**

  Prerequisites:
  BIO 111/L111 and BIO 114/L114;

  Credits:
  4.00

  Description:
This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.

- **BIO-262 Principles of Cell Culture**
  
  **Prerequisites:**
  
  BIO 111, L111 and BIO 114, L114 and CHEM 111, L111
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.
  
  **Term:**
  
  Offered Spring Term

- **BIO-274 Genetics**
  
  **Prerequisites:**
  
  BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;
  
  **Credits:**
  
  3.00
  
  **Description:**
  
  An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.
  
  **Term:**
  
  Offered Fall Term

- **BIO-L274 Genetics Lab**
  
  **Prerequisites:**
  
  BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.
Credits:
1.00

Description:
Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include E. coli, B. subtilis, S. cerevisiae, D. melanogaster, S. fimbicola, and C. elegans.

Term:
Offered Fall Term

- **BIO-285 Microbiology**

  Prerequisites:
  BIO-111 and BIO-L111; BIO-L285 concurrently;

  Credits:
  3.00

  Description:
  Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

  Term:
  Offered Spring Term

- **BIO-L285 Microbiology Laboratory**

  Prerequisites:
  BIO 111/L111; BIO 285 concurrently;

  Credits:
  1.00

  Description:
  Introduction to microbiological techniques and their applications to health, research and industry.

  Term:
  Offered Fall Term

- **BIO-304 Comparative Animal Physiology**
Prerequisites:
BIO-114 and BIO-L114. Must take BIO-L304 concurrently

Credits:
3.00

Description:
Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.

Term:
Offered Spring Term

• BIO-L304 Comp Animal Physiology Lab

Prerequisites:
BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:
1.00

Description:
Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

• BIO-377 Immunology

Prerequisites:
BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:
3.00

Description:
The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:
Offered Spring Term
• BIO-L377 Immunology Laboratory

Prerequisites:

BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:

1.00

Description:

Anatomy of the immune system, immunoglobin purification, hemagglutination, enzyme immunoassay. Immunochemistry, immunoelectrophoresis, gel precipitation assay.

Term:

Occasional

• BIO-385 Advanced Microbiology

Prerequisites:

BIO-285 and BIO-L285 BIO L385 must be taken concurrently

Credits:

4.00

Description:

The molecular mechanisms of host-microbe interactions and the epidemiology and public health aspects of microorganisms are stressed. Also covered are current topics in microbiology including antimicrobial therapy and resistance, emerging pathogens and novel applications of microbiology. Experimental design and troubleshooting skills are developed, using contemporary microbiology and molecular biology laboratory techniques. Taught alternate/odd years.

Term:

Offered Fall Term

• BIO-L385 Advanced Microbiology Lab

Prerequisites:

BIO 285/L285; BIO 385 must be taken concurrently

Credits:

1.00

Description:
Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.

Term:
Offered Spring Term

- **BIO-403 Cell Biology**
  
  Prerequisites:
  BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;
  
  Credits:
  3.00
  
  Description:
  The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.
  
  Term:
  Offered Fall Term

- **BIO-L403 Cell Biology Lab**
  
  Prerequisites:
  BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.
  
  Credits:
  1.00
  
  Description:
  Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.
  
  Term:
  Offered Fall Term

- **BIO-474 Molecular Genetics**
  
  Prerequisites:
  CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently
An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:

Occasional

**BIO-L474 Molecular Genetics Lab**

**Prerequisites:**

Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

**Credits:**

1.00

**Description:**

This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

**Term:**

Occasional

**BIO-475 Developmental Biology**

**Prerequisites:**

BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

**Credits:**

3.00

**Description:**

This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

**Term:**
• CHEM-314 Instrumental Analysis

Prerequisites:
CHEM 211; CHEM L314 must be taken concurrently.

Credits:
3.00

Description:
Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.

Term:
Offered Fall Term

• CHEM-L314 Instrumental Analysis Laboratory

Prerequisites:
CHEM L211; CHEM 314 must be taken concurrently

Credits:
1.00

Description:
Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.

Term:
Offered Fall Term

• CHEM-331 Biochemistry I

Prerequisites:
CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.

Credits:
3.00
Description:
Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and bioinformatics techniques.

Term:
Offered Fall Term

- CHEM-L331 Biochemical Techniques Lab

Prerequisites:
CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

Credits:
1.00

Description:
Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

Term:
Offered Fall Term

- CHEM-332 Biochemistry II

Prerequisites:
CHEM 331 and CHEM-L332 concurrently

Credits:
3.00

Description:
Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.

Term:
Offered Spring Term

- CHEM-355 Environmental Chemistry
Prerequisites:
CHEM 211, or permission of instructor

Credits:
3.00

Description:
A study of the chemical processes (including biologically mediated ones) that affect the cycling and ultimate fate of chemicals in the environment. Topics include air, water, and soil chemistry as well as energy and climate change. The effects of pollutant loads on natural systems and the remediation and treatment methods used to minimize pollutant loads are investigated. 3 hour lecture. Normally offered spring, odd numbered years.

Term:
Alternates Fall & Spring

- **CHEM-L355 Environmental Chemistry Lab**

  Prerequisites:
  CHEM 355 must be taken concurrently. Take CHEM-L211;

  Credits:
  1.00

  Description:
  Laboratory exercises designed to illustrate principles covered by topics in CHEM 355. Prerequisites: CHEM L211, concurrent enrollment in CHEM 355 required. 4-hour laboratory. Normally offered spring, odd numbered years.

  Term:
  Alternates Fall & Spring

- **CHEM-390 Advanced Organic Chemistry**

  Prerequisites:
  Prerequisite: CHEM 212.

  Credits:
  3.00

  Description:
  Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules.

  Term:
• HLTH-301 Introduction to the U.S. Healthcare Systems

Prerequisites:
Junior standing

Credits:
3.00

Description:
This course presents an overview of the origins, components, organization, and operation of the health system in the United States. It is an introduction to the major health issues and institutions, including the settings in which health services are delivered, providers of these services, and the public and private payers for services.

• HLTH-325 Legal Environment of Healthcare

Credits:
3.00

Description:
Students investigate the structural and functional aspects of the legal, institutional, and political factors that condition the character of the US healthcare industry, the role of the healthcare manager, the legislative process, administrative policy-making, and national trends related to political parties and interest groups. Topics in healthcare law include medical malpractice, informed consent, confidentiality of patient information, healthcare liability, and administrative law.

• PHYS-215 Nanomaterials and the Energy Problem

Prerequisites:
CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

Credits:
4.00

Description:
This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.
• **MATH-130 Topics in Finite Mathematics**

  **Prerequisites:**
  
  MATH-104, or MATH-121, or MATH level 3
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

• **MATH-166 Calculus II**

  **Prerequisites:**
  
  MATH-164 or MATH-165 with a minimum grade of C
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

• **MATH-255 Probability and Statistics**

  **Prerequisites:**
  
  MATH-165 or MATH-164 with a grade of C or better
  
  **Credits:**
  
  4.00
  
  **Description:**
Topics include: random variable and distribution; expectation and variance; special discrete/continuous distributions (uniform, binomial, negative binomial, geometric, hypergeometric, Poisson, normal, and exponential distributions); joint distribution, marginal distribution and conditional distribution; covariance; limit theorems (law of large numbers and central limit theorem); introduction to confidence interval and hypothesis testing; regression analysis. Offered as needed.

- **MATH-265 Calculus III**

  Prerequisites:

  MATH 166 with grade of C or better

  Credits:

  4.00

  Description:

  Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-285 Discrete Mathematics**

  Prerequisites:

  MATH-164 or MATH-165 with a grade of C or better

  Credits:

  4.00

  Description:

  Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning trees); finite state machines; methods of proof (proof by induction, proof by contradiction). Prerequisite: MATH 220 or permission of instructor. 1 term - 4 credits (4 lecture hours per week). Normally offered at least once each year.

- **MATH-331 Introduction to Abstract Math**

  Prerequisites:

  MATH-166 minimum grade of C

  Credits:
this course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

- **PHIL-363 Bio and Medical Ethics**

  **Prerequisites:**

  Prerequisite: Phil 119, or 123, or 127.

  **Credits:**

  4.00

  **Description:**

  An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

  **Term:**

  Occasional

- **PSYCH-114 General Psychology**

  **Credits:**

  4.00

  **Description:**

  Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

  **Term:**

  Offered Both Fall and Spring

  **Type:**

  Social Science
• PSYCH-233 Child Development

  Prerequisites:
  PSYCH 114

  Credits:
  4.00

  Description:
  Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

  Term:
  Offered Both Fall and Spring

  Type:
  Social Science

• PSYCH-236 Psychology of the Family

  Credits:
  4.00

  Description:
  Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

  Term:
  Offered Both Fall and Spring

  Type:
  Social Science

• PSYCH-321 Introduction to Counseling Skills

  Prerequisites:
  PSYCH 114 and Sophomore standing

  Credits:
4.00

Description:
Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

Term:
Offered Fall Term

Type:
Social Science

- **PSYCH-326 Abnormal Psychology**

  Prerequisites:
  
  PSYCH 114, and Sophomore standing or permission of the instructor

  Credits:
  4.00

  Description:
  Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

  Term:
  Offered Both Fall and Spring

  Type:
  Social Science

- **PSYCH-333 Adult Development & Aging**

  Prerequisites:
  
  PSYCH 114 and Sophomore Standing.

  Credits:
  4.00

  Description:
  Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development
and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

Term:
Offered Both Fall and Spring

Type:
Social Science

• PSYCH-336 Developmental Psychopathology

Prerequisites:
PSYCH 114 and sophomore standing

Credits:
4.00

Description:
Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

Term:
Offered Fall Term

Type:
Social Science

• SOC-113 Introduction to Sociology

Credits:
4.00

Description:
An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **SOC-220 Childhood and Adolescence in Contemporary Society**
  
  Credits:
  4.00
  
  Description:
  This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures, discussion, debates, and direct observation of children.

  Term:
  Occasional

- **SOC-242 Law, Health & Human Rights**
  
  Credits:
  4.00
  
  Description:
  This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

  Term:
  Occasional

- **SOC-253 Sociology of Health and Illness**
  
  Credits:
  4.00
  
  Description:
  This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public
debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:
Occasional

• SOC-254 Sl-U.S. Health Care Landscapes

   Prerequisites:
   This course fulfills the ECR requirement.

   Credits:
   4.00

   Description:
   In this course students meet community needs by engaging in service-learning outside the classroom. In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

   Term:
   Occasional

   Type:
   Expanded Classroom Requirement, Service Learning

• SOC-256 Sociology of Aging

   Credits:
   4.00

   Description:
   Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

   Term:
   Occasional

• SOC-354 Death and Dying
Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:

Diverse Perspectives

- **SOC-355 Women and Health**

  Credits:

  4.00

  Description:

  An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

  Term:

  Occasional

- **SOC-357 Global Health and Healing**

  Credits:

  4.00

  Description:

  An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt B, Diverse Perspectives
Please check with the program director for potential Radiation Science elective approval of other biology, chemistry, physics, math, psychology, or sociology courses.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

**SCI-108 Introduction to Cancer Care**

Credits:

4.00

Description:

This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:

Offered Fall Term

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR, NATURAL SCIENCE FOR BS

**PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only
Description:

This course will serve as an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

- **PHYS-301 Clinical Radiation I**

  **Prerequisites:**

  PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

  **Credits:**

  3.00

  **Description:**

  Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

  **Term:**

  Offered Spring Term

- **PHYS-L301 Radiation Therapy Rotation I**

  **Prerequisites:**

  Radiation Therapy Students Only

  **Credits:**

  1.00

  **Description:**

  Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.
PHYS-302 Clinical Radiation II

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
3.00

Description:
This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

Term:
Offered Spring Term

PHYS-L302 Radiation Therapy Rotation II

Prerequisites:
Radiation Therapy (Major or Certificate) Students Only

Credits:
1.00

Description:
Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:
Offered Fall Term

PHYS-L303 Radiation Therapy Rotation III

Prerequisites:
PHYS L302; Radiation Therapy Students Only

Credits:
Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:

Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands-on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:

3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units),
structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:
Offered Fall Term

- **PHYS-L315 Radiation Physics I Lab**

  Prerequisites:
  
  PHYS 315 concurrently

  Credits:
  
  1.00

  Description:
  
  This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

  Term:
  Offered Fall Term

  Type:

  Expanded Classroom Requirement

- **PHYS-317 Radiation Physics II**

  Prerequisites:
  
  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

  Credits:
  
  4.00

  Description:
  
  This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412
- **PHYS-415 Dosimetry I**

  Prerequisites:
  
  PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

  Credits:
  
  3.00

  Description:
  
  This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

- **PHYS-L415 Dosimetry I Lab**

  Prerequisites:
  
  PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

  Credits:
  
  1.00

  Description:
  
  This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

- **PHYS-416 Radiation Biology**

  Prerequisites:
  
  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)
Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:
Offered Spring Term

• PHYS-420 Radiation Oncology & Pathology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:

This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:
Offered Fall Term

• PHYS-422 Radiology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:

This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and
guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:

Offered Fall Term

- PHYS-475 Senior Seminar for Radiation Therapy

Prerequisites:

Senior status, Radiation Therapy Students Only

Credits:

4.00

Description:

This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Description:

Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:

Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:

Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:

1.00

Description:

Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists, the student will be guided toward the application of theory in the real world of cancer treatment.

Term:

Summer

Type:

Expanded Classroom Requirement

• PHYS-315 Radiation Physics I

Prerequisites:

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

Credits:
3.00

Description:

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units), structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and quality assurance.

Term:
Offered Fall Term

- **PHYS-L315 Radiation Physics I Lab**

  Prerequisites:

  PHYS 315 concurrently

  Credits:

  1.00

  Description:

  This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy, calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film, measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

  Term:

  Offered Fall Term

  Type:

  Expanded Classroom Requirement

- **PHYS-317 Radiation Physics II**

  Prerequisites:

  PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

  Credits:

  4.00

  Description:
This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:
Offered Spring Term

• PHYS-415 Dosimetry I

Prerequisites:
PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:
3.00

Description:
This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:
Offered Spring Term

• PHYS-L415 Dosimetry I Lab

Prerequisites:
PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:
1.00

Description:
This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:
Offered Spring Term

• PHYS-416 Radiation Biology
Prerequisites:
PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

Credits:
4.00

Description:
Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:
Offered Spring Term

• PHYS-420 Radiation Oncology & Pathology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:
Offered Fall Term

• PHYS-422 Radiology

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:
Offered Fall Term

- **PHYS-475 Senior Seminar for Radiation Therapy**

  Prerequisites:
  
  Senior status, Radiation Therapy Students Only

  Credits:

  4.00

  Description:

  This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

Mathematics Requirement (1 course, 4 credits)

Choose one of the following:

- **MATH-134 Calculus for Management & Social Sciences**

  Prerequisites:

  MATH-104, MATH-121 or MATH level 4

  Credits:

  4.00

  Description:

  A one-semester introduction to differential and integral calculus. Theory is presented informally and topics and techniques are limited to polynomials, rational functions, logarithmic and exponential functions. Topics include a review of precalculus, linear regression, limits and continuity, derivatives, differentiation rules, implicit
MATH-165 Calculus I

Prerequisites:
MATH-121 with a minimum grade of C, MATH-075, or MATH level 5

Credits:
4.00

Description:
Functions, limits and continuity; instantaneous rate of change, tangent slopes, and the definition of the derivative of a function; power, product, and quotient rules, trig derivatives, chain rule, implicit differentiation; higher order derivatives; applications (curve sketching, limits at infinity, optimization, differentials); other transcendental functions (inverse trig functions, exponential and log functions, hyperbolic trig functions); anti-derivatives; indefinite integrals; applications (net change). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

Note:
If planning to apply to the Medical Dosimetry Certificate program during year two or after graduation, students must take both MATH-165 and MATH-166.

Biostatistics Requirement (1 course, 4 credits)

Choose one of the following:

- BIO-273 Biostatistics

Prerequisites:
BIO 111/L111

Credits:
4.00

Description:
Introduction to the statistical methods used to evaluate biological problems. Sampling, probability, confidence intervals, hypothesis tests, experimental design, analysis of variance, regression, and correlation are some of the topics offered. Software for data handling, graphics, and analysis will be used.

Term:
Offered Fall Term

Type:
Quantitative Reasoning

- **STATS-250 Applied Statistics**

  Prerequisites:

  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

  Credits:
  4.00

  Description:

  Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analysis. The use of computers is emphasized throughout the course. Normally offered each semester.

  Type:
  Quantitative Reasoning

- **PSYCH-215 Behavioral Statistics**

  Prerequisites:

  PSYCH 114; Restricted to majors only unless with permission of instructor.

  Credits:
  4.00

  Description:

  Introduces the use of statistics as tools for description and decision-making, including hypothesis testing. Prepares students for the analysis, interpretation, and evaluation of psychological research. Required for psychology majors; should be taken before the junior year. Offered every semester.

  Term:
  Offered Both Fall and Spring

  Type:
  Quantitative Reasoning
Ethics Requirement (1 course, 4 credits)

Choose one of the following:

- **PHIL-119 Ethics**
  
  Credits:
  
  4.00
  
  Description:
  
  A systematic introduction to the major thinkers and their positions on the main issues of ethics, such as: What is morality? What are moral values? How should we live our lives? Are there objective, universal, absolute moral standards? If so, what are they, and what is their basis? 1 term - credits. Normally offered every year.
  
  Term:
  
  Offered Both Fall and Spring

- **PHIL-123 Social Ethics: The Good Life**
  
  Credits:
  
  4.00
  
  Description:
  
  An examination of contemporary Western society, particularly in the United States, in relation to philosophical attempts to define the good life. Current books that exhibit a philosophical approach towards important contemporary social issues will be discussed, as well as classics in philosophy. Topics may include: civic virtue, consumerism, current events, economic justice, popular culture (film, music, television), religion and secularism, etc. 1 term - 4 credits. Normally offered every year.
  
  Term:
  
  Offered Both Fall and Spring

- **PHIL-127 Contemporary Moral Issues**
  
  Credits:
  
  4.00
  
  Description:
  
  A critical examination of a number of contemporary moral issues such as: abortion, affirmative action, animal rights, capital punishment, cloning, drug legalization, environmental ethics, euthanasia, genetic engineering, gun control, pornography, same-sex marriage, suicide, war and terrorism, etc. 1 term - 4 credits. Normally offered every year.
  
  Term:
• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

Radiation Science Elective (1 course and its corresponding laboratory where applicable, 4 credits)

Choose one of the following:

• BIO-114 Organismal Biology

Prerequisites:

Must take BIO L114 concurrently.

Credits:

3.00

Description:

Rigorous introduction to organismal biology emphasizing evolution, phylogenetics, form, and function. This is an introductory course required of all biology majors and minors, and some non-biology science majors. This course is not recommended for the non-science student.

Term:

Offered Both Fall and Spring

Type:

SCI TECH ENGNR
- **BIO-L114 Organismal Biology Laboratory**
  
  Prerequisites:
  
  Must take BIO 114 concurrently
  
  Credits:
  
  1.00
  
  Description:
  
  A series of laboratory experiences in evolution, diversity, anatomy and physiology.
  
  Term:
  
  Offered Both Fall and Spring
  
  Type:
  
  SCI TECH ENGNR
  
- **BIO-233 Human Nutrition**
  
  Prerequisites:
  
  BIO 111/L111 and BIO 114/L114;
  
  Credits:
  
  4.00
  
  Description:
  
  This interactive introduction to nutrition explores the science of human nutrition and further reviews concepts of how nutrition can promote health and well being. The course will review specific nutrient needs and functions, nutrient digestion, and the role of diet in well being and in the presence of chronic disease. Weekly course work encourages scientific literacy and fosters critical evaluation of nutrition in the news and in social media.
  
- **BIO-262 Principles of Cell Culture**
  
  Prerequisites:
  
  BIO 111, L111 and BIO 114, L114 and CHEM 111, L111
  
  Credits:
  
  4.00
  
  Description:
  
  The course is designed as an application base educational experience that will allow students to learn the standard techniques associated with successful cell culture. As such, students are responsible for the
Maintenance, propagation, isolation, and preservation of their cells. A number of cell types and experimental manipulations of the cultures are investigated throughout the semester.

**Term:**
Offered Spring Term

- **BIO-274 Genetics**

  **Prerequisites:**
  BIO 111/L111 and BIO 114/L114; BIO L274 concurrently;

  **Credits:**
  3.00

  **Description:**
  An examination of the basic principles of genetics in eukaryotes and prokaryotes at the level of molecules, cells, and multicellular organisms, including humans. Topics include Mendelian and non-Mendelian inheritance, structure and function of chromosomes and genomes, biological variation resulting from recombination, mutation, and selection, and population genetics.

  **Term:**
  Offered Fall Term

- **BIO-L274 Genetics Lab**

  **Prerequisites:**
  BIO-111, BIO-L111, BIO-114, and BIO-L114. Must be taken concurrently with BIO 274.

  **Credits:**
  1.00

  **Description:**
  Experiments designed to demonstrate principles presented in lecture, using a range of genetic model organisms that include E. coli, B. subtilis, S. cerevisiae, D. melanogaster, S. fimicola, and C. elegans.

  **Term:**
  Offered Fall Term

- **BIO-285 Microbiology**

  **Prerequisites:**
  BIO-111 and BIO-L111; BIO-L285 concurrently;
Viruses and bacteria are surveyed in terms of their ecology, biochemistry, taxonomy, molecular biology and control.

Term:
Offered Spring Term

- **BIO-L285 Microbiology Laboratory**
  Prerequisites:
  BIO 111/L111; BIO 285 concurrently;
  Credits:
  1.00
  Description:
  Introduction to microbiological techniques and their applications to health, research and industry.
  Term:
  Offered Fall Term

- **BIO-304 Comparative Animal Physiology**
  Prerequisites:
  BIO-114 and BIO-L114. Must take BIO-L304 concurrently
  Credits:
  3.00
  Description:
  Mechanisms of physiological adaptations to environmental challenges are studied. Examples of gas exchange, osmoregulation, fluid transport, temperature regulation, nervous control, and movement are examined in various animal forms through class lecture and discussion, required readings, and external lectures. Spring semester.
  Term:
  Offered Spring Term

- **BIO-L304 Comp Animal Physiology Lab**
Prerequisites:
BIO-114 and BIO-L114. Must take BIO-304 concurrently.

Credits:
1.00

Description:
Selected physiological processes and mechanisms or adaptation in invertebrate and vertebrate animals are examined by observation and controlled experiments.

**BIO-360 Cancer Biology**

Prerequisites:
BIO-111, BIO-L111, BIO-114, BIO-L114, BIO-274, and BIO-L274

Credits:
4.00

Description:
An examination of molecular and cellular mechanisms that lead to the development of cancer. Factors contributing to tumorigenesis, angiogenesis, and metastasis will be discussed; these factors, oncogenes, tumor suppressor genes, and signal transduction networks. In addition, an investigation of current strategies for cancer prevention and treatment will be considered.

**BIO-377 Immunology**

Prerequisites:
BIO-114/L114; CHEM-211/L211; BIO-L377 concurrently;

Credits:
3.00

Description:
The concept of immunity, response to infection, structure of the immune system, biochemistry of immunoglobins, antigen-antibody interactions, allergy, immunological injury, lymphocyte subpopulations and cellular immunity, tolerance suppression and enhancement. Taught alternate/even years.

Term:
Offered Spring Term

**BIO-L377 Immunology Laboratory**
Prerequisites:
BIO-114 and BIO-L114 and CHEM-211 and CHEM-L211. Must take BIO-377 concurrently.

Credits:
1.00

Description:
Anatomy of the immune system, immunoglobin purification, hemagglutination, enzyme immunoassay. Immunochemistry, immunoelectrophoresis, gel precipitation assay.

Term:
Occasional

- **BIO-385 Advanced Microbiology**
  
  Prerequisites:
  BIO-285 and BIO-L285; BIO L385 must be taken concurrently
  
  Credits:
  4.00
  
  Description:
  The molecular mechanisms of host-microbe interactions and the epidemiology and public health aspects of microorganisms are stressed. Also covered are current topics in microbiology including antimicrobial therapy and resistance, emerging pathogens and novel applications of microbiology. Experimental design and troubleshooting skills are developed, using contemporary microbiology and molecular biology laboratory techniques. Taught alternate/odd years.
  
  Term:
  Offered Fall Term

- **BIO-L385 Advanced Microbiology Lab**
  
  Prerequisites:
  BIO 285/L285; BIO 385 must be taken concurrently
  
  Credits:
  1.00
  
  Description:
  Isolation, quantization and cultivation of microorganisms, advanced general and applied microbiology and molecular biology. Experience in media, chemical and culture preparations.
- **BIO-403 Cell Biology**

  Prerequisites:
  
  BIO 111/L111; CHEM-211/L211; BIO-L403 concurrently;

  Credits:
  
  3.00

  Description:
  
  The study of cells, approached through examinations of biochemical mechanisms, the relation between the structure and function of biological molecules and organelles, and the regulation of normal and diseased cells.

- **BIO-L403 Cell Biology Lab**

  Prerequisites:
  
  BIO-111 and BIO-L11 and CHEM-211 and CHEM-L211. Must take BIO-403 concurrently.

  Credits:
  
  1.00

  Description:
  
  Examination of biological molecules and their role in cell function. Techniques used in these examinations will include enzymatic analyses, gel electrophoresis, immunologic identification, chromatography, and spectroscopy. Students are expected to develop their proficiency in the laboratory techniques used, to analyze their results in a quantitative manner, and to present their findings.

- **BIO-474 Molecular Genetics**

  Prerequisites:
  
  CHEM-311 or BIO-274 and BIO-L274 and BIO-L474 concurrently

  Credits:
Description:
An examination of concepts and techniques of modern molecular biology. Topics include the structure and function of DNA, RNA, and proteins, the regulation of gene expression in prokaryotes and eukaryotes at transcriptional and post-transcriptional levels, genetic modification of organisms, and genome analysis. This course will incorporate readings and discussions of primary scientific literature. Spring semester.

Term:
Occasional

- **BIO-L474 Molecular Genetics Lab**

  Prerequisites:
  Take CHEM-331 or BIO-274 and BIO-L274. BIO-474 must be taken concurrently.

  Credits:
  1.00

  Description:
  This upper level laboratory course will consist of a semester-long project in the form of a series of consecutive experiments involving the generation of a genetically modified organism and its subsequent molecular analysis. Techniques employed will include genetic screens, DNA isolation, restriction endonuclease analysis, transformation of bacteria, gel electrophoresis, gene reported assays, RNA isolation, reverse transcription, and quantitative PCR.

  Term:
  Occasional

- **BIO-475 Developmental Biology**

  Prerequisites:
  BIO-114, L114 and CHEM-211, L211, and BIO-L475 concurrently

  Credits:
  3.00

  Description:
  This course focuses on embryonic development in vertebrates. The conceptual focus on evolutionary developmental biology includes comparative developmental mechanisms and Epigenetic processes.

  Term:
  Offered Fall Term
• CHEM-314 Instrumental Analysis
  
  Prerequisites:
  
  CHEM 211; CHEM L314 must be taken concurrently.
  
  Credits:
  
  3.00
  
  Description:
  
  Explores the basic techniques of collecting and analyzing data from different types of instrumentation, including: ultraviolet, visible, fluorescence, atomic and emission spectroscopy; chromatographic methods; electrochemical measurements. Students will apply these techniques to problems in chemistry, forensics, and environmental science.
  
  Term:
  
  Offered Fall Term
  
• CHEM-L314 Instrumental Analysis Laboratory
  
  Prerequisites:
  
  CHEM L211; CHEM 314 must be taken concurrently
  
  Credits:
  
  1.00
  
  Description:
  
  Laboratory experiments in chemical analysis using instrumental techniques, including spectroscopy and chromatography. Data collection and evaluation includes computer-based methods. Reports are prepared in professional style.
  
  Term:
  
  Offered Fall Term
  
• CHEM-331 Biochemistry I
  
  Prerequisites:
  
  CHEM 212/L212 or permission of instructor. CHEM L331 must be taken concurrently.
  
  Credits:
  
  3.00
  
  Description:
Explores the foundations of biochemistry, including the structure, organization and behavior of proteins, carbohydrates, lipids, and nucleic acids. Topics include enzyme catalysis, kinetics, and inhibition as well as protein regulation and membrane structure. Introduces the use of biochemical literature and bioinformatics techniques.

Term:
Offered Fall Term

- **CHEM-L331 Biochemical Techniques Lab**

  Prerequisites:
  
  CHEM 212/L212 or permission of instructor. CHEM 331 must be taken concurrently

  Credits:
  
  1.00

  Description:
  
  Laboratory course introducing biochemical techniques. Includes buffer preparation, PCR, purification of DNA and proteins, agarose and polyacrylamide gel electrophoresis, protein quantitation and detection, and enzyme kinetic assays.

  Term:
  
  Offered Fall Term

- **CHEM-332 Biochemistry II**

  Prerequisites:
  
  CHEM 331 and CHEM-L332 concurrently

  Credits:
  
  3.00

  Description:
  
  Explores the principles of bioenergetics and metabolism of biomolecules. Includes intermediary metabolism of carbohydrates, lipids, amino acids, and oxidative phosphorylation. Additional topics include signal transduction and the regulation and integration of metabolism.

  Term:
  
  Offered Spring Term

- **CHEM-390 Advanced Organic Chemistry**

  Prerequisites:
Prerequisite: CHEM 212.

Credits:
3.00

Description:
Expands on topics introduced in Organic Chemistry I and II; depending on student interest, may include in-depth discussions of carbonyl chemistry, industrial organic chemistry, organometallic chemistry and biomolecules.

Term:
Alternates Fall & Spring

- **HLTH-301 Introduction to the U.S. Healthcare Systems**
  
  Prerequisites:
  
  Junior standing

  Credits:
  3.00

  Description:
  This course presents an overview of the origins, components, organization, and operation of the health system in the United States. It is an introduction to the major health issues and institutions, including the settings in which health services are delivered, providers of these services, and the public and private payers for services.

- **HLTH-325 Legal Environment of Healthcare**

  Credits:
  3.00

  Description:
  Students investigate the structural and functional aspects of the legal, institutional, and political factors that condition the character of the US healthcare industry, the role of the healthcare manager, the legislative process, administrative policy-making, and national trends related to political parties and interest groups. Topics in healthcare law include medical malpractice, informed consent, confidentiality of patient information, healthcare liability, and administrative law.

- **PHYS-215 Nanomaterials and the Energy Problem**

  Prerequisites:
  
  CHEM 111-112 or PHYS 111-112 Or Permission of Instructor

  Credits:
This course is designed as an introduction to nanotechnology and some of its important uses. It is aimed at science majors who have taken basic courses in physics or chemistry. The course will cover the properties and uses of carbon-nanotubes, nanocomposites, and other nanomaterials that are being fabricated in labs and industries around the world. It will serve as an introduction to the important role of nanomaterials in solving modern-day energy problems.

Term:
Occasional

- **MATH-130 Topics in Finite Mathematics**

Prerequisites:
MATH-104, or MATH-121, or MATH level 3

Credits:
4.00

Description:

Linear Modeling (for example, using linear functions to model supply/demand situations), graphing, linear programming, financial functions (compound interest, annuities, and amortization of loans) sets, Venn diagrams, counting and combinatorics, discrete probability, conditional probability, Bernoulli experiments, Bayes theorem. Several sections offered each semester. *This course cannot be applied toward a departmental concentration in Mathematics by Sawyer Business School students.

- **MATH-166 Calculus II**

Prerequisites:
MATH-164 or MATH-165 with a minimum grade of C

Credits:
4.00

Description:

Riemann sums and definite integrals; Fundamental Theorem; applications (areas); integration of exponential functions, trig functions, and inverse trig functions; techniques of integration (by parts, trig substitution, partial fractions); area, volume, and average value applications; differential equations (separable, exponential growth, linear); infinite sequences and series; convergence tests; power series; Taylor and Maclaurin series (computation, convergence, error estimates, differentiation and integration of Taylor series). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

- **MATH-255 Probability and Statistics**
**MATH-265 Calculus III**

**Prerequisites:**

MATH 166 with grade of C or better

**Credits:**

4.00

**Description:**

Parametric equations and polar coordinates (curves, areas, conic sections); vectors and the geometry of space (the dot product, vector arithmetic, lines and planes in 3-space, the cross product, cylinders and quadratic surfaces); vector functions (limits, derivatives and integrals, motion in space); partial derivatives (functions of several variables, limits and continuity, tangent planes and differentials, chain rule, directional derivatives, gradient, extrema, Lagrange multipliers); multiple integrals (double integrals, applications); vector calculus (vector fields, line integrals, fundamental theorem for line integrals, Green's Theorem, curl and divergence, parametric surfaces, surface integrals). 4 lecture hours plus 1 recitation session each week. Normally offered each semester.

**MATH-285 Discrete Mathematics**

**Prerequisites:**

MATH-164 or MATH-165 with a grade of C or better

**Credits:**

4.00

**Description:**

Topics mostly selected from the following list: Logic and set theory, elementary number theory, relations and functions and their properties (equivalence relations, partial order relations, recurrence relations and their solutions); computational complexity of algorithms (big O notation); graphs and their properties (isomorphisms of graphs, Euler and Hamilton paths, shortest path problem, graph coloring) trees (tree traversal, minimum spanning
• MATH-331 Introduction to Abstract Math

Prerequisites:

MATH-166 minimum grade of C

Credits:

4.00

Description:

This course is intended to provide a firm foundation for and a taste of the study of advanced mathematics. While the course content varies somewhat, it is designed to give students a deeper understanding of the algebraic and analytical structure of the integers, the rational numbers and the real numbers and how they act as a building block to a variety of fields of mathematics. Students are introduced to the process of mathematical discovery and the language of mathematics. Exercises and projects are designed to illustrate the need for proof and to further refine the student's ability to analyze, conjecture and write mathematical proofs. This course is a prerequisite for most upper level mathematics courses and, after completing it a student will be in a position to determine realistically if he or she ought to major or minor in mathematics.

• PHIL-363 Bio and Medical Ethics

Prerequisites:

Prerequisite: Phil 119, or 123, or 127.

Credits:

4.00

Description:

An examination of the moral problems facing health-care practitioners, their patients, and others involved with the practice of medicine in today's society. Issues include euthanasia, the ethics of medical experimentation, the use of reproductive technologies, genetic counseling and genetic engineering, truth-telling and confidentiality in doctor-patient relationships, the cost and availability of medical care. Normally offered every third year.

Term:

Occasional

• PSYCH-114 General Psychology

Credits:

4.00

Description:
Surveys core theoretical concepts and contemporary empirical research from the major sub-fields of psychology: physiology; perception; cognition; learning; emotion; motivation; development; personality; psychopathology; psychotherapy; and social behavior. Required for psychology majors. Offered every semester.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **PSYCH-233 Child Development**

  Prerequisites:
  
  PSYCH 114

  Credits:
  4.00

  Description:
  Examines physical, cognitive, emotional, and social development in youth (i.e., from conception through adolescence). Surveys major developmental approaches including biological, learning, and contextual/environmental theories. Major focus is on normal development. Normally offered every semester.

  Term:
  Offered Both Fall and Spring

  Type:
  Social Science

- **PSYCH-236 Psychology of the Family**

  Credits:
  4.00

  Description:
  Focuses on the various forms and structures of families and family life over time and across cultures, with emphasis on the psychological impact of such forms. The complex relationship among individual psychology, family relationships, and the larger social context is addressed. Topics include marriage, parenting, and divorce. Normally offered every semester.

  Term:
  Offered Both Fall and Spring
• **PSYCH-321 Introduction to Counseling Skills**

  Prerequisites:
  PSYCH 114 and Sophomore standing

  Credits:
  4.00

  Description:
  Explores and examines basic models of helping and provides supervised practice of helping skills. Format includes lecture, discussion, role play, and video feedback. Normally offered yearly.

  Term:
  Offered Fall Term

• **PSYCH-326 Abnormal Psychology**

  Prerequisites:
  PSYCH 114, and Sophomore standing or permission of the instructor

  Credits:
  4.00

  Description:
  Introduces the concepts of psychological disorder and focuses on description and etiology of various mental health problems from a variety of different theoretical perspectives. Students develop familiarity with the DSM classification system and major disorders described within it, including mood and anxiety disorders, thought disorders, and personality disorders. Normally offered each semester.

  Term:
  Offered Both Fall and Spring

Type:
Social Science
• **PSYCH-333 Adult Development & Aging**

  Prerequisites:
  
  PSYCH 114 and Sophomore Standing.

  Credits:
  
  4.00

  Description:
  
  Surveys theory and research about the physical, mental, and psychological aspects of life-span development. Age-related changes in mental health, personality, self-image, sexual relations, friendships, career development and spirituality are explored. Aging may also be explored as a global, demographic and cross-cultural issue. Research surrounding death and dying, bereavement, and hospice/nursing home care is also presented. Normally offered alternate years.

  Term:
  
  Offered Both Fall and Spring

  Type:
  
  Social Science

• **PSYCH-336 Developmental Psychopathology**

  Prerequisites:
  
  PSYCH 114 and sophomore standing

  Credits:
  
  4.00

  Description:
  
  Examines the etiology and symptoms of disorders of childhood and adolescence, as well as current therapeutic approaches. Developmental changes in the incidence of externalizing disorders, such as conduct disorder and attention deficit disorder, and internalizing disorders, such as depression and eating disorders, are addressed. Disorders that affect both behavioral and mental functioning such as Fetal Alcohol Syndrome and autism may also be included. The role of development in the understanding and treatment of the childhood disorders is reviewed. Normally offered yearly.

  Term:
  
  Offered Fall Term

  Type:
  
  Social Science
• **SOC-113 Introduction to Sociology**

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

• **SOC-220 Childhood and Adolescence in Contemporary Society**

Credits:

4.00

Description:

This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.

Term:

Occasional

• **SOC-242 Law, Health & Human Rights**

Credits:

4.00

Description:

This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

Term:

Occasional
• **SOC-253 Sociology of Health and Illness**

  Credits:

  4.00

  Description:

  This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

  Term:

  Occasional

• **SOC-254 Sl-U.S. Health Care Landscapes**

  Prerequisites:

  This course fulfills the ECR requirement.

  Credits:

  4.00

  Description:

  In this course students meet community needs by engaging in service-learning outside the classroom. In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

  Term:

  Occasional

  Type:

  Expanded Classroom Requirement, Service Learning

• **SOC-256 Sociology of Aging**

  Credits:

  4.00

  Description:
Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:
Occasional

- **SOC-354 Death and Dying**

  Credits:
  4.00

  Description:
  An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

  Term:
  Occasional

  Type:
  Diverse Perspectives

- **SOC-355 Women and Health**

  Credits:
  4.00

  Description:
  An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

  Term:
  Occasional

- **SOC-357 Global Health and Healing**

  Credits:
  4.00

  Description:
An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

Term:
Occasional

Type:
Cultural Diversity Opt B,Diverse Perspectives

Please check with the program director for potential Radiation Science elective approval of other biology, chemistry, physics, math, psychology, or sociology courses.

Required Clinical Hours:

14 hours per week; Semester 2, Year 1
40 hours per week; 12 week Summer Session
24 hours per week, Year 2

Note:

The department reserves the right to require the withdrawal of a student from the Radiation Therapy certificate program if, in its estimation, the probability of the student's success is doubtful. Factors such as academic performance, interest, effort, professionalism, compliance, attendance, and suitability for the field will be considered. Issues or concerns correlated with any one of these factors could result in withdrawal of the student from the program. Students who defer entry into the program, for any reason, will forfeit their space in the program and will be required to reapply for the following year. A student may be dismissed from the Radiation Therapy program if they fail to maintain the minimum GPA of 3.0 or if they achieve a final grade lower than “B” in any of the Radiation Therapy courses listed above.

If admitted into the Radiation Therapy program, part-time and full-time students must complete clinical requirements within three years of being admitted. Radiation Therapy graduates may seek employment immediately following graduation and will also be eligible to apply for the American Registry of Radiologic Technologists (ARRT) Radiation Therapy Certification Exam.

Radiation Therapy Certificate

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Requirements**
- **Radiation Therapy Courses**
- **Gainful Employment Disclosure**

**PHYS-206 Introduction to Radiation Oncology**

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00

Description:

This course will serve an introduction to the role of the radiation therapist and medical dosimetrist in a Radiation Oncology department. Through a combination of detailed lectures, discussions, role-playing, case studies, and hands-on laboratory exercises, students will be introduced to the professional and clinical aspects of their respective professions. Additional topics included radiation safety, patients rights, infection control, communication for the clinic, patient assessment, and psychosocial aspects of cancer including death and dying.

Term:

Offered Fall Term

**PHYS-301 Clinical Radiation I**

Prerequisites:

PHYS 206; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00
Description:

Through a systems-based approach, this course will review anatomy and physiology while teaching medical terminology. This course will also discuss the major cancers associated with each anatomical system and introduce the student to radiation therapy treatment techniques and procedures.

Term:

Offered Spring Term

- **PHYS-L301 Radiation Therapy Rotation I**

  **Prerequisites:**
  
  Radiation Therapy Students Only

  **Credits:**
  
  1.00

  **Description:**
  
  Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

  Term:

  Offered Spring Term

- **PHYS-302 Clinical Radiation II**

  **Prerequisites:**
  
  Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

  **Credits:**
  
  3.00

  **Description:**
  
  This course is a continuation of MS 301. Through the same didactic approach, the course will cover all of the anatomical systems and their related medical terminology NOT covered in MS 301.

  Term:

  Offered Fall Term

- **PHYS-L302 Radiation Therapy Rotation II**
Prerequisites:
Radiation Therapy (Major or Certificate) Students Only

Credits:
1.00

Description:
Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:
Offered Fall Term

• PHYS-L303 Radiation Therapy Rotation III

Prerequisites:
PHYS L302; Radiation Therapy Students Only

Credits:
1.00

Description:
Provides the necessary clinical experience to become a radiation therapist. All labs are conducted at our clinical affiliates. Under the supervision of licensed radiation therapists, the students will become increasingly proficient in the manipulation of treatment equipment, will gain a thorough understanding of radiation treatment plans, will deliver a prescribed radiation dose to cancer patients, and will acquire knowledge of all relevant aspects of patient care. These labs are available only to students enrolled in the clinical track.

Term:
Offered Spring Term

• PHYS-L304 Radiation Therapy Practicum

Prerequisites:
Take PHYS-301 PHYS-L301;*Course fulfills the following: Expanded Classroom Requirement.

Credits:
1.00

Description:
Student radiation therapists will spend 12 weeks (full-time, 40 hrs/wk) gaining hands on patient care experience in
the department of radiation oncology at our clinical affiliates. Under constant supervision by licensed therapists,
the student will be guided toward the application of theory in the real world of cancer treatment.

Term:
Summer
Type:
Expanded Classroom Requirement

**PHYS-315 Radiation Physics I**

**Prerequisites:**

PHYS L315 concurrently; Radiation Biology, Radiation Science, Radiation Therapy (Major or Certificate), or Medical Dosimetry Students Only

**Credits:**

3.00

**Description:**

Content is designed to establish a thorough knowledge of the radiation physics used in radiation therapy
treatments. Topics to be covered in this course include a review of basic physics (energy, mass, matter, SI units),
structure of matter, types of radiations, nuclear transformations, radioactive decay, the fundamentals of x-ray
generators and x-ray production, interactions of x and gamma rays with matter, absorbed dose, measurements of
dose, principles of and practical use of ionization chambers and electrometers, Geiger counters and other survey
meters, principles and practical use of TLDs, film, calorimetry, scintillation detectors, radiation protection and
quality assurance.

Term:

Offered Fall Term

**PHYS-L315 Radiation Physics I Lab**

**Prerequisites:**

PHYS 315 concurrently

**Credits:**

1.00

**Description:**

This lab will cover a broad range of experiments associated with the Department of Radiation Oncology at
Massachusetts General Hospital. Topics include: Quality assurance measurements for radiation therapy,
calibration of radiation teletherapy unit using ionization chambers, measurements of dose distribution via film,
measurements of dose in a phantom via TLDs, radiation protection survey of therapy installation and brachytherapy sources, and radiation biology.

Term:
Offered Fall Term

Type:
Expanded Classroom Requirement

- PHYS-317 Radiation Physics II

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students Only

Credits:

4.00

Description:

This course is intended to expand on the concepts and theories presented in Radiation Physics I. It will provide a detailed analysis of the treatment units used in external beam radiation therapy, their beam geometry, basic dose calculations and dose distributions. This course will also cover the principles, theories, and uses of brachytherapy. This course was previously MS 412

Term:
Offered Spring Term

- PHYS-415 Dosimetry I

Prerequisites:

PHYS 315; PHYS L415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

3.00

Description:

This course will discuss the factors that influence treatment planning and govern the clinical aspects of patient treatment. Topics to be covered include treatment planning with 3-D CT and MRI beams, isodose plan descriptions, clinical applications of treatment beams and advanced dosimetric calculations. This course will also contrast new emerging technologies with conventional radiation therapy techniques (SRT, SRS, IMRT, Image Guided Therapy, Respiratory Gating).

Term:
Offered Spring Term
• PHYS-L415 Dosimetry I Lab

Prerequisites:

PHYS 415 concurrently; Radiation Therapy & Medical Dosimetry Students Only

Credits:

1.00

Description:

This lab will provide the student with the opportunity to apply clinical dosimetry principles and theories learned in the classroom to actual treatment planning situations within the clinic. Through hands-on lab exercises the student will demonstrate the use of the treatment planning instruments and interpret information they compute.

Term:

Offered Spring Term

• PHYS-416 Radiation Biology

Prerequisites:

PHYS 315; Radiation Science, Radiation Therapy and Medical Dosimetry Students only (including Radiation Science minors)

Credits:

4.00

Description:

Topics covered include: physio-chemical aspects of energy absorption, the sequence of events after irradiation occurring on the molecular, cellular and organized tissue levels, radiation response and repair of eukaryotic cells, effects of radiation quality, dose rate, environmental conditions, cell cycle kinetics, tumor and normal cell population dynamics, radiation-induced carcinogenesis and mutagenesis, tumor pathophysiology and radiobiology, and recent advances in experimental radiation oncology.

Term:

Offered Spring Term

• PHYS-420 Radiation Oncology & Pathology

Prerequisites:

Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:

4.00
This course, taught by Massachusetts General Hospital physicians will review cancer epidemiology, etiology, detection, diagnosis and prevention, lymphatic drainage, and treatment. The pathology(s) of each cancer will be presented in detail including the rationale for each preferred modality of treatment.

Term:
Offered Fall Term

**PHYS-422 Radiology**

Prerequisites:
Radiation Therapy (Major or Certificate) or Medical Dosimetry Students Only

Credits:
4.00

Description:
This course will begin with an introduction to radiology, reviewing x-ray production and discussing basic radiation physics, image formation (Kv, mA) and distortion (blur, magnification), conventional processing and digital imaging. The above-mentioned radiographic imaging concepts will be presented with conventional lectures as well as with several imaging laboratories. In addition, the basic principles of each imaging modality, including mammography, CT, MRI, Nuc Med, and Ultra Sound, will be presented. With the use of departmental tours and guest lecturers, the use, benefits and limitations of each will be discussed. Building upon the information previously presented, radiographic anatomy will also be covered with an emphasis on cross sectional anatomy. Students will review basic anatomy viewed in sectional planes (axial/transverse) of the body. Using CT and MRI images, the topographic relationship between internal organs and surface anatomy will be interpreted and discussed.

Term:
Offered Fall Term

**PHYS-475 Senior Seminar for Radiation Therapy**

Prerequisites:
Senior status, Radiation Therapy Students Only

Credits:
4.00

Description:
This course will be available to senior students enrolled in the Radiation Therapy and Medical Dosimetry programs. This seminar style course will serve a number of purposes; one will be to prepare our graduating students for board certification in their respective disciplines (AART for Radiation Therapy and MDCB for Medical Dosimetry). Exam preparation will include the use of lectures, student teaching, online teaching tools, mini mock
exams, and a full-length mock exam. The seminar will also assist students with the preparation of their professional resumes including discussions regarding the skills necessary to make job interviews successful.

- **SCI-108 Introduction to Cancer Care**

  **Credits:**

  4.00

  **Description:**

  This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

View the Federally Mandated Gainful Employment Disclosure for the Certificate in Radiation Therapy.
Religious Studies

The Religious Studies program is an interdisciplinary program designed to give students the opportunity to explore the various depths, dimensions, and meanings of world religions. Religious thought and doctrines--in both Western and non-western cultures from ancient civilizations to modern times--will be presented as a vehicle for expanding the various ways in which religious ideas and practices can be understood.

There is no major available in Religious Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements
- Religious Studies Courses

Minor Requirements: 5 courses, 20 credits

Core Requirement (1 Course, 4 Credits)

Choose one of the following:

- RS-111 Introduction to World Religions: Western Traditions
  
  Credits:
  
  4.00
  
  Description:
  
  This course will explore the comparative history and structure of Western religious traditions, broadly understood, and their impact on other world religions, while attempting to recognize the similarities and the differences among them. Traditions to be studied include Greek and Roman religion, the monotheistic faiths (Judaism, Christianity, and Islam, as well as Zoroastrianism, Sikhism and Bahaism). We will also explore the impact of the Western religions on indigenous traditions, such as African religion, Native American religion, and Pacific Island religion. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. 1 term - 4 credits. Normally offered every year.

Type:

Diverse Perspectives
• RS-112 Introduction to World Religions: Eastern Traditions

Credits:
4.00

Description:
This course will examine a variety of Eastern religions, including Hinduism, Buddhism, Jainism, Confucianism, Taoism, and Shintoism. Possible connections to be explored will be the impact of these traditions on others, such as Pacific Islands and African religion, as well as the growing place of Eastern religion in the West. This course will explore the history and structure of each tradition, while attempting to recognize the similarities and the differences among them. Attention will be given to the reading of original texts when available. Requiring students to observe religious ceremonies will enhance practical understanding of many of the above traditions. Normally offered every year. Cultural Diversity B

Type:
Cultural Diversity Opt B, Asian Studies, Diverse Perspectives

Electives (4 Courses, 16 Credits)

Choose four of the following:

• ENG-317 Classical Mythology

Prerequisites:
WRI-102 or WRI-H103

Credits:
4.00

Description:
Ancient Greek and Roman myths, their motifs, themes and interpretations. Normally offered every third year.

• GVT-208 Politics / Religion

Credits:
4.00

Description:
This course explores what major religions say about the status and responsibilities of the state and how, in turn, selective states have, in theory and practice, structured the place of religions in political life. Particular attention is given to issues of politics and religion in the United States. Cultural Diversity A

Type:
Cultural Diversity Opt A, Social Science, BSJ SOCIAL SCIENCE, Diverse Perspectives
• PHIL-260 Philosophy of Religion

Credits:
4.00

Description:
This course analyzes and interprets fundamental religious concepts and beliefs, examines the rational support for religious faith, and addresses the relation between religion and society. Fundamental questions concerning the nature and existence of God, salvation, and immortality will be explored, and for this the primary focus will be Western religious conceptions but may broaden to include other world religions. Other topics may include: whether all religions can be equally valid and true; the relation of religion and the state; the status of miracles; the history and psychology of religion; the conflict between religion and science. 1 term - 4 credits. Normally offered alternate years.

Term:
Occasional

Type:
Humanities & History, Humanities Literature Requirement

• PHIL-261 Eastern Philosophy

Credits:
4.00

Description:
The exposition and critical evaluation of Hinduism, Buddhism, Confucianism, Taoism, and Islam. Special attention is given to foundation principles as well as to the similarities and differences of each of these philosophies to basic ideas in Western philosophy. 1 term - 4 credits. Normally offered alternate years. C b

Term:
Occasional

Type:
Cultural Diversity Opt B, Cultural Diversity BFA, Humanities & History, Humanities Literature Requirement

• PHIL-262 Buddhism

Credits:
4.00

Description:
An historical survey of Buddhist philosophy. We will explore Buddhist origins, central teachings, devotional and meditational practices, ritual and institutions as developed from classical to modern times. Special attention given to the philosophical diversity of the Buddhist world view. 1 term - 4 credits. Normally offered alternate years.

**PHIL-263 Native American Religion**

**Credits:**
4.00

**Description:**
This course is an examination of Native American (Indian) religious experience, both the similarities and differences among the myths and rituals of the major tribes which comprise the background of our nation's history of Western migration and settlement. The emphasis will be on understanding how life was experienced by these peoples through a close look at the philosophical meanings of their mythology and ethics. 1 term - 4 credits. Normally offered alternate years.

**PHIL-265 Women in Spirituality**

**Credits:**
4.00

**Description:**
An exploration into the various dimensions and ideologies concerning the role of the feminine in relation to the Divine. Belief systems, myths and archetypes from ancient Goddess worship to 20th century feminist theology will be examined in terms of the philosophical content and psychological consequences. Special emphasis will be placed on feminist metaphysical structures for understanding consciousness and Reality. Classes will be conducted by means of lectures, primary and secondary texts and class discussions. Normally offered alternate years.
- **PHIL-267 Chinese Philosophy**

  **Credits:**
  4.00

  **Description:**
  A survey of the main developments in Chinese Philosophy. The course begins with the early dynastic concept of humanism and then turns to Confucius and Mencius. Having developed the central Confucian doctrines, students next examine the Taoist response to Confucianism in the writings of Lao Tzu and Chuang Tzu. The course then considers Zen Buddhism, which is called Ch’an Buddhism in China, where it originated. In particular, students study the concept of sudden enlightenment before turning to the Neo-Confucian scholars.

  **Term:**
  Occasional

  **Type:**
  Cultural Diversity Opt B, Diverse Perspectives

- **PHIL-330 African Philosophy and Religion**

  **Prerequisites:**
  One course in Philosophy or consent of instructor.

  **Credits:**
  4.00

  **Description:**
  This course explores indigenous African systems of thought, modern academic African philosophy, African social and political theory, and contemporary debates centered on questions of identity, modernity, essentialism and historicity within the African context. 1 term - 4 credits. Normally offered every third year. C b

  **Term:**
  Occasional

  **Type:**
  Cultural Diversity Opt B

- **RS-301 Reason and Revelation**
Traces the evolution of Judaism, Christianity and Islam to the High Middle Ages to explore the role of Neo-Platonism and Aristotelianism in clarifying and explaining dogma. Particular attention will be paid to ideas about the ways of knowing and rational proofs of God's existence in Philo of Alexandria, Augustine, Anselm, Ibn Rushd (Averroes), Aquinas and Maimonides. 1 term - 4 credits. Normally offered in alternate years.

SOC-226 Religion in Contemporary Society

Prerequisites:

This course fulfills the ECR requirement.

Description:

An examination of the fundamental purpose and functions of religion in society. Major religious systems in America are analyzed in terms of basic values and structure. The impact of changes in religious organizations upon clergy, laity and society are discussed. This class fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement

RS-510 Independent Study

Credits:

1.00- 4.00

Description:

Students meet with a department member to pursue advanced studies in areas of particular interest to them.

Special Topics

Some students may wish to include specialized research in their minor. They may do so by including as part of their program an independent study course of a field study project.
Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Religious Studies

The Religious Studies program is an interdisciplinary program designed to give students the opportunity to explore the various depths, dimensions, and meanings of world religions. Religious thought and doctrines--in both Western and non-western cultures from ancient civilizations to modern times--will be presented as a vehicle for expanding the various ways in which religious ideas and practices can be understood.

Science

No major available.

All science courses must be taken with their respective laboratories unless otherwise noted or waived by written permission from appropriate department chair.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Science Courses

- SCI-101 Physical Science I

  Prerequisites:

  One course of MATH 104,121,128(formerly 132),130,134, 164 or 165; SCI L101 taken concurrently

  Credits:

  3.00

  Description:

  Topics in the physical sciences treated at a level appropriate for non-science majors. Newton's laws, circular motion, heat, electricity and magnetism, optics, and atomic physics are discussed with problem sets required to illustrate the concepts.

  Term:

  Offered Fall Term

  Type:

  NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

- SCI-L101 Physical Science Lab I

  Prerequisites:
SCI 101 concurrently

Credits:
1.00

Description:
Laboratory experiments and exercises to illustrate the principles covered in Science 101. On-time attendance is mandatory for pre-lab lectures. Weekly lab write-ups completed during the lab.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

SCI-102 Intro to Physical Science II

Prerequisites:
One course of MATH 104 OR MATH 121 OR MATH 130 OR MATH 132 OR MATH 134 MATH 164 OR MATH 165. SCI L102 Must be taken concurrently

Credits:
3.00

Description:
Continuation of topics in the physical sciences for nonscience majors. Nuclear physics, chemical reactions, organic compounds, latitude and longitude, study of the solar system, astronomy, and cosmology are all covered.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,NATURAL SCIENCE FOR BS

SCI-L102 Physical Science Lab II

Prerequisites:
SCI 102 concurrently

Credits:
1.00

Description:
Laboratory experiments and exercises to illustrate the principles covered in Science 102. On-time attendance is mandatory for pre-lab lectures. Weekly lab write-ups completed during the lab.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS

• SCI-103 Environmental Science
  Prerequisites:
  SCI-L103 must be taken concurrently
  Credits:
  3.00
  Description:
  Case study approach to the fundamentals of science applied to environmental degradation, ecosystems, geological processes, population dynamics, deforestation and biodiversity, climate change, ozone depletion, air soil, and water resource management, pollution and risks to health, economics and the environment, politics and the environment, and ethics and the environment.
  Term:
  Offered Fall Term
  Type:
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

• SCI-L103 Environmental Science Lab
  Prerequisites:
  Must take SCI-103 concurrently
  Credits:
  1.00
  Description:
  Laboratory exercises to illustrate the topics covered in Science 103. Field-testing and analysis of environmental samples. Field trip required.
  Term:
  Offered Fall Term
• SCI-L105 Composite Science Lab

Prerequisites:
Permission of the department, transfer student status- 2 credits

Credits:
2.00

Description:
Combination of lecture and lab involving subject matter in the Physical Sciences (not Life Sciences). This is intended for transfer students who have received course credit in the physical sciences from another school and who still need to satisfy a two credit laboratory requirement.

Term:
Offered Both Fall and Spring

• SCI-L106 Composite Science Lab

Prerequisites:
Permission of the department, transfer student status- 1 credit

Credits:
1.00

Description:
Combination of lecture and lab involving subject matter in the Physical Sciences (not Life Sciences). This is intended for transfer students only who have received course credit in the physical sciences from another school and who still need to satisfy a one credit laboratory requirement.

Term:
Offered Both Fall and Spring

• SCI-108 Introduction to Cancer Care

Credits:
4.00

Description:
This course will introduce the students to the top ten U.S. adult cancers, as well as the most common pediatric cancers. Topics to be covered include cancer causes, detection, and prevention. Psychosocial aspects of being diagnosed with cancer and the role nutrition plays for cancer patients will be described. The course will also discuss the major treatment modalities for each cancer including radiation therapy, surgery, chemotherapy, and bone marrow transplants. The goals and objectives of the course will be met through the use of various teaching tools including but not limited to: PowerPoint presentations, videos, guest lectures, and a poster project with a presentation component. Cognitive assessment of the students will be accomplished through homework, quizzes, exams, and a group poster and oral presentation. Students with any type of academic background are welcome.

Term:
Offered Fall Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR, NATURAL SCIENCE FOR BS

- **SCI-111 Astronomy I**

  Prerequisites:
  
  MATH-128 or higher and SCI-L11 must be taken concurrently.

  Credits:
  
  3.00

  Description:
  
  History of Astronomy from the ancients to Newton; light; telescopes; sun, earth, moon planets, comets, asteroids, meteors; space programs, science and technology in society. For non-science majors.

  Term:
  
  Occasional

  Type:
  
  NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **SCI-L111 Astronomy Lab I**

  Prerequisites:
  
  SCI 111 concurrently

  Credits:
  
  1.00

  Description:
Laboratory experiments and exercises to illustrate the principles discussed in Science 111. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

Term: Occasional

Type: NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **SCI-112 Astronomy II**

  Prerequisites:
  
  MATH-128 or higher and SCI-L112 concurrently

  Credits:
  
  3.00

  Description:
  
  Astronomy of the cosmos; sun, stars, interstellar materials, galaxies, pulsars, quasars, black holes; nature of time relativity, cosmology. For non-science majors.

  Term: Occasional

  Type: NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

- **SCI-L112 Astronomy Lab II**

  Prerequisites:
  
  SCI 112 concurrently

  Credits:
  
  1.00

  Description:
  
  Laboratory experiments and exercises to illustrate the principles discussed in Science 112. Observational exercises using the Celestron telescope, astrophotography exercises, and computer simulations.

  Term: Occasional

  Type:
SCI-113 A Habitable Earth Within the Solar System

Credits:
4.00

Description:
This course introduces non-science majors to concepts that are central to making our planet habitable. It presents Earth in context of the solar system with a broad view of global climate change and energy resources in a quest to better understand the workings our planet. This course on Earth and Planetary Science is suitable for students who may have taken their last science and math course several years ago, or are just curious about knowing facts on major issues that pertain to the future of our planet. Together with a reading component, this course aims to give students a flavor of how researchers think, investigate and develop conclusions that directly affect our political and economic future. Topics covered in this course range from the solar system to the study of search for other habitable Earth-like planets, search for extraterrestrial life, and evolution of life on Earth. Other characteristics of this course are heavy use of audio-visual materials often including computer animations and simulations, in-class experiment demonstration, and intensive use of INTERNET-based resources.

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR

SCI-161 Physical Science

Prerequisites:
One course from MATH 104 OR MATH 121 OR MATH 130 OR MATH 134 OR MATH-164 OR MATH 165 or permission of Dept. Chair. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Credits:
4.00

Description:
This is a one-semester, non-lab introduction to the physical sciences. The student will obtain a good understanding of a wide variety of topics covered in selected chapters of the text (measurements, Newton's laws, energy, heat and global warming, wave motion, electricity and magnetism, atomic physics, nuclear physics, chemical reactions, and astronomy) and will be able to solve problems illustrating the most important concepts. Students who have taken SCI 101/L101 or SCI 102/L102 are not eligible to take SCI 161.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ
SCI-165 Inner Workings of Physics Universe

Credits:
4.00

Description:

About 15 billion years ago, (data indicate) the big bang occurred and the universe was born. With it came physical laws and a spectacular array of consequences that lead to the universe as we know it. This non-lab, 4 credit course explores the inner workings of the physical universe in terms of the scientific inquiry which lead to Newton's laws, an understanding of energy, waves, light, electricity, atomic structure, chemical reactions, nuclear physics, particle physics, relativity, and the big bang theory. During the course, students will learn to make use of modern resources to access scientific and technical literature to research a scientific topic. They will learn to distinguish between science and technology (e.g. quantum mechanics and nanotechnology, the discovery of the Higgs boson and the large hadron collider that made it possible, etc.) and to understand how the science, technology, and engineering disciplines play a crucial role in recognizing and solving problems of society and the world that we share.

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

SCI-171 The Built World: How Humans Engineer Environments

Credits:
4.00

Description:

The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR

SCI-H171 The Built World: How Humans Engineer Environments- Honors

Prerequisites:

Honors students or at least a 3.3 GPA only
Credits:
4.00

Description:
The most basic needs of humans have not changed - water, food, and shelter - but the means of meeting these needs has. In this course, we will examine how technology-driven societies operate by studying how cities are built and how they function. Topics will include water supply and distribution systems; transportation systems (including road and bridge design and construction); building design, construction, and operation (including skyscraper and sustainable building design), and waste removal systems (municipal and industrial wastewater removal and treatment, solid waste removal and treatment). This is not a course about little gadgets and widgets; this is a course about big engineering marvels; and it emphasizes applications of science - how things work - rather than scientific theory.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGR, Honors

• SCI-173 Mapping Our World The Power of Digital Maps

Prerequisites:
SCI L173 Must be taken concurrently Knowledge of Windows type Application

Credits:
3.00

Description:
Geographic Information Science (GIS) link information (number of fire hydrants on a block) to features on a map (e.g., a point representing street address) that has a designated geographic location (as designated by global coordinates). Unlike paper maps, GIS software allows the production of interactive maps that allows the user to layer data, to indicate spatial patterns, to analyze trends, and to combine different features of the mapped area in novel ways. For example, a business person may wish to use GIS to determine the optimum location of retail outlet (based on the mapped demographics of a neighborhood), while an environmental engineer may use GIS to describe the location of outfalls to see how they correlate to areas of stream pollution. In this course, students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGR
SCI-L173 Mapping Our World Lab

Prerequisites:

Must be taken concurrently with SCI-173

Credits:

1.00

Description:

This laboratory illustrates concepts and methods taught in SCI 173. In this lab students will be introduced to maps, map vocabulary and attributes, and GIS mapping through a series of mapping exercises. A knowledge of Windows-type applications is presumed.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS, SCI TECH ENGNR

SCI-181 Science and Life in the 21st Century

Credits:

4.00

Description:

This is a four credit, non-lab, science course that examines the central scientific problems confronting the 21st century. The course studies particular topics and teaches the necessary science around these topics to provide a good understanding of the issues. The topics currently are: Energy, Science and Economic Decisions, Sustainability of Life on Earth, Health and Science.

Term:

Offered Both Fall and Spring

Type:

NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR

SCI-184 Contemporary Science and Innovation

Credits:

4.00

Description:
This is a 4 credit, project based science course that examines the central scientific problems confronting the 21st century. The course consists of lectures, class discussions, field trips, and in-class hands-on activities designed to familiarize the student with different concepts of the lectures. The current focus is on sustainable energy production. A final team project related to the course topics will be given. This is the version of SCI 183 without a separate lab component. Students who have taken SCI 183, L183 are not allowed to take this course.

Term:
Offered Both Fall and Spring

Type:
NATURAL SCIENCE FOR BA BFA & BSJ,SCI TECH ENGNR,NATURAL SCIENCE FOR BS

- **SCI-201 Physics for Future Presidents**
  
  **Credits:**
  4.00

  **Description:**
  
  This course presents a topical introduction to the key principles and concepts of physics in the context of the world events and natural phenomena that confront world leaders and that require informed decisions and responses. Energy, health, counter-terrorism, remote sensing, space programs, nuclear proliferation, and a host of other modern challenges have technological and scientific dimensions, the understanding of which is essential to avoiding disastrous policy decisions. This course considers the application of physics to these societal challenges. The material is covered at a level and pace that a future world leader should be able to handle; the emphasis is on the development of physical reasoning skills, and not on detailed, mathematical problem solving.

  **Type:**
  SCI TECH ENGNR

- **SCI-210 Earth and Planetary Crystals**
  
  **Prerequisites:**
  Take SCI-L210 concurrently

  **Credits:**
  3.00

  **Description:**
  
  This course will provide undergraduate students of various disciplines with an introduction to gems and crystals using interactive, evidence-based teaching approaches. Crystalline forms of matter are critical to our existence. Using innovative teaching strategies of in-class hands-on demonstration, supplemented with visuals of crystal details, the course provides students insights into the formation, alteration and unique properties that make crystals invaluable. Topics range from the study of proteins and nucleic acids to the interior of planets. The in-class lectures will provide a basic guide that will serve as a platform for individually catered in-depth study.
Therefore, the course is open to advanced students as well, who can pick up higher level of information for discussion and class projects.

Type:

NATURAL SCIENCE FOR BS, NATURAL SCIENCE FOR BA BFA & BSJ, SCI TECH ENGNR

- **SCI-L210 Earth and Planetary Crystals Laboratory**

  Prerequisites:
  
  Take SCI-210 concurrently
  
  Credits:
  
  1.00

  Description:

  This course introduces concepts that are central to understanding crystals, gemstones and other natural materials abundant throughout the solar system. It includes an introduction to carbon-based crystals (diamonds, proteins, viruses and ices) in context with origins of life, geopolitical significance and their applications. This laboratory-based course is an introduction to modern tools and techniques for crystal analysis with a historical context of some of the greatest discoveries in science (DNA, and other nanomaterials). It presents crystals and gems from their visually appealing point of view to their sometimes-dramatic physical characteristics, with a broad view of their formation, occurrence, physics, chemistry and resources perspective.

  Type:

  SCI TECH ENGNR

- **SCI-251 Intro to Coastal Geology**

  Prerequisites:

  Intro Math

  Credits:

  4.00

  Description:

  Coastal environments will be analyzed with an emphasis on the important environmental characteristics of these areas. Management and environmental problems within the coastal and offshore areas such as beach erosion, beach access, and oil spills will be considered. One required field trip.

  Term:

  Offered Spring Term

  Type:
SCI-L251 Intro Coastal Geology I Lab

Prerequisites:
SCI 251 must be taken concurrently

Credits:
1.00

Description:
An introduction to laboratory and field techniques used in the geological study of coastal environments. Field trips will be taken to local coastal areas.

Term:
Offered Spring Term

Type:
NATURAL SCIENCE FOR BA BFA & BSJ, NATURAL SCIENCE FOR BS
2016-2017 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The program of study combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Crime & Justice Concentration
- General Sociology Concentration
- Health & Society Concentration
- Youth & Community Concentration
- Crime & Justice Minor Requirements
- General Sociology Minor Requirements
- Health & Society Minor Requirements
- Accelerated Bachelor's/Master's Degree in Crime & Justice Studies
- Honors
- Societies
- Sociology Courses

Major Requirements: 9 courses, 36 credits

The major in Sociology consists of 9 courses (36 credits). Students will select one of four concentrations:

- Crime & Justice
- General Sociology
- Health & Society
- Youth & Community

Due to the sequencing and prerequisites of some required courses, students should plan to take their introductory-level course during their first year at Suffolk.
Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
2016-2017 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The program of study combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Crime & Justice Concentration
- General Sociology Concentration
- Health & Society Concentration
- Youth & Community Concentration
- Crime & Justice Minor Requirements
- General Sociology Minor Requirements
- Health & Society Minor Requirements
- Accelerated Bachelor's/Master's Degree in Crime & Justice Studies
- Honors
- Societies
- Sociology Courses

The concentration in Crime & Justice gives students the knowledge and skills to enter, and be effective in, the various fields of adult and juvenile justice, youth development, community justice, criminal justice, victim advocacy, and human services.

Major Requirements with Crime & Justice Concentration: 9 courses, 36 credits

Core Requirements (4 courses, 16 credits)

- SOC-214 Research Methods in Sociology

  Prerequisites:

  SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315, or 333.

  Credits:
4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

• **SOC-333 Sociology of Crime**

  Prerequisites:
  
  SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

  Credits:
  
  4.00

  Description:
  
  The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

• **SOC-433 Senior Seminar**

  Prerequisites:
  
  SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

  Credits:
  
  4.00

  Description:
  
  This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

Choose one of the following:
• SOC-113 Introduction to Sociology
  Credits:
  4.00
  Description:
  An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.
  Term:
  Offered Both Fall and Spring
  Type:
  Social Science

• SOC-116 Social Justice
  Credits:
  4.00
  Description:
  An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.
  Term:
  Offered Both Fall and Spring
  Type:
  Social Science

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology major students must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or Sociology of Crime (SOC-333).

Concentration Requirements (3 courses, 12 credits)

• SOC-234 Crime and Justice in American Society
  Credits:
  4.00
An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.

Term:
Offered Both Fall and Spring

Choose two of the following Crime & Justice electives; at least one of these must be at the 300-level:

- **SOC-209 Youth in American Society**
  
  **Credits:**
  4.00
  
  **Description:**
  The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

- **SOC-210 Juvenile Justice and the Law**
  
  **Credits:**
  4.00
  
  **Description:**
  Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

- **SOC-211 Corrections and Punishment**
  
  **Prerequisites:**
  Take SOC-234 or SOC-333;
  
  **Credits:**
  4.00
A sociological exploration of coercive and incapacitative responses to crime. Attention is given to the origins and patterning of segregative controls, the correctional claims of prison systems, alternatives to incarceration and relationships between types of crime, and criminals and varieties of punitive response.

Term:

Occasional

• SOC-218 Crime and Law in Indian Country

Credits:

4.00

Description:

What happens if you commit a crime on an Indian reservation? Who will prosecute you and how will they punish you? This course will explore the roots of tribal legal systems and criminal law, both the Native and American influences. You will gain an understanding of tribal government, legal systems, criminal law, and the role of tradition in contemporary tribal law. The course will also examine the conflict between Native and Non-Native perspectives on several cases: sovereignty, rights to cultural practices, women, freedom of religion, and land.

Term:

Occasional

Type:

Cultural Diversity Opt A,Diverse Perspectives

• SOC-230 Bad Girls

Credits:

4.00

Description:

This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:

Occasional

Type:

Cultural Diversity Opt A
• SOC-232 Street Gangs

Credits:

4.00

Description:

This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:

Cultural Diversity Opt A

• SOC-236 Deviance and Social Control

Credits:

4.00

Description:

Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.

Term:

Offered Both Fall and Spring

Type:

Social Science

• SOC-238 Cops & Robbers: Crime on Film

Credits:

4.00

Description:

An examination of images of crime and justice portrayed in the American cinema. Special attention is paid to the social and historical forces that have shaped popular representations of good and evil during the modern era.

Term:

Occasional
• **SOC-239 Men and Violence**

Credits:

4.00

Description:

An exploration of the nature of masculinity and its connection to interpersonal and collective violence in American society. The course focuses on the emotional, spiritual, social and cultural roots of the crisis of boyhood and masculinity as a context for and consequence of violence.

Term:

Occasional

Type:

Cultural Diversity Opt A

• **SOC-275 Women and Crime**

Credits:

4.00

Description:

This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime women, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:

Occasional

Type:

Cultural Diversity Opt A

• **SOC-301 Sociology of Law**

Credits:

4.00

Description:
Law and legal systems are examined in contemporary society. Emphasis is placed on the manner in which legal structures and processes interact with other social arrangements and are transformed over time.

- **SOC-305 Crime and Mental Illness In Contemporary US**

  Credits:

  4.00

  Description:

  Incarcerated and criminalized Americans suffer from extraordinarily high rates of physical and mental illnesses ranging from Hepatitis C, tuberculosis and HIV/AIDS to bipolar disorder, PTSD, substance abuse, and schizophrenia. This course explores connections between illness and involvement with the correctional system from the perspective of the individual offender as well as in terms of broader American cultural and political patterns.

- **SOC-322 Tough Guise**

  Credits:

  4.00

  Description:

  Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt A

- **SOC-332 Restorative Justice**

  Credits:

  4.00

  Description:

  The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals. We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional
justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

Type:
Expanded Classroom Requirement

- **SOC-334 Sociology of Policing**
  
  Prerequisites:
  
  SOC 333 or SOC 234
  
  Credits:
  
  4.00
  
  Description:

  An investigation of the emergence, organization, and structure of police systems. The course focuses on the conditions surrounding the relationship between the police and policed in different historical, cultural, political, and economic contexts.

  Term:

  Occasional

- **SOC-336 Probation and Parole**
  
  Prerequisites:
  
  SOC-234 or SOC-333;
  
  Credits:
  
  4.00
  
  Description:

  Correctional theories are reviewed along with the historical development of probation and parole. Current research and analytical perspectives reflecting on administrative problems, innovative policies and the internal philosophical inconsistencies of these systems are examined.

- **SOC-338 White Collar Crime**
  
  Credits:
  
  4.00
  
  Description:
An examination of the relationship between crime, business activity, and technology with special attention to the crimes of the powerful and the changing relationship between economic development and criminal activity.

Term:
Occasional

• SOC-340 Licit/Lethal: America's Drug Problem

Credits:
4.00

Description:
Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

Term:
Offered Fall Term

• SOC-341 International Drug Control Policy

Credits:
4.00

Description:
Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

Term:
Offered Spring Term

Type:
Cultural Diversity Opt B

• SOC-342 Law, Health & Human Rights

Credits:
This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

SOC-347 Immigration Law and Policy

Prerequisites:
Prerequisite: SOC 113 or SOC 116 OR Instructor's consent

Credits:
4.00

Description:
This course examines U.S. Immigration legislation and policies, focusing on how and why various immigration laws and policies have been established and implemented throughout history. We will address the intersection between immigration policy and race, ethnicity, nationality and socioeconomic status, as well as explore the effects that immigration laws have had on various immigrant groups and society in general.

Term:
Occasional

Type:
Cultural Diversity Opt A

SOC-390 The Prison Experience, Literature and Film

Credits:
4.00

Description:
An examination of prison writings, films, and the actual experience of prison life from literary and sociological perspectives. Students will have an opportunity to examine their own perspectives of the prison as a symbol and shadow in American Society and compare these impressions with the actual experience of inmates, correctional officers and others who have lived in the prison nation.

Term:
Occasional

Sociology Electives (2 courses, 8 credits)
Students must choose two courses in Sociology from outside the Crime & Justice concentration.

- Sociology Courses

The concentration in General Sociology gives students broad sociological knowledge and skills that prepare them for graduate study or for a variety of careers.

Major Requirements with General Sociology Concentration: 9 courses, 36 credits

Core Requirements for General Sociology (4 courses, 16 Credits)

- SOC-214 Research Methods in Sociology

  Prerequisites:

  SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315, or 333.

  Credits:
Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

- **SOC-433 Senior Seminar**

  Prerequisites:

  SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

  Credits:

  4.00

  Description:

  This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

Choose one of the following:

- **SOC-113 Introduction to Sociology**

  Credits:

  4.00

  Description:

  An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

  Term:

  Offered Both Fall and Spring

  Type:

  Social Science

- **SOC-116 Social Justice**
Description:

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Term:

Offered Both Fall and Spring

Type:

Social Science

Choose one of the following:

- **SOC-315 Social Conflict and Social Change**

  Prerequisites:

  SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

  Credits:

  4.00

  Description:

  An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

  Term:

  Occasional

- **SOC-333 Sociology of Crime**

  Prerequisites:

  SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

  Credits:
Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

General Sociology Elective Requirement (5 courses, 20 credits)

In addition to the 16 credits in the required core, students in General Sociology are required to take five additional Sociology electives (20 credits); at least one of these must be at the 200-level, and at least two must be at the 300-level. Students are strongly encouraged, in consultation with their advisors, to select courses that provide a broad and balanced knowledge of the discipline of sociology.

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology majors and minors must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or a sociological theory course (SOC-315 or SOC-333).
2016-2017 Archived Catalog Information

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The program of study combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Concentration Requirements (3 courses, 12 credits)

- **SOC-253 Sociology of Health and Illness**

  Credits:
  4.00

  Description:
  This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

  Term:
  Occasional

- **SOC-254 Sl-U.S. Health Care Landscapes**

  Prerequisites:
  This course fulfills the ECR requirement.

  Credits:
  4.00

  Description:
In this course students meet community needs by engaging in service-learning outside the classroom. In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:
Occasional

Type:
Expanded Classroom Requirement, Service Learning

Choose one of the following Health & Society electives:

- **SOC-256 Sociology of Aging**
  
  Credits:
  4.00
  
  Description:
  Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

  Term:
  Occasional

- **SOC-276 Sex and Society**
  
  Credits:
  4.00
  
  Description:
  An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

  Term:
  Occasional

- **SOC-303 How Pocahontas Lives: the Health of Native American Women and Girls**
Native American women and girls experience many threats to their well-being: polluted environments, violence, and the continuation of colonial practices mean that their lives are at risk. Dominant political, economic, and cultural norms do little to protect them. Yet Native American women and girls can and do assert their right to well-being as they choose to define it, achieving health and self-determination. This class will examine the indigenous women and girls of the United States, to consider the continued impact of colonialism on women’s health and the role of self determination in creating opportunities for the improvement of Native American women's health.

- **SOC-305 Crime and Mental Illness In Contemporary US**

  **Credits:**
  4.00

  **Description:**
  Incarcerated and criminalized Americans suffer from extraordinarily high rates of physical and mental illnesses ranging from Hepatitis C, tuberculosis and HIV/AIDS to bipolar disorder, PTSD, substance abuse, and schizophrenia. This course explores connections between illness and involvement with the correctional system from the perspective of the individual offender as well as in terms of broader American cultural and political patterns.

- **SOC-306 Population and Society**

  **Credits:**
  4.00

  **Description:**
  An introduction to demography or the study of population and its size, structure, and the ways it changes over time. Demographers study love, death and adventures, or the different patterns of fertility, mortality, and migration across the globe. The social causes and consequences of high mortality and fertility in sub-Saharan Africa, rapid fertility decline in China, and low fertility and mortality in western Europe are examined. Demographic approaches to social problems like world famine, teen pregnancy, HIV/AIDS pandemic, and social security system budget deficits are also considered.

- **SOC-340 Licit/Lethal: America's Drug Problem**

  **Credits:**
  4.00

  **Description:**
  Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual
framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

Term:
Offered Fall Term

- **SOC-341 International Drug Control Policy**

  Credits:
  
  4.00

  Description:
  
  Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

  Term:
  
  Offered Spring Term

  Type:

  Cultural Diversity Opt B

- **SOC-342 Law, Health & Human Rights**

  Credits:
  
  4.00

  Description:
  
  This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

- **SOC-354 Death and Dying**

  Credits:
  
  4.00

  Description:
An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:
Occasional
Type:
Diverse Perspectives

- **SOC-355 Women and Health**

  Credits:
  4.00

  Description:
  An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

  Term:
  Occasional

- **SOC-357 Global Health and Healing**

  Credits:
  4.00

  Description:
  An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

  Term:
  Occasional
  Type:
  Cultural Diversity Opt B,Diverse Perspectives

Sociology Electives (2 courses, 8 credits)

Choose two additional Sociology electives from outside the Health & Society concentration.

Youth & Community Concentration

The Youth & Community Concentration is designed for students preparing to work with children, teens, and young adults in a variety of settings that do not require teacher certification. The Youth & Community concentration explores a range of complex societal issues related to youth in local and global educational and community contexts. The concentration provides a strong theoretical framework needed to understand contemporary educational and community issues affecting youth. Students will explore the transformative power of education, relationship building, and effective programming to positively impact youth development. The concentration is grounded on foundational sociological and educational courses supplemented by an array of experiential opportunities (service learning and internships). This concentration is designed to prepare students for various careers in education related fields, non-profit agencies, and religious, cultural, and community organizations that specialize in youth outreach and programming.

Majors Requirements with Youth & Community Concentration: 9 courses, 36 credits

Core Requirements (4 courses, 16 credits)
• SOC-214 Research Methods in Sociology

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315, or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

• SOC-433 Senior Seminar

Prerequisites:

SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

Credits:

4.00

Description:

This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.

Choose one of the following:

• SOC-113 Introduction to Sociology

Credits:

4.00

Description:

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.
SOC-116 Social Justice

Credits:
4.00

Description:
An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

SOC-315 Social Conflict and Social Change

Prerequisites:
SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:
4.00

Description:
An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.
• SOC-333 Sociology of Crime

Prerequisites:

SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

Credits:

4.00

Description:

The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

In addition to earning a minimum passing grade of “C” in an introductory (100-level) Sociology course, Sociology major students must take and pass one other Sociology course before taking Research Methods in Sociology (SOC-214) or a sociological theory course (SOC-315, SOC-333).

Concentration Requirements (3 courses, 12 credits)

• SOC-209 Youth in American Society

Credits:

4.00

Description:

The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

• EDUC-310 Culturally Responsive Education

Credits:

4.00

Description:

The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-
represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

Term:
Offered Fall Term

Type:
Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-414 Urban Schooling**

  Credits:
  4.00

  Description:
  This course is an in-depth investigation of policies effecting urban schools; topics include: demographic influence on education, influences of national and state regulations on urban schools, sociological factors unique to urban schools, and in-depth analysis of equity and achievement.

  Term:
  Occasional

  Type:
  Social Science

Concentration Electives (1 course, 4 credits)

Choose one of the following:

- **EDUC-202 Educational Psychology**

  Credits:
  4.00

  Description:
  Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

  Term:
  Offered Both Fall and Spring

  Type:
• EDUC-203 Service Learning: Pre-K Outreach and Tutoring

Credits:
4.00

Description:
Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement, Social Science

• EDUC-205 Service Learning: Community Tutoring Project

Prerequisites:
This class fulfills the Expanded Classroom Requirement

Credits:
4.00- 8.00

Description:
Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement, Social Science, Local Engagement Experience

• EDUC-215 Service Learning Jumpstart Community Literacies

Credits:
4.00

Description:
This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-315 Strategies for Emerging English Learners**

  Credits:
  4.00

  Description:

  This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

  Type:

  Diverse Perspectives, Social Science

- **EDUC-408 Youth Programming**

  Credits:
  4.00

  Description:

  This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

  Type:

  Social Science

- **EDUC-415 Practicum: Middle School Teaching**

  Prerequisites:

  Coordinator of Student Teaching or Program Director's Consent

  Credits:
  8.00

  Description:
A 12-week practicum experience as a student teacher in a middle school. See regulations regarding student teaching.

Term:
Offered Spring Term

Type:
Social Science

• EDUC-424 Global Issues and Trends in American Education

Credits:
4.00

Description:
Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:
Occasional

Type:
Social Science

• SOC-210 Juvenile Justice and the Law

Credits:
4.00

Description:
Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

• SOC-220 Childhood and Adolescence in Contemporary Society

Credits:
4.00

Description:
This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.

Term:
Occasional

- **SOC-223 Families in Contemporary Society**

  **Credits:**
  4.00

  **Description:**
  An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

  Term:
  Occasional

  Type:
  Social Science

- **SOC-230 Bad Girls**

  **Credits:**
  4.00

  **Description:**
  This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

  Term:
  Occasional

  Type:
  Cultural Diversity Opt A
• SOC-232 Street Gangs

Credits:
4.00

Description:
This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.

Type:
Cultural Diversity Opt A

• SOC-276 Sex and Society

Credits:
4.00

Description:
An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

Term:
Occasional

• SOC-308 Sociology of Education

Credits:
4.00

Description:
Education is key in a democracy in which students need to develop themselves into knowledgeable people, with a strong sense of self, able to think critically with a developed ability to question others and to feel and act as empowered, active citizens. This is a tall order given the varieties of pressures on schools these days. But it is extremely important for these skills to be developed. With the shift in the economy, schools are going to be the critical factor in enabling students to compete in a globalized workplace and world.

• SOC-332 Restorative Justice

Credits:
4.00
The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals. We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

Type:

Expanded Classroom Requirement

- **SOC-340 Licit/Lethal: America's Drug Problem**

  Credits:

  4.00

  Description:

  Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

  Term:

  Offered Fall Term

- **SOC-341 International Drug Control Policy**

  Credits:

  4.00

  Description:

  Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

  Term:

  Offered Spring Term
• SOC-343 Child Welfare Services
  Credits:
  4.00
  Description:
  A survey of the historical development and current composition of services for children, including income maintenance, daycare, foster and institutional care and the adoption process.
  Term:
  Occasional

• SOC-344 Community Organization
  Credits:
  4.00
  Description:
  A study of the different types and functions of communities. Through identifying community needs, resources, and structure, students learn effective ways to organize for change.

• SOC-406 The Immigrant Experience
  Prerequisites:
  SOC-113 or SOC-116 and 4 credits of a SOC course at the 200 level or above
  Credits:
  4.00
  Description:
  The United States of America: A land of immigrants; The Great Melting Pot. This country has indeed attracted immigrants from all over the world. However, not all have been welcomed or treated equally. This course will investigate the reasons various immigrant groups (past and present) have come to the United States. We will also examine their experiences and the impact race, ethnicity, gender, class and social structures have had on them. During Spring Break the class will visit Ellis Island and the Tenement Museum in New York and the Lowell National Historical Park in Lowell. The class will also visit various sites in Boston throughout the semester.
  Type:
  Cultural Diversity Opt A, Expanded Classroom Requirement, Local Engagement Experience
Experiential Requirement (1 course, 4 credits)

Choose one of the following:

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  Expanded Classroom Requirement, Social Science

- **EDUC-205 Service Learning: Community Tutoring Project**
  
  **Prerequisites:**
  
  This class fulfills the Expanded Classroom Requirement
  
  **Credits:**
  
  4.00-8.00
  
  **Description:**
  
  Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.
  
  **Term:**
  
  Offered Both Fall and Spring
  
  **Type:**
  
  Expanded Classroom Requirement, Social Science, Local Engagement Experience

- **EDUC-215 Service Learning Jumpstart Community Literacies**
  
  **Credits:**
  
  4.00
This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students' diverse needs in the acquisition of literacy.

- **EDUC-315 Strategies for Emerging English Learners**

  Credits:

  4.00

  Description:

  This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

  Type:

  Diverse Perspectives, Social Science

- **EDUC-408 Youth Programming**

  Credits:

  4.00

  Description:

  This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

  Type:

  Social Science

- **EDUC-415 Practicum: Middle School Teaching**

  Prerequisites:

  Coordinator of Student Teaching or Program Director's Consent

  Credits:

  8.00
A 12-week practicum experience as a student teacher in a middle school. See regulations regarding student teaching.

Term:
Offered Spring Term

Type:
Social Science

• **SOC-483 Internship in Sociology I**

Prerequisites:
Students must be Sociology majors with at least a 3.0 GPA; must have at least sophomore status at the time of application; must have one full day free each week to work an internship. Applications for the Internship in Sociology I course must be approved by the Instructor.

Credits:
4.00

Description:
Students are provided with the opportunity to apply academic learning in a supervised internship consistent with their personal career goals or academic interest. The course covers such topics as career exploration and development, resume and cover letter writing, job fairs, and networking, and graduate school applications. In addition to the course assignments, students are required to complete a minimum full day internship each per week during the entire semester.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

• **SOC-484 Internship in Sociology II**

Prerequisites:
SOC 483. Students must be Sociology majors with at least a 3.0 GPA; must have at least sophomore status at the time of application; must have one full day free each week to work an internship. Applications for the Internship in Sociology I course must be approved by the Instructor.

Credits:
4.00
Description:

Students are provided an opportunity to intensify or extend their internship experience. The course covers such topics as mock interviewing, informational interviewing, and job fairs.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

Sociology

The Sociology Department offers a challenging and stimulating curriculum that prepares students to engage as critical thinkers and active citizens within a diverse global society. The program of study combines a broad curriculum within sociology with an option to specialize in specific concentrations within the major. Minors in General Sociology, Crime & Justice, Health & Society, and Education Studies are also available.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Crime & Justice Concentration
- General Sociology Concentration
- Health & Society Concentration
- Youth & Community Concentration
- Crime & Justice Minor Requirements
- General Sociology Minor Requirements
- Health & Society Minor Requirements
- Accelerated Bachelor's/Master's Degree in Crime & Justice Studies
- Honors
- Societies
- Sociology Courses

Crime & Justice Minor

Core Requirements (3 courses, 12 credits)

- SOC-234 Crime and Justice in American Society

  Credits:

  4.00

  Description:

  An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.
Choose one of the following:

- **SOC-113 Introduction to Sociology**

  Credits:
  
  4.00
  
  Description:
  
  An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

- **SOC-116 Social Justice**

  Credits:
  
  4.00
  
  Description:
  
  An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

Students must earn a grade of "C" or better in either of these classes in order to enroll in a research methods or sociological theory class.

Choose one of the following:
- **SOC-214 Research Methods in Sociology**

  Prerequisites:

  SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

  Credits:

  4.00

  Description:

  How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

  Term:

  Offered Both Fall and Spring

- **SOC-333 Sociology of Crime**

  Prerequisites:

  SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

  Credits:

  4.00

  Description:

  The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

Elective Courses (2 courses, 8 credits)

Students may choose any two courses from the Crime & Justice electives list; at least one of which must be at the 300-level.
Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Health & Society Minor

Core Requirements (3 courses, 12 credits)

- **SOC-253 Sociology of Health and Illness**

  **Credits:**

  4.00

  **Description:**

  This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public
debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:
Occasional

- **SOC-254 Sl-U.S. Health Care Landscapes**

  **Prerequisites:**
  This course fulfills the ECR requirement.

  **Credits:**
  4.00

  **Description:**
  In this course students meet community needs by engaging in service-learning outside the classroom. In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

- Sociology Courses

Degree Requirements

1. Students admitted to this dual degree program must meet all the requirements of an undergraduate Sociology, Crime & Justice concentration program.

2. Student must also meet all requirements for the Master of Science in Crime & Justice Studies.

3. The two graduate courses taken during the senior year will count toward BOTH the undergraduate and graduate degree requirements. Credit hours will be awarded based on the graduate course description.

4. Before enrolling in any Master's level courses, students must meet with the MSCJS graduate program director to obtain approval for classes.

5. Students are subject to the usual standards for academic standing, i.e., undergraduate standards for undergraduate courses and graduate standards for graduate courses.

Upon successful completion of all of the degree requirements, a student will receive a dual Bachelor’s and Master’s degree. The exact degree will be awarded based on the specific undergraduate program the student completes. A student may permanently exit the dual degree program and opt to graduate with a Bachelor’s degree if all the
requirements for a Bachelor's degree have been met. In this case, the graduate courses taken in the senior year will be counted as 4-credit courses applied toward the undergraduate degree requirements.

Alpha Kappa Delta

Alpha Kappa Delta is the National Honor Society for Sociology majors who have demonstrated excellence in sociology. Its purpose is to promote in each of the various chapters an interest in sociology, research in social problems, and activities leading to human welfare. The Suffolk Chapter has been designated Iota of Massachusetts. To be eligible for membership, candidates must be of junior or senior status, have a 3.3 average overall, and a 3.0 average in Sociology courses taken at the host institution. Students must have taken at least four courses in Sociology at Suffolk.

Alpha Phi Sigma

An affiliate organization of the Academy of Criminal Justice Sciences, Alpha Phi Sigma is the National Honor Society for students majoring in fields related to criminal justice sciences. To qualify for membership students must have

1. a cumulative grade point average of 3.2,
2. a 3.2 average in criminal justice courses,
3. completed at least three full-time semesters or the equivalent, and
4. successfully complete at least four courses in the crime and justice field at Suffolk.

The Suffolk University Chapter of Alpha Phi Sigma is Gamma Psi.

  **Credits:**

  4.00

  **Description:**

  Core required course for Master of Science in Crime and Justice Program. This course will examine the relationship among crime, criminal justice and the community as well as the impact of crime on local neighborhoods and community institutions. The role of the community in the criminal justice system and processes of social control are also examined. Topics covered include: local measurement of crime statistics; community policing; prevention and early intervention strategies; community corrections and intermediate
sanctions. Strategies for empowering local communities to address the quality of life in the urban environment are also explored.

Term:
Offered Spring Term

- **EDUC-110 Introduction to Education**

  **Credits:**
  4.00

  **Description:**
  Working with children and adolescents is a facet of many professions. This course will introduce students to the study of education occurring in formal and informal settings. This course focuses on the relationships among, and between, teachers, discourse, and community. Students will glean insight into the relationship of school and society as well as power and control in American Education. Required of all education minors. Five hours of field work required.

  Term:
  Offered Both Fall and Spring

  Type:
  Social Science

- **EDUC-202 Educational Psychology**

  **Credits:**
  4.00

  **Description:**
  Examines the nature and development of human abilities and the teaching-learning process. Considers the facts and generalizations of child and adolescent growth and development, working with diverse cultures, and special needs children in school settings. Ten hours of field work.

  Term:
  Offered Both Fall and Spring

  Type:
  Social Science

- **EDUC-203 Service Learning: Pre-K Outreach and Tutoring**

  **Credits:**
4.00

Description:

Students complete a minimum of 35 hours of tutoring in an educational setting, or community organization, in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science

• EDUC-205 Service Learning: Community Tutoring Project

Prerequisites:

This class fulfills the Expanded Classroom Requirement

Credits:

4.00-8.00

Description:

Students complete 35 hours per semester of educational tutoring in a local school (K-5), in conjunction with a weekly seminar on campus. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement, Social Science, Local Engagement Experience

• EDUC-208 Service Learning: College Access

Credits:

4.00

Description:

Students complete a minimum of 35 hours of tutoring and coaching in an educational setting, or a community organization in conjunction with a weekly seminar on campus. Programs include COACH, Connections to College, and others. Open to all majors. No previous experience required.

Term:

Offered Both Fall and Spring
• EDUC-209 Reading and Writing in the Classroom

Credits:
4.00

Description:
Students will become knowledgeable about the various approaches to teaching reading and writing in the content areas. This course is designed for teaching the necessary literacy skills in both Middle School and High School. Topics include: formal and informal assessment techniques, differentiation of instruction, diagnosing problems and integrating reading and writing into curriculum and instruction.

Type:
Social Science

• EDUC-210 Service Learning: Alternative Spring Break

Prerequisites:
Open to all majors, Instructor's signature required

Credits:
4.00

Description:
Students complete all research, travel, and reporting requirements in conjunction with Suffolk University's Alternative Spring Break. Open to all majors. No previous experience required.

Term:
Offered Spring Term

Type:
Social Science

• EDUC-214 Introduction to Teaching

Credits:
4.00

Description:
This course introduces students to the basic competencies of school teaching. Topics include: lesson planning, classroom management, grouping for instruction, effective pedagogical practices, assessment methods, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks/common core state standards. Field observations (25 hours) required.

- **EDUC-215 Service Learning Jumpstart Community Literacies**

  Credits:

  4.00

  Description:

  This course is designed for Jumpstart Corps members to develop competencies in teaching strategies for reading and writing. The course introduces theoretical and instructional issues in the development of literacy skills. Students will be engaged in reflective, critical consideration of students’ diverse needs in the acquisition of literacy.

- **EDUC-310 Culturally Responsive Education**

  Credits:

  4.00

  Description:

  The relationship between cultural diversity and schooling is explored by examining impediments to academic achievement and advancement by minority students, non-native English speaking students, and other under-represented groups. Topics include: standardized testing, identification of inequities, legal and ethical responsibilities of teachers, and promoting equity. Ten pre-practicum observation hours required for teacher candidates.

  Term:

  Offered Fall Term

  Type:

  Cultural Diversity Opt A, Social Science, Diverse Perspectives

- **EDUC-312 Curriculum and Pedagogy: Middle and Secondary School**

  Prerequisites:

  This course fulfills the Expanded Classroom Requirement

  Credits:

  4.00

  Description:
Introduces students to the basic competencies of Middle and Secondary school teaching. Topics include: behavioral problems, classroom management, grouping for instruction, motivation and reward systems, individualized instruction, IEP’s, requirements for licensure in Massachusetts, and discipline specific curriculum development using the curriculum frameworks developed by the Massachusetts Department of Education. Field observations and experiences are grounded in theoretical discussion as students begin to develop their personal philosophies of education. Field observations (40 hours) required. Required prior to student teaching.

Term:
Offered Fall Term

Type:
Expanded Classroom Requirement, Social Science

- **EDUC-313 Classroom Communication**

  Credits:
  4.00

  Description:

  Examines communication between and among teachers and students in the classroom setting. Topics include: communication apprehension, building oral fluency, use of media technology to enhance student learning, cooperative learning, and related professional and legal responsibilities of teachers. Ten pre-practicum observation hours required for Teacher Candidates.

  Term:
  Offered Spring Term

  Type:
  Social Science

- **EDUC-315 Strategies for Emerging English Learners**

  Credits:
  4.00

  Description:

  This course examines the specific needs and challenges of the various language and cultural groups in schools. Topics include: theories of 1st and 2nd language acquisition, strategies for teaching academic content, modifying instruction in the mainstream classroom, creating classroom cultures that invite all students into learning, the role of advocacy and professional collaboration in ESL, and analysis of policies related to assessment and placement of English Language Learners.

  Type:
  Diverse Perspectives, Social Science
EDUC-402 History & Philosophy of American Education

Credits:

4.00

Description:

Explores the evolution of schooling in the United States from The English High School to present. Theorists include: Mann, Franklin, Dewey, Sizer, and others.

Term:

Offered Spring Term

Type:

Social Science

EDUC-408 Youth Programming

Credits:

4.00

Description:

This course focuses on the exploration and understanding of issues, strategies and frameworks related to developing and implementing youth programs. Students will be exposed to developmental theories, and various components of effective youth programmatic planning. Topics include: conducting needs assessments, developing goals and objectives, logistics planning, recruitment and training, and program evaluation.

Type:

Social Science

EDUC-414 Urban Schooling

Credits:

4.00

Description:

This course is an in-depth investigation of policies effecting urban schools; topics include: demographic influence on education, influences of national and state regulations on urban schools, sociological factors unique to urban schools, and in-depth analysis of equity and achievement.

Term:

Occasional
• **EDUC-415 Practicum: Middle School Teaching**

  **Prerequisites:**
  Coordinator of Student Teaching or Program Director's Consent

4.00

Description:
Examines major current issues of educational policy against the background of demographic trends, technological innovations, standardized testing, and curricular shifts.

Term:
Occasional

Type:
Social Science

- EDUC-510 Independent Study

Prerequisites:
An independent study form must be submitted to the CAS Dean's Office.

Credits:
1.00- 4.00

Description:
Members of the Department will meet with students to direct their research in areas of special interest to them. Projects of this sort will be authorized only in unusual circumstances upon the recommendations of the Department Chairperson and with the approval of the Dean. Offered by arrangement only.

**SOC-113 Introduction to Sociology**

**Credits:**

4.00

**Description:**

An introduction to the sociological understanding of human interaction, group process and social structures. Students are introduced to basic concepts, theories and methods of sociological investigation. Majors and minors must pass with a grade of C or better.

**Term:**

Offered Both Fall and Spring

**SOC-116 Social Justice**

**Credits:**

4.00

**Description:**

An examination of traditional and contemporary problems associated with major social institutions such as the family, economics, government and education. Social forces related to ethnicity, social class, health and welfare, and urbanization are also included. Alternative remedial measures based on behavioral science theories are discussed. Majors and minors must pass with a grade of C or better.

**Term:**

Offered Both Fall and Spring

**SOC-209 Youth in American Society**

**Credits:**
The goal of the course is to provide a broad overview of children and youth and their place in American society. Particular attention is paid to (1) the impact of geographical location, social class, gender, race, sexuality, popular culture, mass media, and technology; (2) the intersection of youth cultures and mainstream society; and (3) the contention that some youth cultures are deviant.

**SOC-210 Juvenile Justice and the Law**

Credits: 4.00

Description:

Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

**SOC-211 Corrections and Punishment**

Prerequisites:

Take SOC-234 or SOC-333;

Credits: 4.00

Description:

A sociological exploration of coercive and incapacitative responses to crime. Attention is given to the origins and patterning of segregative controls, the correctional claims of prison systems, alternatives to incarceration and relationships between types of crime, and criminals and varieties of punitive response.

Term:

Occasional

**SOC-212 Statistics for Sociology**

Prerequisites:

SOC-113 OR SOC-116 and MATH-128 or higher

Credits: 4.00
In this course, students will be introduced to descriptive and basic inferential statistical techniques. The course will provide information on the following topics: Description - measures of central tendency (mean, median, mode) and measures of dispersion (range, standard deviation); logic of statistical inference, including normal curve and sampling distribution; hypothesis testing with one sample and two samples; measures of association between two variables (bivariate analysis), including chi-square, regression, and correlation; and introduction to multivariate regression. Students will utilize SPSS (Statistical Package for the Social Sciences) software to input and analyze data. The goals of the course are for students to appreciate the need for statistical methods in the broad field of sociology and to gain basic statistical literacy.

Term:

Offered Both Fall and Spring

Type:

Quantitative Reasoning

• SOC-214 Research Methods in Sociology

Prerequisites:

SOC 113 or 116 with C or better & one other SOC course. Cannot be taken concurrently with SOC 310,315,or 333.

Credits:

4.00

Description:

How sociologists decide what to study, how they select a research design, sample and collect data, analyze results, interpret findings, and write up reports. Students are introduced to the techniques most frequently used by sociologists and undertake their own small research project. Required for all Sociology majors.

Term:

Offered Both Fall and Spring

• SOC-217 Sociology of Urban Life

Prerequisites:

Fulfills ECR requirement

Credits:

4.00

Description:
An examination of the effects of the city on human life in its broadest as well as its most specific aspects. Greater Boston and similar communities across the nation will be studied as ecological settings, as producers and shapers of change, and as special contexts for understanding sociological ideas. Comparisons will be made among urban places in the U.S. and in other countries.

Term:
Occasional

Type:
Social Science, Cultural Diversity Opt A, Expanded Classroom Requirement

- SOC-218 Crime and Law in Indian Country
  Credits:
  4.00
  Description:
  What happens if you commit a crime on an Indian reservation? Who will prosecute you and how will they punish you? This course will explore the roots of tribal legal systems and criminal law, both the Native and American influences. You will gain an understanding of tribal government, legal systems, criminal law, and the role of tradition in contemporary tribal law. The course will also examine the conflict between Native and Non-Native perspectives on several cases: sovereignty, rights to cultural practices, women, freedom of religion, and land.
  Term:
  Occasional
  Type:
  Cultural Diversity Opt A, Diverse Perspectives

- SOC-220 Childhood and Adolescence in Contemporary Society
  Credits:
  4.00
  Description:
  This course examines the development of children and adolescents from biological, psychological, and sociological perspectives. Major themes and changes associated with each developmental stage are discussed. The course explores practical implications of theory and research (parenting, juvenile justice, etc.), and current topics in child and adolescent development. Class format includes lectures discussion, debates and direct observation of children.
  Term:
  Occasional
• SOC-221 Environment and Society

Credits:

4.00

Description:

The history of the American Environmental Movement and eco-feminism will be examined as well as issues of pollution and depletion. Sustainable technologies and other current progressive programs will be addressed.

• SOC-222 Women in Struggle on Film

Credits:

4.00

Description:

Women's struggles in arenas from war to labor disputes will be examined through films and writings. Societal, historical and cultural contexts of women's roles in films are discussed drawing on film criticism and sociological analyses.

Term:

Occasional

• SOC-223 Families in Contemporary Society

Credits:

4.00

Description:

An exploration of the diversity of contemporary families. Comparisons are made between the cultural myths of the ideal family and the lived realities. Challenges confronting contemporary families and their implications for social policy are examined in such areas as work/family conflicts, gay and lesbian families, welfare, family violence.

Term:

Occasional

Type:

Social Science

• SOC-224 Families in Contemporary Society (Spain)

Credits:

4.00
Spain has experienced major socio-demographic changes since the mid 1970s. These transformations mainly arise from the new role of women in society and, in particular, women's higher levels of education, work experience, and labor market attachment. The changes in women's labor force participation have occurred in conjunction with a progressive postponement of main family events, such as leaving the parental home, forming a partnership and having children, as well as with a reduction in the family size. Spain is, indeed, characterized as having one of the lowest low fertility levels within Western industrialized countries, a pattern that is exacerbating the ongoing process of population aging. This picture partly reflects the conflicting relationship that currently exists between women's labor force participation and the accommodation of family responsibilities: the so-called work/family balance. Ongoing differences among countries have been accounted for by different explanatory factors that involve socio-economic, cultural and social policy dimensions. From a comparative perspective, the course is intended to cover recent debates, controversies, and research on family formation and family dilemmas in contemporary Spain.

Type:

Social Science

• SOC-225 Sociology of Romance

Credits:

4.00

Description:

The meaning of romance and courtship today and its social consequences in marriage, homogamy, stratification and divorce. The historical origins of romanticism and the sources of romance in socialization, books and magazines, television and movies, popular music and peer group membership are also considered.

Term:

Occasional

• SOC-226 Religion in Contemporary Society

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

An examination of the fundamental purpose and functions of religion in society. Major religious systems in America are analyzed in terms of basic values and structure. The impact of changes in religious organizations upon clergy, laity and society are discussed. This class fulfills the ECR requirement.

Term:
• **SOC-227 Race in American Society**

  Credits:

  4.00

  Description:

  Despite the election of Barack Obama as President of the United States, race remains one of the most divisive forces in U.S. society. While many of us struggle against racism, racial classification continues to affect where we live, where we work, and how we see ourselves. Racial classification affects our access to health care and our encounters with police officers. Distorted images of racial groups fill television and movie screens. Appeals to racism and fear of foreigners are dominant themes in elections to state and national offices. This course examines the formation and re-formation of racial classifications: how particular groups become racially identified, how these classifications change over time, and how conflicts over race have shaped American society. The meanings of race, as seen from a variety of perspectives, will be a consistent theme throughout the course.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt A,Diverse Perspectives,Cultural Diversity Opt B

• **SOC-228 Cultural, Global and Social Perspectives**

  Credits:

  4.00

  Description:

  Enables students to examine, as well as develop an awareness and appreciation of, diversity within today’s society. Providing an overview of the major racial, ethnic, and cultural groups in the U.S., the focus is on the ways in which cultural awareness enhances professional helping relationships and improves the operation of human services systems.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt A,Diverse Perspectives
• SOC-229 Social Class and Inequality

Credits:
4.00

Description:
This course examines the difference between the life experience of those who are rich, poor and middle class. Topics include: the elite in Boston, theories of inequality; blue collar neighborhoods, the hard living poor, and ethnic and sexual stratification.

Term:
Occasional

• SOC-230 Bad Girls

Credits:
4.00

Description:
This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:
Occasional

Type:
Cultural Diversity Opt A

• SOC-232 Street Gangs

Credits:
4.00

Description:
This course provides an overview of youth gangs and their sociological underpinnings, which are rooted in poverty and racism. Topical areas are discussed in relation to these key factors. Study topics include the history of gangs, theories about gang formation and individual membership, gangs and criminal behavior, socio-cultural importance of gangs, and strategies to control gang behavior. The course will utilize current gang issues in the US generally and in Massachusetts in particular as a basis to better understand the nuances of youth gangs.
• SOC-234 Crime and Justice in American Society
  Credits:
  4.00
  Description:
  An overview of issues and social variables involved in the pre-arrest and arrest stages followed by a more in-depth analysis of pre-trial, trial, sentencing, and correctional phases. Sociological and criminal justice models are examined and compared with the actual processes and purported functions of criminal justice agencies. Required for all majors in the Crime and Justice Concentration.
  Term:
  Offered Both Fall and Spring

• SOC-236 Deviance and Social Control
  Credits:
  4.00
  Description:
  Who and what is deviant? How shall the society respond? The course examines a range of deviance theories and associated social policies. A number of case studies will be used to evaluate these theories, such as body piercing, witchcraft, gay and lesbian sexuality, corporate crime, disability, prostitution, violence against women, racism, anti-Semitism, and gangs.
  Term:
  Offered Both Fall and Spring
  Type:
  Social Science

• SOC-237 School to Prison Pipeline
  Credits:
  4.00
  Description:
  This course will examine the mechanisms through which U.S. social institutions, particularly schools, facilitate youth involvement in the juvenile and criminal justice systems. These mechanisms include: inequity, disability
tracking, zero-tolerance policies, push-out, and the criminalization of adolescent behavior. Students will engage in activities aimed at analyzing these processes and developing methods to disrupt them at the social, political, educational, and instructional levels.

- **SOC-238 Cops & Robbers: Crime on Film**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  An examination of images of crime and justice portrayed in the American cinema. Special attention is paid to the social and historical forces that have shaped popular representations of good and evil during the modern era.
  
  **Term:**
  
  Occasional

- **SOC-239 Men and Violence**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  An exploration of the nature of masculinity and its connection to interpersonal and collective violence in American society. The course focuses on the emotional, spiritual, social and cultural roots of the crisis of boyhood and masculinity as a context for and consequence of violence.
  
  **Term:**
  
  Occasional
  
  **Type:**
  
  Cultural Diversity Opt A

- **SOC-242 Law, Health & Human Rights**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.
  
  **Term:**
• SOC-253 Sociology of Health and Illness

Credits:

4.00

Description:

This course provides students with an introduction to how social norms, structures, and practices shape experiences of illness and health. Among the topics that will be covered are: health and the environment, the reasons some groups of people are less healthy than others, living with chronic illness and disabilities, and public debates surrounding issues such as performance enhancing drugs and sports, Attention Deficit Disorder and the HPV vaccine. Required for all students in the health, Medicine and the Body Concentration.

Term:

Occasional

• SOC-254 Sl-U.S. Health Care Landscapes

Prerequisites:

This course fulfills the ECR requirement.

Credits:

4.00

Description:

In this course students meet community needs by engaging in service-learning outside the classroom. In this course, students will learn about how the U.S. health care system works. We will study the politics and economics of the health care system and discuss the key health care policy issues of this decade. Using the theoretical perspectives provided by sociology, we will look at issues of power, hierarchy, race, and gender vis-a-vis the health care system. Reading for this course centers on first person narratives by people working in the health care system. This course fulfills the ECR requirement.

Term:

Occasional

Type:

Expanded Classroom Requirement, Service Learning

• SOC-256 Sociology of Aging

Credits:

4.00
Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:
Occasional

- **SOC-264 Social Media and Society**

  Credits:
  4.00

  Description:
  An examination of the ways in which social structures and processes influence and are affected by modern ideas, needs and social practice techniques in technologically advanced societies is considered in conjunction with changes in the way in which we understand the world, the nature of work and leisure, the processing of information and the character of social institutions. Normally offered alternate years. Fulfills the Social Science Option. Fulfills the Sociology Department's Social Policy requirement.

  Type:
  Social Science

- **SOC-273 Women in Contemporary Society**

  Credits:
  4.00

  Description:
  A critical analysis of theory and research related to the socialization, roles and social participation of women in contemporary society.

  Term:
  Occasional

- **SOC-275 Women and Crime**

  Credits:
  4.00

  Description:
This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

Term:
Occasional

Type:
Cultural Diversity Opt A

- **SOC-276 Sex and Society**
  
  Credits:
  
  4.00

  Description:

  An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

  Term:

  Occasional

- **SOC-286 Women and Work**

  Credits:

  4.00

  Description:

  An exploration of the relationship between gender roles, work environments, and careers in American society. The problems and prospects faced by women in the world of work are considered with special attention to power and sexism in the workplace, domestic vs. organizational work, role conflicts for working women, and the relationship between changing images of women and changing patterns of female employment. Policy requirement.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt A

- **SOC-301 Sociology of Law**
Law and legal systems are examined in contemporary society. Emphasis is placed on the manner in which legal structures and processes interact with other social arrangements and are transformed over time.

- **SOC-303 How Pocahontas Lives: the Health of Native American Women and Girls**

  Credits:
  
  4.00

  Description:

  Native American women and girls experience many threats to their well-being: polluted environments, violence, and the continuation of colonial practices mean that their lives are at risk. Dominant political, economic, and cultural norms do little to protect them. Yet Native American women and girls can and do assert their right to well-being as they choose to define it, achieving health and self-determination. This class will examine the indigenous women and girls of the United States, to consider the continued impact of colonialism on women's health and the role of self determination in creating opportunities for the improvement of Native American women's health.

- **SOC-305 Crime and Mental Illness In Contemporary US**

  Credits:
  
  4.00

  Description:

  Incarcerated and criminalized Americans suffer from extraordinarily high rates of physical and mental illnesses ranging from Hepatitis C, tuberculosis and HIV/AIDS to bipolar disorder, PTSD, substance abuse, and schizophrenia. This course explores connections between illness and involvement with the correctional system from the perspective of the individual offender as well as in terms of broader American cultural and political patterns.

- **SOC-306 Population and Society**

  Credits:
  
  4.00

  Description:

  An introduction to demography or the study of population and its size, structure, and the ways it changes over time. Demographers study love, death and adventures, or the different patterns of fertility, mortality, and migration across the globe. The social causes and consequences of high mortality and fertility in sub-Saharan Africa, rapid fertility decline in China, and low fertility and mortality in western Europe are examined. Demographic approaches
to social problems like world famine, teen pregnancy, HIV/AIDS pandemic, and social security system budget deficits are also considered.

• SOC-308 Sociology of Education

Credits:
4.00

Description:
Education is key in a democracy in which students need to develop themselves into knowledgeable people, with a strong sense of self, able to think critically with a developed ability to question others and to feel and act as empowered, active citizens. This is a tall order given the varieties of pressures on schools these days. But it is extremely important for these skills to be developed. With the shift in the economy, schools are going to be the critical factor in enabling students to compete in a globalized workplace and world.

• SOC-312 Sex Offenders

Credits:
4.00

Description:
This course presents an overview of the policy issues related to sex offenders. Focusing on the current scholastic research on sex offenders, students will discuss myths about sexual offenders as well as the consequences of myths on policy. The course will additionally cover the history of sex offender policies and moral panics, explanations, treatment and prevention of sex offending and victimization.

• SOC-315 Social Conflict and Social Change

Prerequisites:
SOC 113 or 116 with a grade of C or better and one other SOC course; CANNOT be taken concurrently with SOC 214;

Credits:
4.00

Description:
An examination and comparison of the origin, development and structure of the major theoretical approaches in contemporary sociology. Contributions of different branches of sociology to theory are explored with special attention to the relevance of sociological explanations for society and the social process. Students must have taken SOC 113 or SOC 116 and passed with a C or better and one other course from the sociology department. Normally offered every semester.

Term:
Occasional
• **SOC-321 Identity, Self and Society**

  Credits:
  4.00

  Description:
  This course explores the emergence of the self as an intersection of biography, history and social structure. Emphasis is on modern, Western societies. Conceptually, we will take a life course approach which emphasizes processes of psychosocial, moral, intellectual, and spiritual development for contemporary men and women. This course is designed in part as a workshop where students will develop the skills and insights essential for conducting life history research and biographical studies that are sociological in focus.

  Term:
  Occasional

• **SOC-322 Tough Guise**

  Credits:
  4.00

  Description:
  Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

  Term:
  Occasional

  Type:
  Cultural Diversity Opt A

• **SOC-325 Popular Culture in America**

  Prerequisites:
  Prerequisite: SOC 113 or SOC 116.

  Credits:
  4.00

  Description:
An investigation of the images of life provided by mass communications, the educational system and official culture. Topics include: the growth of the youth culture since the 1950s; images of working people; women, minorities and advertising; changing ideas of success; consciousness-raising and contra-cultures.

Term:
Occasional

- **SOC-327 Special Topics: General Sociology**
  
  Credits:
  
  4.00

  Description:
  
  A course with special interest topics in sociology which changes depending on the professor.

  Term:
  
  Occasional

- **SOC-329 Sociology of Globalization**
  
  Prerequisites:
  
  Prerequisite: SOC 113 or SOC 116.

  Credits:
  
  4.00

  Description:
  
  Globalization is shrinking the world. How and why did this happen? This course will explore global change and the global processes which effect key social institutions: culture, the economy and politics. Students will study the processes of globalization and its impact on our lives and people around the globe.

  Term:
  
  Occasional

  Type:

  Cultural Diversity Opt B, Diverse Perspectives

- **SOC-330 Race and Human Rights**
  
  Prerequisites:
  
  Prerequisite: SOC 113 or SOC 116
Description:
What are the roles of race and ethnicity from a global perspective? A global racial hierarchy determines who experiences privilege or oppression. Students will examine how the meanings of race and ethnicity can vary by location and how they matter globally.

Term:
Occasional

Type:
Cultural Diversity Opt B

- **SOC-331 Violence Against Women**

  Credits:
  4.00

  Description:
  This course focuses on the many forms of violence against women, with particular attention to child sexual abuse, rape, and violence and abuse in intimate relationships. These crimes have been the subject of intense political organizing, cultural controversy, and criminal-legal reform over the past 40 years. Together these issues account for a significant portion of the work of the police and the courts. They are also major issues in women's health over the life span. This course will address these issues from psychological, sociological, political, and criminal-legal perspectives.

- **SOC-332 Restorative Justice**

  Credits:
  4.00

  Description:
  The purpose of this course is to introduce students to the principles of restorative justice and to examine the programs, practices and policies within schools, juvenile justice and the adult criminal justice system which implement a restorative practices. Restorative justice is a different philosophy of responding to harm which provides new roles for the victim, offender, community and professionals. We will compare a restorative approach to crime with the traditional system of discipline and crime control and critique the shortcomings of an adversarial or retributive response to criminal behavior. We will explore the theoretical and historical origins of traditional justice systems and restorative approaches. We will also examine how these ideas are being applied in practical partnerships between the justice system and the community here in the United States and around the world.

  Type:
  Expanded Classroom Requirement
• **SOC-333 Sociology of Crime**

  Prerequisites:

  SOC-113 or SOC-116 with a minimum grade of C and 1 additional SOC course. Cannot be taken concurrently with SOC-214

  Credits:

  4.00

  Description:

  The question Why is there crime? lies at the heart of this course. This class will address what we mean by crime, who gets to define what crime is, how crime can be explained and how it can be reduced. Making sense of crime is essential if we are to respond effectively to victims and offenders. This course offers an in-depth examination of the many different theories of crime. These include biological, psychological, and sociological theories of victimization and offending. The course will study these theories in the context of many different kinds of criminal offending. By the end of the course, students will have a deep understanding of where these theories came from; what their strengths and weaknesses are; whether they are supported by research findings; and what implications these theories have for stopping crime.

• **SOC-334 Sociology of Policing**

  Prerequisites:

  SOC 333 or SOC 234

  Credits:

  4.00

  Description:

  An investigation of the emergence, organization, and structure of police systems. The course focuses on the conditions surrounding the relationship between the police and policed in different historical, cultural, political, and economic contexts.

  Term:

  Occasional

• **SOC-336 Probation and Parole**

  Prerequisites:

  SOC-234 or SOC-333;

  Credits:

  4.00
Correctional theories are reviewed along with the historical development of probation and parole. Current research and analytical perspectives reflecting on administrative problems, innovative policies and the internal philosophical inconsistencies of these systems are examined.

- **SOC-337 Juvenile Justice and the Law**
  
  **Credits:**
  
  4.00

  **Description:**
  
  Considers the problems surrounding the legal definition and handling of juveniles who confront the law as offenders, clients and victims. Attention is devoted to the study of the special legal categories and procedures established for juveniles, the problems facing professionals providing juvenile services and the most significant directions of legal and social change affecting youth in our society. Normally offered every year. Fulfills the Sociology Department's Social Policy requirement.

- **SOC-338 White Collar Crime**
  
  **Credits:**
  
  4.00

  **Description:**
  
  An examination of the relationship between crime, business activity, and technology with special attention to the crimes of the powerful and the changing relationship between economic development and criminal activity.

  **Term:**
  
  Occasional

- **SOC-340 Licit/Lethal: America's Drug Problem**
  
  **Credits:**
  
  4.00

  **Description:**
  
  Most Americans think of prohibited substances such as marijuana, cocaine or heroin when they hear the word drug. This course will provide an in-depth examination of legal drug use in American society. A broad conceptual framework will be presented that illustrates how history, politics, society and economics all have played a key role in defining certain substances as permissible in America. Fulfills the Sociology Department Social Policy and Globalization requirements.

  **Term:**
  
  Offered Fall Term
• **SOC-341 International Drug Control Policy**

  Credits:

  4.00

  Description:

  Relying on a simplistic demand or supply explanation of why Americans use/abuse drugs obscures the reality of America's drug problem, is ineffective as a guide to public policy and has unforeseen, often negative consequences. Drug use is a complex and multi-faceted issue. There are no easy answers. To comprehend the complexity of America's drug problem one needs an understanding of the geography, history, religion, law, economics and international politics of the Middle and Far East, Eastern Europe, Africa, Mexico, and Central and South America. This class will provide this basic understanding without losing sight that the problem we seek to remedy is our own.

  Term:

  Offered Spring Term

  Type:

  Cultural Diversity Opt B

• **SOC-342 Law, Health & Human Rights**

  Credits:

  4.00

  Description:

  This course will look at the special opportunities and obligations of those in the health and legal professions to protect human rights. There will be an overview of human rights doctrine and key documents. Students will learn to apply human rights principles to particular occupations in the health and legal professions.

• **SOC-343 Child Welfare Services**

  Credits:

  4.00

  Description:

  A survey of the historical development and current composition of services for children, including income maintenance, daycare, foster and institutional care and the adoption process.

  Term:

  Occasional
• SOC-344 Community Organization

Credits:

4.00

Description:

A study of the different types and functions of communities. Through identifying community needs, resources, and structure, students learn effective ways to organize for change.

• SOC-347 Immigration Law and Policy

Prerequisites:

Prerequisite: SOC 113 or SOC 116 OR Instructor's consent

Credits:

4.00

Description:

This course examines U.S. Immigration legislation and policies, focusing on how and why various immigration laws and policies have been established and implemented throughout history. We will address the intersection between immigration policy and race, ethnicity, nationality and socioeconomic status, as well as explore the effects that immigration laws have had on various immigrant groups and society in general.

Term:

Occasional

Type:

Cultural Diversity Opt A

• SOC-354 Death and Dying

Credits:

4.00

Description:

An examination of changing definitions of life and death, social factors affecting causes and rates of death, care of the dying and their families, institutionalization, the funeral industry, suicide, crisis intervention, and the impact of technology on the dying process.

Term:

Occasional

Type:
- SOC-355 Women and Health

  Credits:
  4.00

  Description:
  An exploration of topics that relate particularly to women as providers and consumers in the health care system. The course will consider historical and current information on issues of reproduction, technology, health and illness.

  Term:
  Occasional

- SOC-357 Global Health and Healing

  Credits:
  4.00

  Description:
  An examination of how different cultures understand health and illness. Healing approaches from Asia, Africa and the Americas will be explored.

  Term:
  Occasional

  Type:
  Cultural Diversity Opt B, Diverse Perspectives

- SOC-379 Anthropological Perspectives in Spain

  Credits:
  4.00

  Description:
  The recent changes in both Spain and Portugal are only the latest in a series of important transformations which these two countries have undergone over the past fifty years or so. In that time, they have both gone from being predominantly rural societies where the majority of the population live and work on the land to becoming industrial societies not unlike those of northern Europe and North America. Yet the underlying cultural heterogeneity of the peoples of the Iberian Peninsula has meant that different regions have often had very distinct actions to the various pressures toward political, economic, and social change. This seminar will examine the ethnographic
diversity of the Iberian Peninsula in its regional manifestations, using a specifically anthropological approach in order to better comprehend present-day Spain and Portugal. Offered on Madrid Campus only. 1 term - 4 credits

• SOC-380 Special Topics in Sociology: Peer Tutoring

Prerequisites:

Instructor's consent; ECR

Credits:

4.00

Description:

Specialized topics based on peer tutoring research and development. Content, prerequisites and hours to be announced.

Term:

Offered Both Fall and Spring

Type:

Expanded Classroom Requirement

• SOC-390 The Prison Experience, Literature and Film
An examination of prison writings, films, and the actual experience of prison life from literary and sociological perspectives. Students will have an opportunity to examine their own perspectives of the prison as a symbol and shadow in American Society and compare these impressions with the actual experience of inmates, correctional officers and others who have lived in the prison nation.

Term:
Occasional

• SOC-406 The Immigrant Experience

Prerequisites:
SOC-113 or SOC-116 and 4 credits of a SOC course at the 200 level or above

Credits:
4.00

Description:
The United States of America: A land of immigrants; The Great Melting Pot. This country has indeed attracted immigrants from all over the world. However, not all have been welcomed or treated equally. This course will investigate the reasons various immigrant groups (past and present) have come to the United States. We will also examine their experiences and the impact race, ethnicity, gender, class and social structures have had on them. During Spring Break the class will visit Ellis Island and the Tenement Museum in New York and the Lowell National Historical Park in Lowell. The class will also visit various sites in Boston throughout the semester.

Type:
Cultural Diversity Opt A, Expanded Classroom Requirement, Local Engagement Experience

• SOC-433 Senior Seminar

Prerequisites:
SOC 113 or 116 (with a grade of C or better) SOC 214, and SOC 315 or 333. Seniors only. Required of all majors.

Credits:
4.00

Description:
This course explores contemporary topics in crime and justice, interrelating empirical and theoretical analyses. Topical areas vary by semester and by instructor. Students engage in a substantial research project to demonstrate mastery. Required for all students in the Crime and Justice Concentration.
• SOC-453 Seminar in Sociology

Prerequisites:
SOC 113 or SOC 116 with a minimum grade of a C; SOC 214; SOC 310, SOC 315, or SOC 333; Seniors only.

Credits:
4.00

Description:
This course will explore topics in sociology, requiring students to synthesize their learning in sociology to analyze research and develop their own study plans. The purpose of this course is to summarize and refine accumulated knowledge in sociology. Students will demonstrate knowledge by engaging in a significant research project.

Term:
Occasional

• SOC-483 Internship in Sociology I

Prerequisites:
Students must be Sociology majors with at least a 3.0 GPA; must have at least sophomore status at the time of application; must have one full day free each week to work an internship. Applications for the Internship in Sociology I course must be approved by the Instructor.

Credits:
4.00

Description:
Students are provided with the opportunity to apply academic learning in a supervised internship consistent with their personal career goals or academic interest. The course covers such topics as career exploration and development, resume and cover letter writing, job fairs, and networking, and graduate school applications. In addition to the course assignments, students are required to complete a minimum full day internship each per week during the entire semester.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

• SOC-484 Internship in Sociology II

Prerequisites:
SOC 483. Students must be Sociology majors with at least a 3.0 GPA; must have at least sophomore status at the time of application; must have one full day free each week to work an internship. Applications for the Internship in Sociology I course must be approved by the Instructor.

Credits:
4.00

Description:
Students are provided an opportunity to intensify or extend their internship experience. The course covers such topics as mock interviewing, informational interviewing, and job fairs.

Term:
Offered Both Fall and Spring

Type:
Expanded Classroom Requirement

- SOC-510 Independent Study

Credits:
4.00

Description:
Members of the department hold special meetings with students and direct them in investigating topics of interest in sociology. Arrangements for independent study must be approved by the supervising instructor and the Department Chairperson.

Term:
Offered Both Fall and Spring

- Spanish Courses

Major Requirements: 11 courses, 41 credits

Core Requirements (3 courses, 9 credits)

- CAS-201 College to Career: Explore Your Options And Find Your Path

  Prerequisites:

  CAS students only. SBS students by special permission.Restricted to the following majors: Art History, Asian Studies, Biology, Economics, English, French, History, Humanities, International Economics, Music History, Philosophy, Physics, Radiation Science, Spanish, and Undeclared. Instructor consent required for all other majors.

  Credits:

  1.00

  Description:

  This course engages students in the early stages of career planning. Students will explore their interests, skills, values, and strengths, which will allow them to begin setting appropriate goals for professional development. Once students understand themselves in relation to the world of work, they will learn how to research careers and employment paths that fit with their goals.

- SPAN-201 Intermediate Spanish I

  Prerequisites:

  SPAN 102 or Instructor's consent
Credits:
4.00

Description:
Reviews Spanish grammar and examines Spanish through authentic materials of cultural interest. Students develop written and oral skills through compositions and audio-visual materials. Weekly laboratory sessions required.

Term:
Offered Fall Term

Type:

BA FOREIGN

Choose one of the following:

- **SPAN-202 Intermediate Spanish II**

  Prerequisites:
  
  SPAN 201 or Instructor's consent.

  Credits:
  
  4.00

  Description:
  Continues skills development from 201. Students read a collection of short stories, write compositions, develop cultural insights through comparative and contrastive assignments, and practice listening and speaking skills in weekly conversation sessions.

  Term:
  
  Offered Spring Term

  Type:
  
  BA FOREIGN,Diverse Perspectives

- **SPAN-205 Intensive Intermediate Spanish**

  Prerequisites:
  
  SPAN 201 or Instructor's consent

  Credits:
  
  4.00
Description:
A writing and reading intensive course for students who are thinking about minoring and possibly majoring in Spanish. There will be a brief review of grammar, but the primary materials will come from the textbook, LAZOS, with ancillary materials from the print media and audio-visual sources. A weekly tertulia will be required instead of language lab.

Term:
Alternates Fall & Spring

Type:
BA FOREIGN

Note:
To qualify for admittance to the major, a student must complete the core requirements with an average grade of “B.”

Advanced Courses (8 courses, 32 credits)

- **SPAN-315 Business Spanish**
  
  Prerequisites:
  
  SPAN 290 or SPAN 300 or Instructor's consent.

  Credits:
  
  4.00

  Description:
  
  Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

  Type:
  
  Diverse Perspectives, Global Engagement Experience

Choose one of the following:

- **SPAN-290 Advanced Composition & Conversation**
  
  Prerequisites:
  
  Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

  Credits:
Description:
Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

Term:
Offered Fall Term

Type:
BA FOREIGN, Diverse Perspectives

• SPAN-300 Intro to Cultural Texts

Prerequisites:
Spanish 202, 203, 250 or Instructor's consent.

Credits:
4.00

Description:
Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:
Offered Spring Term

Type:
Humanities Literature Requirement, BA FOREIGN

Choose two of the following:

• SPAN-301 Spanish Culture and Civilization

Prerequisites:
Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:
4.00
Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:
Alternates Fall & Spring

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

• SPAN-302 Indigenous and Colonial Latin America

Prerequisites:
Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

Credits:
4.00

Description:
Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonization. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

Term:
Alternates Fall & Spring

Type:
Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN, Diverse P

• SPAN-303 Modern and Contemporary Latin America

Prerequisites:
SPAN 202 or 203 or Instructor's consent. SPAN 290 or 300 strongly recommended.

Credits:
4.00

Description:
Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as
politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

Type:
Diverse Perspectives

• **SPAN-305 Living in Translation**

  **Prerequisites:**
  SPAN 250, 290, or 300 or Instructor's consent.

  **Credits:**
  4.00

  **Description:**
  Examines the process and theory of translation. Materials are drawn from the literary world, the mass media (i.e. advertising, marketing, news, entertainment), and professional sources. Students gain further insights about the linguistic, cultural, and ethical dimensions of the field. Additional grammar review provided as needed.

  **Term:**
  Occasional

• **SPAN-390 Introduction to Latin American and Caribbean Literature**

  **Prerequisites:**
  SPAN 300; SPAN 302 is strongly recommended

  **Credits:**
  4.00

  **Description:**
  Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

  **Term:**
  Occasional

  **Type:**
  Cultural Diversity Opt B, Humanities Literature Requirement, BA FOREIGN, Diverse Perspectives
• SPAN-427 U.S. Mexican Border in the New Millennium

    Prerequisites:

    SPAN 290 or 300 or Instructor's consent

    Credits:

    4.00

    Description:

    Explores the literature, culture, and history of the United States-Mexico Border, and analyzes the profound changes that the gain/loss of territories created by the Treaty of Guadalupe Hidalgo caused for the citizens in the region. Emphasis is on contemporary border theatre and film. Students read works of Salcedo, Galindo, Mijares, Rascon Banda, among others, and examine contemporary films and documentaries such as Senorita Extraviada, Victoria para Chino, and Crossing Arizona.

    Term:

    Occasional

    Type:

    BA FOREIGN

Choose four additional electives above SPAN-205

Note:

A maximum of two courses from the following list can count toward the major:

• SPAN-408 Latin American Cinema

    Prerequisites:

    Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

    Credits:

    4.00

    Description:

    Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

    Term:
• **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

• **SPAN-418 Through the Eyes of the Storyteller / Latin American Fiction and Film**

Prerequisites:

ENG 102 or ENG 103 or Instructor's consent. SPAN 300 and SPAN 302 are strongly recommended for Spanish and Latin American and Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the intersection between literature and film and the relationships between the written word and the cinematic image. The writers and cinematographers studied represent mainstream as well as marginal voices that address issues of race, gender, sexual orientation and socio-economic class in South America, the Caribbean, and Mexico.

Term:
A maximum of four courses taken at other institutions or as part of a department-approved study abroad program in a Spanish-speaking country may apply toward the major.

Any Seminar for Freshmen with a topic related to the Spanish-speaking world (e.g., culture, politics, society) counts toward the major.

AP Credit:

Incoming students who receive a score of "4" or "5" on the AP Spanish examination have fulfilled the SPAN-201, SPAN-202/205 core requirement for the major.

**Residency Requirement Policy:** In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.

Spanish

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Honors
- Spanish Courses

In order to be considered for honors in Spanish, a student must satisfy the following criteria:

1. Students interested in honors should consult with the department chair during the spring semester of the junior year. Qualifying students must have a 3.2 overall GPA as well as a 3.5 or higher GPA in Spanish courses.

2. Honors candidates should register for SPAN-502 in the fall semester of the senior year. Under the guidance of a faculty member, they will use this course to complete a research paper. This paper will be evaluated by all professors in the student’s field of study. If the evaluation is positive, the student will make an oral presentation of the paper in the spring.

- SPAN-502 Honors Thesis

- **SPAN-210 Spanish in the Workplace**

  **Credits:**

  4.00

  **Description:**

  This course is designed for students who have successfully completed Spanish (201) at Suffolk or its equivalent elsewhere. Through a systematic review of grammar, a diversity of readings, and oral as well as written work, students will increase their lexical and grammatical knowledge of Spanish language specific to the workplace in order to communicate more easily and comfortably. Students will also be better prepared to deal with the specific themes related to business introduced in the course. (This course is not for Spanish minors or majors, but may be taken as a free elective.)

- **SPAN-290 Advanced Composition & Conversation**

  **Prerequisites:**

  Prerequisite: Spanish 202, 203 or 250 or Instructor's consent

  **Credits:**

  4.00

  **Description:**

  Develops written and oral skills in various contexts and registers. Emphasis on strengthening written skills and learning to speak clearly and persuasively in Spanish. Short texts and audio-visual materials provide the basis for classroom activities which include regularly assigned essays, group discussions and debates.

  **Term:**

  Offered Fall Term

- **SPAN-295 Spanish in the Workplace**

  **Credits:**

  4.00

  **Description:**
This course is designed for students who have successfully completed Spanish (201) at Suffolk or its equivalent elsewhere. • SPAN-300 Intro to Cultural Texts

Prerequisites:
Spanish 202, 203, 250 or Instructor's consent.

Credits:
4.00

Description:
Explores a selection of Peninsular and Latin American cultural materials. Primarily examines texts from different literary genres (narrative, drama, essay, and poetry). Develops critical skills required in more advanced Spanish courses, through close readings and textual analysis. Activities include regularly assigned essays, group discussions, and short scene work.

Term:
Offered Spring Term

Type:
Humanities Literature Requirement, BA FOREIGN

• SPAN-301 Spanish Culture and Civilization

Prerequisites:
Spanish 202, 203 or 250. Spanish 290 or 300 are strongly recommended

Credits:
4.00

Description:
Examines the civilization and culture of Spain highlighting its historical development and cultural manifestations from pre-historic times to the nineteenth century. Students improve their four skills through activities that include discussions, oral presentations, and writing assignments based on reading and films.

Term:
Alternates Fall & Spring

Type:
• **SPAN-302 Indigenous and Colonial Latin America**

  **Prerequisites:**
  
  Spanish 202, 203 or 250 or Instructor's consent. Span 290 or 300 strongly recommended.

  **Credits:**
  
  4.00

  **Description:**
  
  Introduces students to the complexity Latin America by examining its roots in pre-Columbian America and the impact of Spanish exploration and colonisation. Places emphasis on cultural, economic, historical, philosophical, political and religious patterns that define the region. Includes class discussions, oral presentations, and writing assignments based on reading and audio-visual material.

  **Term:**
  
  Alternates Fall & Spring

  **Type:**

• **SPAN-303 Modern and Contemporary Latin America**

  **Prerequisites:**
  
  SPAN 202 or 203 or Instructor’s consent. SPAN 290 or 300 strongly recommended.

  **Credits:**
  
  4.00

  **Description:**
  
  Examines the path taken by Latin American and Caribbean countries to build independent nations out of colonial territories highlighting the 19th, 20th, and 21st centuries, ethnic plurality, and cultural complexity in areas such as politics, religion, sociology, economics, customs, music & film. The cultural contributions of Spanish-speaking minorities in the United States are also addressed. Includes class discussions, oral presentations, and writing assignments based on readings and audio-visual material.

  **Type:**
  
  Diverse Perspectives

• **SPAN-305 Living in Translation**

  **Prerequisites:**
Examines the process and theory of translation. Materials are drawn from the literary world, the mass media (i.e. advertising, marketing, news, entertainment), and professional sources. Students gain further insights about the linguistic, cultural, and ethical dimensions of the field. Additional grammar review provided as needed.

Term:
Occasional

- **SPAN-315 Business Spanish**

  Prerequisites:
  SPAN 290 or SPAN 300 or Instructor's consent.

  Credits:
  4.00

  Description:
  Integrates language learning with culture via business context of the Hispanic world. Spanish for banking and finance, marketing and advertising, and international commerce are highlighted. Students increase their cross-cultural understanding and written and oral proficiency in business Spanish through a wide range of assignments.

  Type:
  Diverse Perspectives, Global Engagement Experience

- **SPAN-340 Hispanic Culture Today: Trans-Atlantic Perspective**

  Prerequisites:
  Take SPAN 290 or SPAN 300 or Instructor's consent.

  Credits:
  4.00

  Description:
  An examination of key issues in Hispanic culture today through the study of literature, film, music and TV. The purpose of the course is twofold: To introduce the students to major themes in recent Hispanic society and culture and, to develop the necessary skills to read and analyze literary texts and other cultural forms. Topics to be discussed include dictatorship and democracy, women and representation, political and domestic violence, national identity, immigration, and mass culture. The selected materials will include texts by authors like Manuel
Rivas, Mario Vargas Llosa, Carlos Fuentes, Cristina Peri Rossi, Rosa Montero, Carlos Monsivais, and Roberto Bolano among others. (Madrid campus only)

Type:

BA FOREIGN

- **SPAN-350 Spanish Cultural Studies**

  Credits:

  4.00

  Description:

  This is an interdisciplinary course that will examine the historical and socio-economic causes of contemporary Spanish culture. Material will be drawn from a variety of sources including: history, sociology, gender studies, literature and philosophy. Extensive reference will be made to the non-Western cultures which have made Spain what it is today. (Usually taught in English). (Madrid campus only)

- **SPAN-360 Madrid Cosmopolitan City**

  Prerequisites:

  SPAN-290 or SPAN-300 or Instructor's consent

  Credits:

  4.00

  Description:

  This course is designed to provide students with a basic knowledge of the city of Madrid in terms of its historical, cultural, and social development. Contemporary aspects of the city such as its rise to prominence amongst the capitals of Europe and the phenomenon of recent immigration patterns will also be discussed. All classes will be conducted in Spanish. Specific grammar points will be reviewed as needed. (Madrid campus only)

  Type:

  BA FOREIGN, Global Engagement Experience

- **SPAN-365 Spanish Cities: An Ongoing Transformation**

  Prerequisites:

  Take SPAN-290; Taught in Spanish

  Credits:

  4.00

  Type:
• SPAN-390 Introduction to Latin American and Caribbean Literature

Prerequisites:
SPAN 300; SPAN 302 is strongly recommended

Credits:
4.00

Description:
Examines authors from Latin America and the Caribbean in their historical and cultural contexts. Reading and class discussions consider the relationship between the writer and society by covering such topics as colonialism, the oral tradition, modernism and the emergence of new narratives in the twentieth century. The Inca Garcilaso, Sor Juana, Carlos Fuentes, Rigoberta Menchu, and Pablo Neruda are among some writers studied.

Term:

• SPAN-405 Women's Voices in Latin America

Prerequisites:

SPAN-300; Spanish 302 or its equivalent is strongly recommended

Credits:

4.00

Description:

Examines the changing roles of women in Mexico, the Caribbean, Central and South America through fiction, non-fiction, drama, poetry and film. Special focus is placed on the impact that changes in social ideology and culture have had on their identity and writings. Texts available in English.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement, BA FOREIGN

• SPAN-407 Latin American Short Narrative

Prerequisites:

Spanish 300; or Instructor's consent; Spanish 302 is strongly recommended

Credits:

4.00

Description:

Explores some of the major trends in the twentieth century Latin American story telling. Readings reflect the vast array of voices and styles, beginning with fantastic literature of the 1930's, the birth of magical realism and the more contemporary, socio-political narratives. Authors include Isabel Allende, Julio Cortazar, Rosario Castellanos, Gabriel Garcia Marquez, Juan Rulfo, Luisa Valenzuela, among others.

Term:

Occasional

Type:

Humanities & History, Humanities Literature Requirement, BA FOREIGN

• SPAN-408 Latin American Cinema

Prerequisites:
Take ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Begins with the Cuban revolution as a point of departure and examines films from Argentina, Chile, Colombia, Mexico, and other Latin American countries. Students explore the relationship between film & society and consider how knowledge of a culture and its history is influenced and shaped by what is seen on the screen. Films in Spanish with English subtitles.

Term:

Occasional

Type:

Cultural Diversity Opt B, Humanities & History, Humanities Literature Requirement

- **SPAN-410 Representation and Reality in Spanish Cinema**

Credits:

4.00

Description:

This course offers the students a panoramic view of the most representative Spanish films from the 1950's until today, with special emphasis on its social, political, artistic and cultural context. Films will be viewed in Spanish with English subtitles. Conducted in English, the course will be open to both non-majors in Spanish as well as to advanced-level Spanish majors and minors, with the latter carrying out their written work and individual meetings with the instructor in Spanish.

- **SPAN-416 Border Crossings the Latino Experience in the USA**

Prerequisites:

ENG-102 or ENG-103 or Instructor's consent. Span 302 is strongly recommended for Spanish and Latin American & Caribbean Studies majors and minors.

Credits:

4.00

Description:

Examines the myth of a singular Latino experience in the United States through a variety of genres and authors. Issues relating to culture, language, family, and religion are among some of the topics explored. Authors include Sandra Cisneros, House on Mango Street, Junot Diaz, The Brief Wondrous Life of Oscar Wao, Julia Alvarez, How the Garcia Girls Lost Their Accents, Tato Laviera, and American.
Term: Occasional

Type: Cultural Diversity Opt A, Humanities Literature Requirement

- **SPAN-417 Changes in Social Values in Spain 1975 - 2005**

  **Prerequisites:**
  Take SPAN 290 or SPAN 300 or Instructor's consent. SPAN 350 is strongly recommended.

  **Credits:**
  4.00

  **Description:**
  In this course we will study the transition of Spain from dictatorship to democracy from an interdisciplinary perspective based mostly on the analysis of literary works, film, visual arts and music besides relevant theoretical articles by major Spanish and international intellectuals. Youth culture (sex, drugs and rock and roll), the feminist movement, nationalistic demands, and Spain's subsequent incorporation into the European Union will be highlighted. (Madrid campus only)

  **Type:**
  BA FOREIGN

- **SPAN-418 Through the Eyes of the Storyteller / Latin American Fiction and Film**

  **Prerequisites:**
  ENG 102 or ENG 103 or Instructor's consent. SPAN 300 and SPAN 302 are strongly recommended for Spanish and Latin American and Caribbean Studies majors and minors.

  **Credits:**
  4.00

  **Description:**
  Examines the intersection between literature and film and the relationships between the written word and the cinematic image. The writers and cinematographers studied represent mainstream as well as marginal voices that address issues of race, gender, sexual orientation and socio-economic class in South America, the Caribbean, and Mexico.

  **Term:**

- **SPAN-427 U.S. Mexican Border in the New Millennium**

  **Prerequisites:**
  
  SPAN 290 or 300 or Instructor's consent

  **Credits:**
  
  4.00

  **Description:**
  
  Explores the literature, culture, and history of the United States-Mexico Border, and analyzes the profound changes that the gain/loss of territories created by the Treaty of Guadalupe Hidalgo caused for the citizens in the region. Emphasis is on contemporary border theatre and film. Students read works of Salcedo, Galindo, Mijares, Rascon Banda, among others, and examine contemporary films and documentaries such as Senorita Extraviada, Victoria para Chino, and Crossing Arizona.

  **Term:**
  
  Occasional
• **SPAN-428 From Script to Performance: Contemporary Latin American Theatre**

Prerequisites:

Span 290 or 300; Span 302 is strongly recommended

Credits:

4.00

Description:

Students examine the contemporary world of Latin American Theatre. A study of basic theatre concepts and methodology prepares students to perform in Noche de teatro latinoamericano, a public performance of three one-act plays from contemporary Latin American Playwrights. Publicity and set design are also part of the course framework.

BA FOREIGN

- SPAN-I295 Spanish in the Workplace Internship

Credits:
0.00

Description:
Internship in Madrid, Spain. At least 12 hours a week working for an organization. Designed to give students an international professional learning opportunity. It takes place concurrently with SPAN 295.
Statistics

No major or minor offered. Selected courses in statistics are available each semester.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- **Statistics Courses**

- **STATS-240 Introduction to Statistics**

  Prerequisites:

  Math 128 or higher. REMINDER: STATS 240 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

  Credits:

  4.00

  Description:

  Topics include: data presentation, measures of central locations and dispersion, probability and probability distributions, estimation, hypothesis testing, simple and multiple regression models. The use of Excel and SPSS will be emphasized throughout the course. 1 term - 4 credits (4 hours per week). Normally offered each semester. STATS 240 satisfies the same requirements as STATS 250

  Type:

  Quantitative Reasoning

- **STATS-250 Applied Statistics**

  Prerequisites:

  MATH 128 or higher. REMINDER: STATS 250 is a required prerequisite MKT 220, FIN 200 and ISOM 201 (prerequisite for ISOM 319)

  Credits:

  4.00
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Normally offered each semester.

Type:
Quantitative Reasoning

• STATS-H250 Honors Applied Statistics

Prerequisites:
MATH-128, MATH 130, 134, 146, 164 or 165 and Honors Course; GPA of 3.3 or higher

Credits:
4.00

Description:
Application of statistical analysis to real-world business and economic problems. Topics include data presentation, descriptive statistics including measures of location and dispersion, introduction to probability, discrete and continuous random variables, probability distributions including binomial and normal distributions, sampling and sampling distributions, statistical inference including estimation and hypothesis testing, simple and multiple regression analyses. The use of computers is emphasized throughout the course. Prerequisite: MATH 130, MATH 134, MATH 146, or MATH 165 Honors Course GPA of 3.2 or higher required. 1 term - 4 credits Normally offered every year.

Type:
Quantitative Reasoning, Honors

• STATS-350 Applied Statistical Methods

Prerequisites:
STATS 250

Credits:
4.00

Description:
This application-oriented course is designed to go beyond the topics covered in STATS 250. It includes topics like Analysis of Variance (ANOVA), special topics in regression analysis and index numbers. Further, time series data, which consist of values corresponding to different time intervals, are analyzed. The objective is to examine past time series values to forecast, or predict future values. Seasonal variations are also incorporated in the forecasts.
The course will provide useful computer skills involving various statistical packages and is an excellent preparation for graduate work in business and social sciences.

Type:

Social Science

**STATS-R240 Statistics Recitation**

Credits:

0.00

Description:

This course is taken as a co-requisite to Stats240. The recitation is a hybrid course. Once every two weeks students meet with an instructor to do work that enhances understanding of the course material. On alternate weeks students work on individual and group homework.

Theatre

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Major Requirements
- Minor Requirements
- Theatre Courses

Major Requirements: 12 courses, 35-42 credits, plus 4 Practicum courses

Core Requirements (6 courses, 11-18 credits)

- THETR-129 Acting
  
  Credits:
  
  4.00
  
  Description:
  
  This introduction to acting prepares students for work in production and develops skills in all forms of communication. The first part of the course uses improvisational exercises based on the Stanislavski method to teach fundamental acting techniques. The second half of the course applies those techniques to scene work from major 20th century plays. This course is a core requirement for all Theatre Majors.
  
  Term:
  
  Offered Both Fall and Spring
  
  Type:
  
  Arts Admin Minor Elective

- THETR-187 Intro to Stage Management
  
  Credits:
  
  4.00
  
  Description:
This course will teach both the methods and principles behind stage management demonstrating how to support a production while facilitating the work of directors, designers, and actors. In addition to teaching the specific technical skills necessary to each part of the production process, this course will also address the more subtle intellectual and managerial skills that make stage management an art. Satisfies a core requirement for Theatre majors.

Term:
Offered Fall Term

Type:
Arts Admin Minor Elective

- **THETR-191 The Freshman Experience**

  Prerequisites:
  Theatre Majors and minors only.

  Credits:
  1.00

  Description:
  This course helps orient Theatre Department Freshmen to university life while presenting them with practical information about the department. Topics will include production practicum, student showcases, auditioning, advising, capstone projects, internships and study abroad opportunities. Theatre professors, staff, and visiting professionals come to classes to discuss their areas of expertise. Students are made aware of arts activities on campus and in the city of Boston for which weekly journals are required. A script and performance of at least one play in Boston will be studied.

- **THETR-488 Professional Internships**

  Prerequisites:
  instructor's consent and internship availability required

  Credits:
  1.00- 4.00

  Description:
  This course provides students with the opportunity to receive credit for their work on an approved internship assignment in the professional performing and visual art world. At the successful completion of the internship, students will be required to submit a written analysis of their experience as well as a journal documenting the daily events of their project. Professional internships are difficult to secure. Interested students are advised to contact members of the Theatre Department faculty at least one semester in advance to facilitate this opportunity.

  Term:
- **THETR-508 Capstone Experience**

  **Credits:**

  0.00

  **Description:**

  The capstone experience demonstrates a student's high level of practical and/or academic facility and prepares them for their transition into the world of professional theatre and graduate school. Upper Level production activities within the theatre department that may fulfill this requirement are directing, designing, stage managing, acting a major role, playwriting, or some special approved project. Students may also fulfill this requirement by completing a Senior Honors Thesis.

- **THETR-511 Professional Development**

  **Prerequisites:**

  Theatre majors or minors only.

  **Credits:**

  1.00

  **Description:**

  This course is designed to give students the tools to plan for and support a career path after graduation. Students will acquire effective business skills, learn the importance of proactivity and self-reliance, and develop strategies for establishing and sustaining professional networks of support. Students will also learn how to execute effective interviewing techniques, gain insight concerning personal strengths and weaknesses, and acquire life-long learning skills in order to begin their professional careers with defined strategic goals that will support their aspirations. Master Classes with professional theatre artists and field trips to professional theatres will also be included.

**Electives (6 courses, 24 credits)**

Choose three of the following:

- **THETR-260 Broadway Musicals**

  **Credits:**

  4.00

  **Description:**

  This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway's greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to
shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Term:
Offered Fall Term

Type:
Cultural Diversity Opt A, Humanities Literature Requirement, Diverse Perspectives, Vis. & Perform Thry

• THETR-265 Introduction to Theatre: Prehistory to Melodrama

Credits:
4.00

Description:
This survey course provides students with an historical, philosophical, and aesthetic overview of theatre practices from the Golden Age of Greek drama to 19th-century melodrama and early experiments in realism. Through readings, lectures, and discussions, the class will explore the theatre's persistent capacity to mirror the societies that produce it. Satisfies a core requirement for Theatre majors and the Humanities requirement. Normally offered alternate years.

Term:
Occasional

Type:
Humanities & History, Humanities Literature Requirement

• THETR-266 Intro to Theatre: 20th Century

Credits:
4.00

Description:
Picking up chronologically where THETR 225 leaves off, this survey course is designed to provide students with an understanding of modern Western theatre. Beginning with a melodrama, plays will include representative works of realism, naturalism, expressionism, epic theatre, theatre of cruelty, theatre of the absurd, and metatheatricality. Lectures and class discussions will explore how these concepts translate to acting and production techniques as well as what they imply as artistic responses to a modern and post-modern world. Satisfies a core requirement for Theatre Majors.

Term:
Offered Spring Term

Type:
• THETR-267 Introduction to Theatre: Contemporary American

Credits:
4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:
Occasional

Type:

Humanities & History,Cultural Diversity Opt A,Humanities Literature Requirement,Diverse Perspectives

Choose one of the following:

• THETR-151 Introduction to Design

Credits:
4.00

Description:

This rigorous class will give students the fundamental concepts, vocabulary and skills used to design for the stage such as: color, line, composition, research and script analysis. The class has a written component and is intended to prepare students to design workshop productions in the Studio Theatre. Students will be expected to complete a minimum of ten hours of production work for Theatre Department productions.

Term:
Offered Spring Term

• THETR-152 Introduction to Stagecraft

Credits:
4.00
This rigorous survey class will give students the fundamental concepts, vocabulary, and skill to implement basic scenery, lighting, costuming, props and sound. The class is intended to prepare students as technical support for workshop productions in the Studio Theatre. There is a written component and students will be expected to complete a minimum of ten hours of technical work on Theatre Department productions.

Term:
Offered Fall Term

Choose one of the following:

- **THETR-351 Set Design**

  **Prerequisites:**
  Take THETR-237 THETR-250 or THETR-251; or instructor's consent

  **Credits:**
  4.00

  **Description:**
  This is a studio course exploring the process of interpreting dramatic scripts in visual, three-dimensional ways. Projects will include abstract visual responses, group installations, enacting texts, visual research and textual analyses as well as ground plans and models for sets. Students will need a variety of painting and drawing supplies and equipment. A willingness to think beyond the box set to discover vital ways to shape a production is essential.

  **Term:**
  Offered Spring Term

  **Type:**
  Humanities & History, Humanities Literature Requirement

- **THETR-359 Lighting Design**

  **Prerequisites:**
  Take THETR-187 THETR-152 or THETR-151; or instructor's consent

  **Credits:**
  4.00

  **Description:**
  Students will explore the basic process of lighting design for the theatre through hands-on, practical experience, conceptual work, and a study of the history of lighting design. The course will focus on common vocabularies,
DESCRIPTION OF IMAGERIES FROM TEXT, PHYSICAL FORMS OF DESIGN EXPRESSION AND GENERAL APPROACH. IN ADDITION, STUDENTS WILL LEARN BASIC SKILLS IN ELECTRICS TO SUPPORT THE DESIGN PROCESS. SAMPLE ASSIGNMENTS MIGHT INCLUDE WRITTEN CRITIQUES OF LOCAL PRODUCTIONS, DESIGN APPROACH STATEMENTS WITH LIGHTING RESEARCH, LIGHTED ONE ACT PLAYS IN THE STUDIO THEATRE, AND LIGHTING SET MODELS. NORMALLY OFFERED ALTERNATE YEARS.

TERM:

OCCASIONAL

• THETR-433 ADVANCED SINGING FOR THE STAGE: BROADWAY MUSICALS TODAY

PREREQUISITES:

INSTRUCTOR'S CONSENT REQUIRED

CREDITS:

4.00

DESCRIPTION:

FOCUSING ON MUSICALS WRITTEN FROM THE 1990-THE PRESENT E.G. NEXT TO NORMAL, THE LAST FIVE YEARS, AND SPRING AWAKENING, THIS ADVANCED STUDIO COURSE PROVIDES STUDENTS WITH AN INTEGRATED APPROACH TO SINGING AND STAGE PERFORMANCE. THE FAST-PACED TEMPO OF THE CLASS WILL ENCOURAGE STUDENTS TO BUILD ON THEIR PREVIOUS TRAINING AND EXPERIENCE AND TO BECOME INCREASINGLY INDEPENDENT AS THEY PREPARE FOR AUDITIONS AND PERFORMANCE WORK BEYOND THE UNIVERSITY. PRIVATE VOCAL COACHING AND ACTING COACHING WILL BE SCHEDULED OUTSIDE OF CLASS. STUDENTS WILL BE EXPECTED TO PREPARE SELECTED SOLOS OR DUETS AND LEARN ADDITIONAL CHOREOGRAPHED GROUP NUMBERS WHICH WILL BE PRESENTED AT THE END OF THE TERM FOR A PUBLIC PERFORMANCE.

TERM:

OCCASIONAL

• THETR-461 PLAY ANALYSIS

CREDITS:

4.00

DESCRIPTION:

THIS SEMINAR COURSE EXAMINES SHAKESPEARE'S PLAYS AND THEIR MODERN CORRELATIVES. (I.E. HAMLET AND THE SEAGULL, KING LEAR AND ENDEGAME) STUDENTS READ THE TEXTS OUT LOUD IN CLASS EXAMINING THE MEANING, ACTION, OBJECTIVE, AND PHILOSOPHICAL AND HISTORICAL CONTEXTS WITH THE PROFESSOR. THE GOAL IS TO GET CLOSER TO THE ORIGINAL INTENTIONS OF THE AUTHOR AND DETERMINE NOT ONLY THE BASIC THEME AND CHARACTER RELATIONSHIPS, BUT THE KIND OF MIND THAT COULD CREATE SUCH A PLAY. IN ANALYZING A MODERN PLAY STUDENTS ALSO EXAMINE THE IMPACT OF SHAKESPEARE'S MIND ON FUTURE PLAYWRIGHTS. THERE WILL BE A MIDTERM PAPER AND A FINAL EXAM.

TERM:

OFFERED FALL TERM

TYPE:
• THETR-475 Directing II

Prerequisites:

THETR-375 or instructor's consent

Credits:

4.00

Description:

Directing II focuses on the development of an individual directorial point of view and explores a variety of theoretical and applied approaches to cultivating interpretive skills. The course also examines how the director reconciles traditional theatrical conventions and techniques with the ability to create fresh, innovative and personal results. Students will stage weekly theatrical responses to class readings in addition to creating a fully-realized final directing project.

Term:

Offered Spring Term

• THETR-477 Playwriting II

Prerequisites:

THETR-377 or instructor's consent

Credits:

4.00

Description:

Playwriting II is a continuation, deepening and thickening of the principles learned in Playwriting I. A course designed for dedicated writers, students are expected to explore a wide variety of playwriting challenges, skills and techniques. Student works will be regularly shared and discussed in class. Students will also be assigned plays by recognized playwrights to discuss and analyze in class. Playwriting II students are encouraged to participate in PlayDay!, an annual reading of new student-written plays. Normally offered alternate years.

Occasional

- **THETR-322 Acting for the Camera**

  **Prerequisites:**

  THETR-129 or instructor's consent

  **Credits:**

  4.00

  **Description:**

  This course gives students an understanding of the acting challenges unique to film, television, and commercial acting and helps them develop an effective process for on-camera performance. The material in this class is drawn from various media as well as from students' own research and writing. Class exercises and presentations are video taped, viewed, and critiqued by the students and the instructor as students grow and learn. Students also become familiar with the language and demands of professional production as well as how the technical process affects their performance.

  **Term:**

  Offered Fall Term

- **THETR-323 Audition Training**

  **Credits:**

  4.00

  **Description:**

  Learning how to prepare for effective auditions is essential training for anyone who wishes to be cast in theatre productions. This studio course will provide practical guidelines and useful strategies to help students be at their best during the always competitive audition process. Over the course of the term students will not only prepare to participate confidently in professional and non-professional auditions, but learn to enjoy the journey as well.
• THETR-329 Acting II

Prerequisites:
THETR 229 or THETR-129 or instructor's consent

Credits:
4.00

Description:
A continuation of Acting I with special emphasis on verse and heightened language. Students will explore acting Shakespeare and other classical plays and will rehearse and perform short projects. Students will also learn to think, read and write about classical performance.

• THETR-333 Singing for the Stage: Rock, Pop, & Progressive

Credits:
4.00

Description:
Focusing on classic rock, pop, and progressive musicals from the 1970s-1990s, e.g. A Chorus Line, Chicago, and Into the Woods this studio course provides students with an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. They will also be introduced to basic music theory and how to plunk out notes on a piano - skills that will make them more independent and confident performers. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. Assigned solos and choreographed group numbers will be presented weekly in class and at the end of the term in a recital for an invited audience.

Choose one of the following:
• THETR-260 Broadway Musicals

Credits:
4.00

Description:

This course is a survey of American musical theatre from its roots in the mid-19th century to the present. It provides the analytical tools and historical insight to more fully appreciate Broadway’s greatest musicals and musical theatre artists. Students will explore the ways in which American forms of popular entertainment helped to shape Broadway musicals from their infancy through their adulthood. The course also explores the ways in which musicals provided opportunities for African-Americans, women, immigrants, and the GLBT community.

Humanities & History, Honors

• THETR-267 Introduction to Theatre: Contemporary American

Credits:
4.00

Description:

This course provides a formal introduction to the theories and practices strategically used by American theatre artists after the Second World War. Special emphasis is placed on theatre artists exploring issues of cultural identity including works by GLBT, African-American, Asian-American, and Latin American playwrights. These playwrights may include Tony Kushner, Paula Vogel, Suzan-Lori Parks, Adrienne Kennedy, August Wilson, David Henry Hwang, Philip Kan Gotanda, Eduardo Machado, and Melinda Lopez. The course will also provide an introduction to trends in post-modern theatre practices related to emerging work of the auteur director, solo performers, and interdisciplinary collectives. Satisfies a core requirement for Theatre majors. Normally offered alternate years.

Term:
Occasional

Type:
• THETR-281 Arts Administration I

Credits:
4.00

Description:
The expansive world of arts administration provides a wealth of rewarding career opportunities. This course will provide a fundamental overview of the managing, marketing, fundraising, and financial management functions of the performing and visual arts organizations. Using Suffolk’s Modern Theatre as a laboratory, as well as site visits to some of Boston’s greatest arts and culture institutions, we will investigate real world successes and challenges and discover what special talents each individual student can bring to the management mix. This course is a core requirement for Suffolk’s new interdisciplinary Arts Administration minor.

• THETR-289 Managing the Start-Up Arts Organization

Credits:
4.00

Description:
Managing a start-up arts organization requires not only the financial, programming, development and interpersonal skills of day-to-day arts management, but the additional creative and imaginative abilities to attract and manage stakeholders, brand the organization, and create governance and hierarchical structures. Using Suffolk’s new Modern Theatre as a laboratory, we will investigate the process of starting-up, how it differs from organization to organization, and what special talents each individual student can bring to the management mix. Reading and writing are required for the course, as well as specific work projects either at the Modern or at a local start-up.

Term:
Occasional

Type:
Arts Admin Minor Elective

• THETR-291 Professional Development

Prerequisites:
Theatre majors or minors only.

Credits:
1.00

Description:
This course is designed to give you the tools to plan for and support your career path after graduation. Activities include audition/resume/cover-letter workshops; interviewing techniques; dressing for success; networking; identifying your personal brand; professional internships; and deciding whether graduate school is right for you. Master classes with professional theatre artists and field trips to professional theatres will also be included.

- **THETR-299 Vocal Technique**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  Vocal Technique provides students with an essential foundation to help ensure the safe and effective use of the speaking and singing voice. Topics will include alignment, relaxation, breath support, placement, resonance, vocal anatomy, and the care and protection of the voice under normal and stressful situations. Students will do oral presentations and have the option of singing in a master class setting. This is a studio course with a written component.
  
  **Term:**
  
  Offered Both Fall and Spring

- **THETR-304 Vocal Coaching II**
  
  **Credits:**
  
  4.00
  
  **Description:**
  
  This course is a continuation of Vocal Coaching I focusing on the music of living composers from 1996 to the present. Students may sign up for private coaching sessions as part of their weekly preparation for the course. Students will learn to think and write critically about the form. Normally offered alternate years.
  
  **Term:**
  
  Occasional

- **THETR-319 Study Abroad: Flamenco in Madrid**
  
  **Prerequisites:**
  
  Permission of Instructor
  
  **Credits:**
  
  4.00
  
  **Description:**
This is a three week, four credit, faculty led intensive course in Flamenco dance. The study of Flamenco immerses students in the rich cultural heritage of Spain's most popular and passionate art form. This unique program blends studio classes in the heart of Madrid with a study of the vibrant history and culture of Spain. Students interested in study abroad are encouraged to take language courses in the Humanities Department.

**Term:**
Occasional

**Type:**
Expanded Classroom Requirement, Cultural Diversity Opt B

- **THETR-322 Acting for the Camera**

  **Prerequisites:**
  THETR-129 or instructor's consent

  **Credits:**
  4.00

  **Description:**
  This course gives students an understanding of the acting challenges unique to film, television, and commercial acting and helps them develop an effective process for on-camera performance. The material in this class is drawn from various media as well as from students' own research and writing. Class exercises and presentations are video taped, viewed, and critiqued by the students and the instructor as students grow and learn. Students also become familiar with the language and demands of professional production as well as how the technical process affects their performance.

  **Term:**
  Offered Fall Term

- **THETR-323 Audition Training**

  **Credits:**
  4.00

  **Description:**
  Learning how to prepare for effective auditions is essential training for anyone who wishes to be cast in theatre productions. This studio course will provide practical guidelines and useful strategies to help students be at their best during the always competitive audition process. Over the course of the term students will not only prepare to participate confidently in professional and non-professional auditions, but learn to enjoy the journey as well.

  **Term:**
  Offered Fall Term
• THETR-329 Acting II

Prerequisites:

THETR 229 or THETR-129 or instructor's consent

Credits:

4.00

Description:

A continuation of Acting I with special emphasis on verse and heightened language. Students will explore acting Shakespeare and other classical plays and will rehearse and perform short projects. Students will also learn to think, read and write about classical performance.

Term:

Offered Fall Term

• THETR-333 Singing for the Stage: Rock, Pop, & Progressive

Credits:

4.00

Description:

Focusing on classic rock, pop, and progressive musicals from the 1970s-1990s, e.g. A Chorus Line, Chicago, and Into the Woods this studio course provides students with an integrated approach to singing and stage performance. Students will learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. They will also be introduced to basic music theory and how to plunk out notes on a piano - skills that will make them more independent and confident performers. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. Assigned solos and choreographed group numbers will be presented weekly in class and at the end of the term in a recital for an invited audience.

Term:

Occasional

• THETR-334 Singing for the Stage: Musicals From the Golden Age

Credits:

4.00

Description:

Focusing on classic musicals from 1950-1970 e.g., Pajama Game, Fiddler on the Roof, and Cabaret, this skills-based studio course exposes students to an integrated approach to singing and stage performance. Students will
learn the fundamentals of vocal technique which includes targeted vocal warm-ups and relaxation exercises in addition to the basics of breath support, placement, and phrasing. Students will also learn how to analyze musicals for their dramatic potential in order to make their performances more believable to an audience. Several classes will be devoted to audition preparation. Private vocal coaching and acting coaching will be scheduled outside of class. All students will work on assigned songs and choreographed group numbers which will be presented at the end of the term for an invited audience.

Term:
Occasional

• THETR-345 Broadway Dance

Credits:
4.00

Description:
Grounded in the fundamentals of dance, this course will focus on the rigors and vitality of dances created for the Broadway musical. Students will learn about the history of Broadway dance and will present choreography developed in class at the end of the semester for an invited audience. Students will learn to think and write critically about the form. Dance attire is required.

Term:
Occasional

• THETR-347 The Art and Artistry of Calling a Show

Prerequisites:
THETR-237 or instructor's consent

Credits:
4.00

Description:
In calling a show the stage manager cues all technicians to effect changes in lighting, sound, flying elements and special effects during performances. A well-called show is an artistic achievement no less than a well-acted, directed or designed show. Building on the ability to make a complete and accurate stage manager's book learned in Intro to Stage Management, this course will teach calling skills for theatre, opera, dance and performance art. The course will demonstrate the construction of cues and how they promote the artistic vision of the production. In-class work will utilize the Studio Theatre and give students real-time opportunities for calling cues, and will include play reading and analysis. Outside class work will include attending and writing analyses of professional performances.

Term:
Occasional
THETR-351 Set Design

Prerequisites:
Take THETR-237 THETR-250 or THETR-251; or instructor's consent

Credits:
4.00

Description:
This is a studio course exploring the process of interpreting dramatic scripts in visual, three-dimensional ways. Projects will include abstract visual responses, group installations, enacting texts, visual research and textual analyses as well as ground plans and models for sets. Students will need a variety of painting and drawing supplies and equipment. A willingness to think beyond the box set to discover vital ways to shape a production is essential.

Term:
Offered Spring Term

Type:
Humanities & History, Humanities Literature Requirement

THETR-356 Introduction to Costume Design

Prerequisites:
THETR 250 OR THETR 251 or by instructor's permission.

Credits:
4.00

Description:
This is a comprehensive studio course with a written component. The course explores many aspects of the design process including concept, research, collaboration, and full renderings. Normally offered alternate years.

THETR-359 Lighting Design

Prerequisites:
Take THETR-187 THETR-152 or THETR-151; or instructor's consent

Credits:
4.00

Description:
Students will explore the basic process of lighting design for the theatre through hands-on, practical experience, conceptual work, and a study of the history of lighting design. The course will focus on common vocabularies, descriptions of imageries from text, physical forms of design expression and general approach. In addition, students will learn basic skills in electrics to support the design process. Sample assignments might include written critiques of local productions, design approach statements with lighting research, lighted one act plays in the Studio Theatre, and lighting set models. Normally offered alternate years.

Term:
Occasional

- **THETR-361 Combat, Clown and Characters**

  Prerequisites:
  
  THETR-201 OR THETR-229 or instructor's consent

  Credits:
  
  4.00

  Description:
  
  Students compliment their practical theatre training with a wide range of physical and vocal skills. This three part class focuses on the art of creating a clown, the ability to safely build and execute a stage fight, and special work on creating a three dimensional character for the stage. Normally offered alternate years.

  Term:
  
  Occasional

- **THETR-362 Women on Stage**

  Credits:
  
  4.00

  Description:
  
  How do playwrights of different backgrounds and genders interpret female-ness? This class explores some of the great heroines of dramatic literature, as well as female playwrights and performers. Students will be encouraged to indulge their taste for drama, as well as ask deeper questions about how women on stage are presented, perceived, and constructed. Students will read, write and discuss plays in terms of their structure, plot, theme, and characterizations. Class activities may include watching videos and attending live theatrical productions.

  Cultural Diversity Opt A
• THETR-364 Dramaturgy

Prerequisites:

THETR-225, THETR-226, THETR-227, THETR-310, THETR-307, THETR-405, THETR-450, THETR-455, THETR-460, THETR-489, THETR-507 or THETR-510 or instructor's consent

Credits:

4.00

Description:

This course will explore the fundamentals of dramatic structure and investigate the various roles of the contemporary dramaturg. Through the in-depth analysis of texts, students will follow Aristotle's example in The Poetics and attempt to figure out what makes great plays tick. Weekly reading and writing assignments will be supplemented by live theatrical performances.

Term:

Occasional

• THETR-375 Directing I

Credits:

4.00

Description:

This conservatory-style course provides students with fundamental directing skills through lectures, readings, and weekly projects that explore composition, staging, text analysis, and directorial communication skills. Students in this course become eligible to propose their own projects to the Theatre Department for production consideration. Directing students are also encouraged to stage manage and assistant direct faculty productions both in and outside of the Department.

Term:

Offered Fall Term

Type:

Arts Admin Minor Elective

• THETR-376 Theatre of Protest: Techniques for the Performance of Social Activism, Subversion and Resistance

Credits:

1.00

Description:
This one-credit course is intended for those students who seek knowledge of theatrical techniques employed to respond quickly in public space to social and political injustice. The course will explore historical precedents of theatre of protest as a tool for resistance and change. These precedents include the strategic theatrical deployment of ritual, ceremony, song, satire, symbolism, puppetry and mythology. The course will also serve as a workshop for students to imagine, prepare and develop ideas, techniques and strategies which they can apply to their own social activism.

- **THETR-377 Playwriting**

  **Credits:**

  4.00

  **Description:**

  An introduction to playwriting, students will be required to submit weekly assignments which explore and refine fundamental components of the dramatist's craft including plot, character, conflict, voice, dialogue, rhythm, point of view, surprise, structure, and style. Students are encouraged to participate in Play Day!, an annual reading of new student-written plays. Normally offered every year.

- **THETR-384 The Art and Artistry of Calling a Show**

  **Prerequisites:**

  THETR-237 or instructor's consent

  **Credits:**

  4.00

  **Description:**

  In calling a show the stage manager cues all technicians to effect changes in lighting, sound, flying elements and special effects during performances. A well-called show is an artistic achievement no less than a well-acted, directed or designed show. Building on the ability to make a complete and accurate stage manager's book learned in Intro to Stage Management, this course will teach calling skills for theatre, opera, dance and performance art. The course will demonstrate the construction of cues and how they promote the artistic vision of the production. In-class work will utilize the Studio Theatre and give students real-time opportunities for calling cues, and will include play reading and analysis. Outside class work will include attending and writing analyses of professional performances.

  **Term:**

  Occasional

- **THETR-402 Vocal Coaching III**

  **Prerequisites:**

  Instructor's consent required

  **Credits:**
Description:

A rigorous, fast-paced studio course for motivated students with demonstrated proficiency in musical theatre performance. Building on basic music and acting theory explored in Vocal Coaching I and II and Acting the Song I and II, students will be expected to analyze and perform challenging new and known songs representing a wide range of styles and periods. Students will also be expected to write and think critically about musical theatre performance and prepare for at least one professional musical theatre audition outside the university. The class will culminate in a recital for an invited audience.

Term:

Occasional

• THETR-403 Solo Performance

Prerequisites:

THETR-229 or THETR-425 or instructor's consent

Credits:

4.00

Description:

This advanced level acting course introduces students to the world of performance art utilizing research, writing and performance techniques. Source material may be fictional, historical, personal or contemporary figures of particular interest to the student. Students will research and create their own pieces to be performed at the end of the term for an invited audience.

Term:

Offered Spring Term

• THETR-407 Playwriting II

Prerequisites:

THETR-307 or instructor's consent

Credits:

4.00

Description:

Playwriting II is a continuation, deepening and thickening of the principles learned in Playwriting I. A course designed for dedicated writers, students are expected to explore a wide variety of playwriting challenges, skills and techniques. Student works will be regularly shared and discussed in class. Students will also be assigned plays by recognized playwrights to discuss and analyze in class. Playwriting II students are encouraged to participate in PlayDay!, an annual reading of new student-written plays. Normally offered alternate years.
• THETR-421 Combat, Clown and Characters

Prerequisites:

THETR-201 OR THETR-229 or instructor's consent

Credits:

4.00

Description:

Students compliment their practical theatre training with a wide range of physical and vocal skills. This three part class focuses on the art of creating a clown, the ability to safely build and execute a stage fight, and special work on creating a three dimensional character for the stage. Normally offered alternate years.

Term:

Occasional

• THETR-422 Acting for the Camera II

Prerequisites:

Take THETR-232 or Instructor's consent

Credits:

4.00

Description:

Applying skills introduced in Acting for the Camera I, students produce and perform in a showcase video with more demanding material. Included in this course is a focus on the business of film and television work as it affects an acting career. From auditioning skills to on-set work ethics, students will work in class and on film locations to experience the realities of the film and television industries and learn to think and write critically about on-camera performance. Each student will have the opportunity to put together a demo reel showcasing their acting work prepared for class.

Term:

Offered Spring Term

• THETR-425 Advanced Scene Study

Prerequisites:

Take THETR-129
Using plays from the mid-20th century to the present, students will engage in advanced acting techniques to discover connections with the material at the deepest, most intimate level. The ability to apply highly sensitized analyzation to character, relationships and circumstances of each scene will be thoroughly explored and students will be encouraged to work outside of their comfort zones. Also, the awareness and execution of the emotional commitment needed to fulfill the life of each scene will be courageously explored and incorporated.

- **THETR-429 Theatre on the Go: Site-Specific Theatre**

  **Prerequisites:**
  THETR-129

  **Credits:**
  4.00

  **Description:**
  This project-based performance class explores the unique, specially adapted acting experience found working in unusual and sometimes public settings. Through improvisation and socio-drama exploration, students will write, produce and direct their own interactive and non-interactive performance pieces. This innovative team-building class will challenge your ideas of what and where theatre lives through discussion and performance. The semester will conclude with a group project to be performed publicly.

- **THETR-433 Advanced Singing for the Stage: Broadway Musicals Today**

  **Prerequisites:**
  Instructor's consent required

  **Credits:**
  4.00

  **Description:**
  Focusing on musicals written from the 1990-the present e.g. Next to Normal, The Last Five Years, and Spring Awakening, this advanced studio course provides students with an integrated approach to singing and stage performance. The fast-paced tempo of the class will encourage students to build on their previous training and experience and to become increasingly independent as they prepare for auditions and performance work beyond the university. Private vocal coaching and acting coaching will be scheduled outside of class. Students will be expected to prepare selected solos or duets and learn additional choreographed group numbers which will be presented at the end of the term for a public performance.

**Term:**
Occasional
• THETR-444 Choreography I
   Credits:
   4.00
   Description:
   This course encourages students to develop a broad palette of choreographic tools drawn from the work of early modern choreographers and theorists and post-modern techniques. The process of the class will include structured improvisations, analysis of historical and contemporary dance works, the development of a critical response process, journaling, and the creation of original solo and group work. Additionally, students will attend two dance concerts throughout the semester and submit written critiques of each performance. The class will culminate in the performance of self-selected compositions for an invited audience. Proper dance attire is required.

• THETR-451 Set Design II
   Prerequisites:
   THETR 331 or Instructor's Consent
   Credits:
   4.00
   Description:
   Taking up where THETR 331 left off, Set Design II is a studio course exploring the process of interpreting dramatic scripts in visual, three-dimensional ways at a much higher level of project realization. In addition to class work, students will develop advanced skills in model building, drafting and painting through independent studio work and individual meetings with the professor outside of class. Students will need a variety of painting and drawing supplies and equipment. Meets concurrently with Set Design I.

   Term:
   Occasional

• THETR-460 A House for Words to Live In
   Prerequisites:
   Prerequisites: THETR225 or THETR226, or THETR227 and THETR250 or THETR251 or THETR237 (or permission of the instructor)
   Credits:
   4.00
   Description:
An upper level course, of interest to directors and dramaturges as well as designers, about a remarkable period in American theatre history, explored within the context of four stage designers and the playwrights with whom they collaborated. Scripts by O'Neil, Williams, Miller, and Odets will be studied in conjunction with their revelatory original designs, which have become as iconic as the plays themselves. The designer's process, the collaborative nature of theatrical production, and the advances in theatre technology will also be explored. The course will have a seminar format, require independent reading and research, and be writing intensive, culminating with a final term paper presented to the class.

Term:
Occasional

- **THETR-461 Play Analysis**

  **Credits:**
  4.00

  **Description:**
  This seminar course examines Shakespeare's plays and their modern corollaries. (i.e. Hamlet and The Seagull, King Lear and Endgame) Students read the texts out loud in class examining the meaning, action, objective, and philosophical and historical contexts with the professor. The goal is to get closer to the original intentions of the author and determine not only the basic theme and character relationships, but the kind of mind that could create such a play. In analyzing a modern play students also examine the impact of Shakespeare's mind on future playwrights. There will be a midterm paper and a final exam.

  **Term:**
  Offered Fall Term

  **Type:**
  Arts Admin Minor Elective

- **THETR-475 Directing II**

  **Prerequisites:**
  THETR-375 or instructor's consent

  **Credits:**
  4.00

  **Description:**
  Directing II focuses on the development of an individual directorial point of view and explores a variety of theoretical and applied approaches to cultivating interpretive skills. The course also examines how the director reconciles traditional theatrical conventions and techniques with the ability to create fresh, innovative and personal results. Students will stage weekly theatrical responses to class readings in addition to creating a fully-realized final directing project.
THETR-477 Playwriting II

Prerequisites:
THETR-377 or instructor's consent

Credits:
4.00

Description:
Playwriting II is a continuation, deepening and thickening of the principles learned in Playwriting I. A course designed for dedicated writers, students are expected to explore a wide variety of playwriting challenges, skills and techniques. Student works will be regularly shared and discussed in class. Students will also be assigned plays by recognized playwrights to discuss and analyze in class. Playwriting II students are encouraged to participate in PlayDay!", an annual reading of new student-written plays. Normally offered alternate years.

Term:
Occasional

THETR-481 Arts Administration II

Prerequisites:
THETR 491

Credits:
4.00

Description:
In this course, we will see how the administrative functions discussed in Arts Administration I work in different kinds of arts organizations. Using actual cases from the world of performing and visual arts, we will explore the operations for profit and non-profit arts producers and presenters, art service organizations, and many kinds of funding institutions. We will also discuss various approaches to arts administration in an international context. The course may include an internship with an arts organization in Boston.

THETR-488 Professional Internships

Prerequisites:
instructor's consent and internship availability required

Credits:
1.00- 4.00

Description:

This course provides students with the opportunity to receive credit for their work on an approved internship assignment in the professional performing and visual art world. At the successful completion of the internship, students will be required to submit a written analysis of their experience as well as a journal documenting the daily events of their project. Professional internships are difficult to secure. Interested students are advised to contact members of the Theatre Department faculty at least one semester in advance to facilitate this opportunity.

Term:

Offered Both Fall and Spring

- **THETR-489 Performance Studies**

  Credits:

  4.00

  Description:

  This course provides an overview of the modern concept of performance and how it has evolved in a variety of interdisciplinary fields. Encompassing the areas of dance, music, theatre, installation work, 'happenings' and spectacles, students will explore the ways performance is understood by ethnographers, anthropologists, linguists, cultural theorists, social scientists, and artists. Using the theoretical base covered during the semester, students will conceive, develop, and present a final performance piece appropriate to their chosen discipline.

  Term:

  Occasional

  Type:

  Humanities & History, Humanities Literature Requirement

- **THETR-507 Senior Honors Project**

  Prerequisites:

  Instructor's consent required

  Credits:

  0.00- 4.00

  Description:

  Theatre majors who have demonstrated academic excellence and involvement in department productions may propose to work with a faculty advisor during their senior year to focus intensively on a specific area of interest to prepare for graduate school and the professional world. Options include: a production, a research project, a professional internship, an experiential service learning project, a senior honors portfolio, or a self-defined
independent project. Successful completion of this course confers departmental honors to graduating Theatre majors.

Term:
Offered Both Fall and Spring

- THETR-508 Capstone Experience

  Credits:
  0.00

  Description:

  The capstone experience demonstrates a student's high level of practical and/or academic facility and prepares them for their transition into the world of professional theatre and graduate school. Upper Level production activities within the theatre department that may fulfill this requirement are directing, designing, stage managing, acting a major role, playwriting, or some special approved project. Students may also fulfill this requirement by completing a Senior Honors Thesis.

- THETR-510 Independent Study

  Prerequisites:

  Instructor's consent required

  Credits:

  1.00- 8.00

  Description:

  Variable credits for approved projects outside the classroom. Since all independent studies must be approved by the Dean's Office, all interested students must be able to persuasively articulate their proposal in writing and include both an annotated reading list and a schedule of meetings with faculty supervisors.

  Term:

  Offered Both Fall and Spring

- THETR-511 Professional Development

  Prerequisites:

  Theatre majors or minors only.

  Credits:

  1.00

  Description:
This course is designed to give students the tools to plan for and support a career path after graduation. Students will acquire effective business skills, learn the importance of proactivity and self-reliance, and develop strategies for establishing and sustaining professional networks of support. Students will also learn how to execute effective interviewing techniques, gain insight concerning personal strengths and weaknesses, and acquire life-long learning skills in order to begin their professional careers with defined strategic goals that will support their aspirations. Master Classes with professional theatre artists and field trips to professional theatres will also be included.
Women's & Gender Studies

As an interdisciplinary program, the Women's & Gender Studies minor draws on insights and analytic tools from the arts, history, literature, media, and the social sciences. Students may enroll in Women's & Gender Studies courses for elective credit or as a minor.

There is no major available in Women's & Gender Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

- Minor Requirements
- Women's & Gender Studies Courses

Minor Requirements: 5 courses, 20 credits

Core Requirement (1 course, 4 credits)

Choose one of the following:

- WGS-111 Women, History, & Culture

  Credits:

  4.00

  Description:

  Explores the roles and images of women in Western culture and the realities of women's everyday lives through literature, film, history, art, psychology, and recent feminist scholarship. Analyzes gender inequalities and the influence of gender on social structure, human behavior, and artistic expression. Topics include: the social construction of gender and identity; domestic prescriptions for women; women and work; intersections of gender, class, and race in American society; sexualities and identity; the politics of motherhood and reproductive rights; educating girls; negotiating male privilege and structural inequalities; representations of women in Western art and film; and women as artists and gendered models of creativity in art, film, fiction, and science.

  Term:

  Offered Both Fall and Spring

  Type:
• WGS-113 Women, Science, & Society

Credits:
4.00

Description:
Explores women's lives from the perspective of the social and natural sciences, including examination of recent biological, psychological, and sociological theories about gender and gender roles, as well as the influence of feminist scholarship in these areas. Topics include: the social construction of gender; the psychology and biology of sex and gender; women and work; media representations of women; the female body and eating disorders; women's health and lifecycle; women and sexuality; reproduction, abortion, and motherhood; and sexual violence against women.

Term:
Offered Both Fall and Spring

Type:
Cultural Diversity Opt A, Social Science, Diverse Perspectives

• WGS-115 Introduction to Gender Studies

Credits:
4.00

Description:
Introduces the key topics and debates that have shaped the field of gender studies, including queer studies, masculinity studies, and women's studies. Through lecture and class discussion of texts from literature, film, history, psychology, and sociology, explores the pervasive influence of gender on the structure of society and our everyday experiences and the role that gender plays in our understanding of love, friendship, sexuality, and even violence. Topics include: biological arguments about gender and sexuality; the social construction of gender and identity; intersections of gender, race, class, and sexuality; masculinity and femininity; and theories of sexual difference and the construction of sexuality.

Term:
Occasional

Type:
Cultural Diversity Opt A, Diverse Perspectives, Humanities & History

Electives (4 courses, 16 credits)
Choose four of the following courses, with no more than two from any single department except Women's & Gender Studies (WGS). Students who have taken WGS-111 or WGS-113 may take WGS-115 (Introduction to Gender Studies) as one of their four elective courses for the WGS minor.

- **ALS-391 Domestic Violence, Abuse & Neglect**

  **Prerequisites:**
  
  Take ALS-264 or ALS-360; or instructor's permission

  **Credits:**
  
  4.00

  **Description:**
  
  An opportunity to learn the history of domestic violence including battering, child abuse and child neglect, and the legal response to it. Focus will be on Massachusetts Law and its response, especially the Abuse Prevention Act, its application and enforcement, and on laws protecting children from abuse and neglect. Filings, law office issues and special issues in dealing with battered women and abused and neglected children will be included with the psychological issues, cultural issues, and advocacy possibilities. Normally offered yearly. Sophomore status required. Cultural Diversity A

  **Type:**
  
  Cultural Diversity Opt A, Diverse Perspectives

- **ARH-205 Gender, Class and Alterity in Ancient And Medieval Art**

  **Credits:**
  
  4.00

  **Description:**
  
  Explores issues of sexuality, gender, race, and social class in the ancient and medieval worlds. Examines key artworks from ancient Greece, the Roman Empire and medieval Europe within historical, social and cultural contexts.

  **Type:**
  
  Diverse Perspectives, Vis. & Perform Thry & Hst

- **ARH-321 Women, Art & Society**

  **Credits:**
  
  4.00

  **Description:**
  
  Surveys women artists from the sixteenth century to the present and examines new direction in art-historical scholarship developed by feminist art historians during recent decades.
• **CJN-217 Gay and Lesbian Studies**

  Credits:

  4.00

  Description:

  Examines the portrayal of homosexuality in political, social, and cultural discourse. Analyzes the role of media and symbolic construction in the shaping of public values, opinions, and social movements.

  Term:

  Alternates Fall & Spring

• **ENG-356 Whitman and Dickinson**

  Prerequisites:

  WRI-102 or WRI-H103

  Credits:

  4.00

  Description:

  An investigation of the lives and works of two of nineteenth-century America's greatest and most original poets. Topics will include types of poetic language and formal structure, the work of the poetic imagination in transforming observations of the world into art, and the ways in which poets process the idea of death and the reality of war. Finally, this course examines Whitman and Dickinson's impact on American popular culture as well as on the writings of modern poets and literary critics.

  Term:

  Occasional

• **ENG-387 Writing Women**

  Prerequisites:
WRI-102 or WRI-H103

Credits:

4.00

Description:

This course studies 19th and 20th century women writers and questions the type of women who write, what they write about, and why they write. Themes we examine include domesticity, assimilation, and madness. Authors studied in the past have included Edith Wharton, Willa Cather, Anzia Yezierska, Nella Larsen, and Sylvia Plath. Normally offered alternate years. Cultural Diversity A

- GVT-306 Women & Public Policy

Credits:
4.00

Description:
This hybrid course will examine the political leadership and influence of women within political institutions and on public policy. The course is divided into two parts: Part 1 will examine women in politics, with particular attention given to the intersectional realities of race, class, gender identity, and ideological orientation. Specific policy areas, including reproductive choice, housing, pay equity, and domestic relations, will be discussed in Part 2. Prerequisite: Open to non-majors; not open to freshmen. Normally offered alternate years. Cultural Diversity A

Type:
Social Science,Cultural Diversity Opt A,BSJ SOCIAL SCIENCE

- GVT-307 Globalization of Gender Politics

Prerequisites:
Not open to freshmen

Credits:
4.00
This course examines the interaction between gender and globalization. It discusses the centrality of gender in international development by focusing on gender as one of the most critical factors that affect the success or the failure of globalization. Critically reviewing general theories of globalization, the course presents a historical overview of gender and development. It then explores selected topics: global restructuring and feminization of the labor force, gender in multinational corporations, gender and international migration, sex-tourism, AIDS, and the impact of the state, religion, and culture in creating social dislocations and inequalities. Finally, we will consider strategies of change and diverse forms of resistance by women. Offered as needed. Cultural Diversity B

Cultural Diversity Opt A, Humanities & History, Humanities Literature Requirement, BSBA SOCIAL CHANGE, D

- HST-471 Self, Body, & Sexuality- U.S. History

This course examines American debates over the natures, capacities, and responsibilities of men and women from settlement of the New World through the present. Emphasis is given to three elements of the self: social and civic personhood, the body, and sexuality. We will focus on representations of womanhood and masculinity - across racial, ethnic, and class lines - and their effects on men and women in society, politics, and at law. Course readings will also examine concepts of human nature and the interplay among mind, body, and sexuality.

Term:
Occasional

Type:
Humanities & History, Humanities Literature Requirement

- HST-484 History of the Emotions

Explores ideas about emotional life from the fields of history, anthropology, sociology, and psychology as well as the evolution of emotion rules and prescriptions, focusing on western Europe and the United States since 1700. In the eighteenth century, emotions were seen as a positive influence on politics and public life, especially during the
French Revolution. After the fall of Robespierre, the emotions were banished to the private sphere - so we will read both primary sources and recent scholarship on 19th- and 20th- century ideas about masculinity and femininity, romantic love and marriage, childrearing, and about what parents and children are supposed feel toward each other, how ideas about these subjects have changed over time, and whether our feelings change with them.

- **SF-1135 Women Warriors: Stories of Captivity, Conversion, and Confession**

  Credits:

  4.00

  Description:

  Since the beginning of time, women have been doing battle to themselves, while men have gone to battle against others. Whether it is through converting to Christ, yielding to captors in order to survive, or carrying a baby, this course introduces students to the many ways in which, whatever battles they face, women are warriors; they survive. Utilizing an array of captivity, conversion, and confession narratives by women, and pairing them across the centuries, students will make connections and draw conclusions between early-and mid-19th-century-American and contemporary women. Students will connect, for example, the trials of the 17th-century Puritan captive, Mary Rowlandson, and contemporary hostage, Elizabeth Smart, to explore how women (no matter how different they seem) draw upon unique inner resources to survive.

- **SOC-222 Women in Struggle on Film**

  Credits:

  4.00

  Description:
Women's struggles in arenas from war to labor disputes will be examined through films and writings. Societal, historical and cultural contexts of women's roles in films are discussed drawing on film criticism and sociological analyses.

Term:
Occasional

• SOC-230 Bad Girls

Credits:
4.00

Description:
This class explores the images of the traditional bad girl in films. The course examines the idea of moving beyond merely the delinquent, many images in film suggest that girls and women who break with the socially condoned role of femininity are somehow bad. Girls and women who have power or challenge authority are often portrayed in films as deviant and therefore bad. Girls and women who are frigid are just as bad as their sexually promiscuous silver-screen opposites. This course further focuses on the impact of these images on real life social roles for girls and women as well as the symbiotic relationship between fact and fiction.

Term:
Occasional

Type:
Cultural Diversity Opt A

• SOC-239 Men and Violence

Credits:
4.00

Description:
An exploration of the nature of masculinity and its connection to interpersonal and collective violence in American society. The course focuses on the emotional, spiritual, social and cultural roots of the crisis of boyhood and masculinity as a context for and consequence of violence.

Term:
Occasional

Type:
Cultural Diversity Opt A

• SOC-273 Women in Contemporary Society
Description:

A critical analysis of theory and research related to the socialization, roles and social participation of women in contemporary society.

Term:

Occasional

- **SOC-275 Women and Crime**

  Credits: 4.00

  Description:

  This course examines the complex relationships between women and crime today. This focus will include women as criminal offenders; women as victims of crime; and women as both offenders and victims. Course materials draw from recent feminist scholarship on these issues in the social sciences. Topics include the causes of women's crime, drugs, and crime; child abuse and trauma; prostitution and sex trafficking; race, gender and victimization; and feminist social movements against violence. Crimes of violence against women are a central focus in the course.

  Term:

  Occasional

  Type:

  Cultural Diversity Opt A

- **SOC-276 Sex and Society**

  Credits: 4.00

  Description:

  An examination of human sexuality as experience and institution. Sexuality is considered in relationship to power, love, religion, family, race, gender, sexual orientation, violence and courtship.

  Term:

  Occasional
SOC-303 How Pocahontas Lives: the Health of Native American Women and Girls

Credits:
4.00

Description:
Native American women and girls experience many threats to their well-being: polluted environments, violence, and the continuation of colonial practices mean that their lives are at risk. Dominant political, economic, and cultural norms do little to protect them. Yet Native American women and girls can and do assert their right to well-being as they choose to define it, achieving health and self-determination. This class will examine the indigenous women and girls of the United States, to consider the continued impact of colonialism on women's health and the role of self determination in creating opportunities for the improvement of Native American women's health.

SOC-322 Tough Guise

Credits:
4.00

Description:
Representations of masculinity in contemporary societies are examined in terms of their social sources and consequences. Images and scripts for doing masculinity are explored through case studies of film, television, sports, advertising, comic books, video games, music and other media that define what it means to be a man.

Term:

  Type:

  Cultural Diversity Opt A

• **WGS-220 Other Worlds, Other Genders: Women and Science Fiction**

  Credits:

  4.00

  Description:
Examines through both classic and contemporary science fiction a variety of possibilities for world-reimagining in the realms of gender, sexuality, race, and other forms of difference. Draws on theories of utopian and dystopian discourse, engages with questions of biology and reproduction, and explores colonialism through first-contact and space empire narratives.

Type:

Humanities Literature Requirement

- **WGS-311 Engendering Entertainment: Feminism and Popular Culture**

  Credits:
  4.00

  Description:
  
  Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today’s popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey’s Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy’s Female Chauvinist Pigs, and Caitlin Moran’s How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

  Type:

  Cultural Diversity Opt A, Humanities & History

- **WGS-315 Feminist Thought**

  Credits:
  4.00

  Description:
  
  Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldúa, and Judith Butler.

  Type:

  Cultural Diversity Opt A, Diverse Perspectives

- **WGS-325 Global Women's Fiction**
Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

Term:
Occasional

Type:
Humanities Literature Requirement, Cultural Diversity Opt B, Diverse Perspectives

- WGS-335 Queer Narratives

Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, Paris Is Burning”, Frank Ocean's 2012 album, Channel Orange”, and Janet Mock’s recent memoir, Redefining Realness”, as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

Type:
Diverse Perspectives, Humanities & History

WGS Track Courses (1 course, no more than 4 credits)

Some CAS courses can be taken to fulfill the WGS minor by registering for the optional WGS track of that course. Students who register for this track and complete the required WGS readings and assignments may count a maximum number of one of these courses toward the minor in Women's & Gender Studies. In order to register for the WGS track of a listed course, students should consult the instructor and the director of the Women's & Gender Studies program no later than the first week of class.

- CJN-255 Introduction to Media

Credits:
4.00

Description:
An introduction to the role of media in contemporary society, focusing on media's influence on cultural, political, and ideological processes. An examination of the historical contexts within which newspapers, radio, television, and new media technologies develop, and how audiences interact with and influence the use of media.

Term:
Offered Both Fall and Spring

Type:
Social Science

- **CJN-385 Globalization of Media and Telecommunications**

  Credits:
  4.00

  Description:
  A critique of the circulation of media goods and ideologies from both a cultural and political/economic perspective. Topics include global Hollywood, the images of Muslim women in transnational media, the information society, and global social movements.

  Term:
  Offered Spring Term

  Type:
  Cultural Diversity Opt B, BSBA SOCIAL CHANGE, Diverse Perspectives

- **ENG-353 Dwelling in American Realism**

  Prerequisites:
  WRI-102 or WRI-H103

  Credits:
  4.00

  Description:
  In-depth exploration of American Realism from the post-Civil War era to the pre-WWI era (roughly 1875 to 1915). Particular emphasis is given to the role of houses and material and consumer culture in the forging of American identity. Authors may include Howells, Twain, James and Wharton among others. Normally offered alternate years. Students will also visit authors' houses in the Boston area. This course requires prior approval in order to
count towards the Women's and Gender Studies Minor. Students should consult with the instructor and the
director of the WGS Minor no later than the first week of classes.

Term:
Occasional

- **ENG-392 Readings in Post-Colonial Literature**

  **Prerequisites:**
  WRI-102 or WRI-H103

  **Credits:**
  4.00

  **Description:**
  An Exploration of Post-colonial literature and how the empire writes back following the collapse of European colonialism. Special emphasis will be placed on the legacy of British Colonial rule and the contemporary use of literature and the English Language to both resist and problematize Eurocentric cultural assumptions. Authors studied will include E.M. Foster, Salman Rushdie, J.M. Coetzee, Anita Desai, Hanif Kureishi, and Zadie Smith, among others. Students will be introduced to Post-colonial critical theory and view film adaptations of literary texts.

  Term:

  Type:
  Cultural Diversity Opt B

- **ENG-409 Literary Bloomsbury: Woolf and Forster**

  **Prerequisites:**
  WRI-102 or WRI-H103

  **Credits:**
  4.00

  **Description:**
  This class will engage with the major novels and selected literary writings of two of the twentieth century's most important modernist voices, Virginia Woolf and E.M. Forster. We will approach their writings within the intellectual framework of British modernism and the cultural context of the Bloomsbury Group out of which they emerged. Special attention will be paid to their theoretical writings on fiction as well as their respective contributions to feminism and queer theory. The class will also view cinematic adaptations of certain novels and discuss how these films have contributed to the enduring appeal and status of these texts as classics of twentieth-century fiction.
• HST-426 Politics and Culture in Europe 1919-1939

Credits:
4.00

Description:
Explores the social and political development of European society between the two world wars, primarily through the literature, art, and films of the period. Topics include: the dissolution of pre-1914 middle class society; deviance and sexuality in the 1920s; the role of decadence in art and the Fascist response to deviance in life and art; women, workers, and the new technology; the rise of Fascism; political engagement and polarization throughout European society in the face of economic and social crisis.

• HST-489 Germany: Film, Politics, Memory Since 1945

Credits:
4.00

Description:
Explores German history since 1945 through film, newsreels and other archival footage, war memorials and museums, novels, published diaries, memoirs, and recent historical scholarship. Topics include the representation, in film and other texts, of: post-war rebuilding; the German Economic Miracle; divided Berlin; 1960s and 70s radical politics; coming to terms since 1945, with Germany's Nazi past and the Holocaust; coming to terms since 1990 with the Stasi and East German past; Ostalgie (nostalgia in the 21st century for some aspects of East German socialism); the multi-cultural society that is Germany today, with new Turkish, Greek, Russian, Arab, and even Israeli communities.

Type:
Humanities & History

• SOC-256 Sociology of Aging

Credits:
4.00
Description:

Consideration of the physiological, psychological and social factors associated with the aging process. Contemporary American values toward the elderly are compared and contrasted with historical and cross-cultural studies. Current opportunities and techniques enabling the elderly to enrich and expand their societal roles are explored.

Term:

Occasional

For the most current list of courses with an option WGS track, or for more information, contact the director of Women's & Gender Studies.

Advanced Topics

Students may wish to include specialized research and/or an internship as part of their minor program. They may do so by completing the following course under the supervision of the program director or a member of the Women's & Gender Studies Committee:

Residency Requirement Policy: In the College of Arts and Sciences, a two-course residency requirement must be satisfied for completion of a minor and a four-course residency requirement must be satisfied for the completion of a major.
Women's & Gender Studies

As an interdisciplinary program, the Women's & Gender Studies minor draws on insights and analytic tools from the arts, history, literature, media, and the social sciences. Students may enroll in Women's & Gender Studies courses for elective credit or as a minor.

There is no major available in Women's & Gender Studies.

Course descriptions may be updated periodically to reflect changes since the last published catalog.

Credits:
4.00

Description:
Explores visual representation of gender and sexuality in film, television, digital media, painting, and sculpture. Through readings in feminist thought and gay studies, by authors such as Kate Bornstein, Donna Haraway, David Halperin, Michel Foucault, and Lisa Cartwright, topics will include: the ways in which normality organizes gender and sexuality; effects of marginality for queer subjects of culture; popular representations of women and men, heterosexual and homosexual, gender and sexual minority subjects and their effect on our sense of ourselves; issues of identity, community, sexuality, power, and resistance; imagining alternative theories and practices in representing gender and sexuality in contemporary media culture.

• WGS-311 Engendering Entertainment: Feminism and Popular Culture

Credits:
4.00

Description:
Investigates the complex intersections between feminism and popular culture through several different lenses: by exploring how feminists make arguments about popular culture; by looking at the complexities of public femininity in today’s popular culture, including figures such as Lady Gaga and Katy Perry and television shows like The Bachelor and Grey’s Anatomy; by focusing on a variety of articulations of feminism within mass media, blogs, social media, and popular books such as Ariel Levy’s Female Chauvinist Pigs, and Caitlin Moran’s How to Be a Woman. Along the way we will ask questions about: what makes a work of art feminist; how modern media contributes to or distracts us from a variety of political debates in the realm of female equality and how can we, as individuals, use modern media to create and advance smart, feminist arguments.

Type:
Cultural Diversity Opt A, Humanities & History

• WGS-315 Feminist Thought

Credits:
4.00

Description:
Investigates how feminists, both today and in history, have understood inequality and difference and looked for the best ways to address these issues and bring about social justice. Examines how feminist theorists help us to understand how gender and other social categories, such as race, class sexuality, disability, age and nationality, are constructed within and through each other; and analyzes feminist engagements with liberalism, socialism, psychoanalysis, existentialism, post-colonialism, critical race theory, and queer theory, as well as consider anti-
feminist arguments. Readings include classic critical texts by authors including Mary Wollstonecraft, Emma Goldman, Virginia Woolf, Chandra Mohanty, Gloria Anzaldua, and Judith Butler.

Type:
Cultural Diversity Opt A,Diverse Perspectives

- **WGS-325 Global Women's Fiction**

  Credits:
  4.00

  Description:
  
  Explores of various cultural worldviews in order to reveal and assess the voices of women from around the world as they respond to important global issues such as sexual violence and gendered oppression. Topics include: national citizenship, sexual politics, legal discourse, aesthetic representation, literary movements, genre, constructions of femininity, sexual identities, and representations of gender in relation to race and class and international cultures, and the relationship of self-image to the body politic.

• **WGS-335 Queer Narratives**

  Credits:

  4.00

  Description:

  Explores the stories that help us to understand communities, identities, and bodies that could be considered queer, and the ways that film, music, memoir and fiction have discussed queer as different, unusual, or other. Texts include the documentary, *Paris Is Burning*, Frank Ocean's 2012 album, *Channel Orange*, and Janet Mock's recent memoir, *Redefining Realness*, as well as foundational queer theory from Judith Butler, Eve Kosofsky Sedgwick, and Lee Edelman, among others, to help build a framework for approaching and interpreting both fictional and non-fictional accounts of queer lives.

  Type:

  Diverse Perspectives, Humanities & History

• **WGS-340 Women on Stage**

  Credits:

  4.00

  Description:

  Examines the history of female portrayal on the Western stage including women in Shakespeare and other early modern plays (when female characters were played by men); in Restoration comedy; the works of Oscar Wilde and George Bernard Shaw; and 20th and 21st century depictions of women on stage, including in the works of authors such as Lillian Hellman, Lorraine Hansberry, Caryl Churchill, Paula Vogel, Suzan-Lori Parks, Rebecca Gilman, and Sarah Ruhl. Students develop familiarity with key concepts in performance theory including catharsis, Brecht's alienation effect, and the distinction between performance and the performative.

- **CHIN-211 Survey of Chinese Literature and Culture I**

  Credits:

  3.00

  Description:

  This is an introductory and interdisciplinary course on Chinese civilization and traditional Chinese literature. It will provide the student with a brief introduction to the cultural legacy and literature of China from the archaeological origins of Chinese civilization to the present time. The diverse origins of China's civilization are stressed as topics in political, social, and economic history are explored, with a focus on developments in language, literature, and art. This course is a good introduction to further study of Chinese history and culture and, in particular, provides a valuable context for themes treated in Modern China.

- **CHIN-510 Independent Study**
